SECTION ONE

Introduction

1.0 Data on household consumer expenditure were collected in every round of National Sample Survey (NSS) beginning from the first round (1950-51) to the 28th round (1973-74). After the 26th round of the survey, the Governing Council of NSSO decided that the survey on consumer expenditure and employment-unemployment might be undertaken together once in five years. Accordingly quinquennial surveys on consumer expenditure and employment & unemployment were conducted in the 27th, 32nd, 38th and 43rd rounds of NSS. Both the survey schedules - sch.1.0 & sch.10 - were canvassed in the same set of sample households in these rounds.

1.1 Meanwhile, a need was felt by planners and research workers for an annual series of data on consumer expenditure. Therefore, it was decided to canvass a slightly abridged schedule in every round (except the quinquennial rounds) with a small sample of only 2 households per sample village/block, starting from NSS 42nd round onwards. Again from the 45th round, it was decided to extend the scope of the annual survey to cover some indicators on employment-unemployment as well. For this purpose some key questions on the current and usual activity status of the household members were introduced in the demographic block of the schedule.

1.2 The present report gives the results of the annual survey on consumer expenditure and employment-unemployment carried out in the 48th round during January-December 1992.

1.3 This report contains four sections including this introductory section and two appendices. Section Two gives, in brief, the sample design and the estimation procedure of the survey. Section Three presents the results on consumer expenditure including the main concepts and definitions adopted for the survey and Section Four discusses the results on employment & unemployment along with their concepts and definitions. Appendix I gives the results in detail for both consumer expenditure and employment & unemployment.

1.4 The survey period of the 48th round was from January to December 1992. The geographical coverage of the survey was to be the whole of the Indian Union except Ladakh and Kargil districts of Jammu & Kashmir, 768 interior villages of Nagaland and 172 villages in Andaman & Nicobar Islands which remain inaccessible throughout the year. However, certain districts of Jammu & Kashmir viz., Anantnag, Pulwama, Srinagar, Badgam, Baramula and Kupwara had to be excluded from the survey coverage due to unavoidable circumstances.

1.5 Overall, 4328 sample villages, 3484 sample blocks and 13624 sample households (at the rate of 2 households per sample village/block) were selected for the survey in the 48th round for sch.1.0.

1.6 The monthly per capita expenditure (MPCE) classes for which estimates are presented at all-India level in this report are the same as those adopted in the last quinquennial round, i.e. 43rd round. They are (in Rs.) :

	Rural	Urban
1.	less than 65	less than 90
2.	65 - 80	90 - 110
3.	80 - 95	110 - 135
4.	95 - 110	135 - 160
5.	110 - 125	160 - 185
6.	125 - 140	185 - 215
7.	140 - 160	215 - 255
8.	160 - 180	255 - 310
9.	180 - 215	310 - 385
10.	215 - 280	385 - 520
11.	280 - 385	520 - 700
12.	385 & above	700 & above
13.	all classes	all classes

For comparability between rural and urban data, estimates are also presented by the following broader pooled MPCE classes for both sectors, rural and urban :

1. less than 110
2. 110 - 215
3. 215 - 385
4. 385 & above
5. all classes

SECTION TWO

Sample Design & Estimation Procedure

2.0 The principal subjects of enquiry in the 48th round were "Land and Livestock Holdings" and "Debt & Investment". In addition, the regular annual survey on consumer expenditure and employment-unemployment was carried out with two sample households per village/block.

2.1 **Sample Design** : A stratified two-stage sampling design was adopted for the survey with the first stage units as census villages for rural areas and the Urban Frame Survey blocks for urban areas. Households formed the second stage units in both rural and urban areas.

2.2 **Sampling frame for fsu's** : In the rural sector, the sampling frame in most of the strata was the 1981 census list of villages. However, in Assam, where the 1981 census was not undertaken, and in a few districts of other states, where the available list as per 1981 census was incomplete, the 1971 census list of villages was used. In the urban sector, the sampling frames used in most cases were the lists of NSS Urban Frame Survey (UFS) blocks. However, the 1991 census house listing enumeration blocks were considered as the sampling units for some of the new towns declared as urban areas in the 1991 population census.

2.3 **Stratification** : Each state/union territory (u.t.) was divided into one or more agro-economic regions by grouping contiguous districts which are similar with respect to population density and crop pattern. In Gujarat, however, some districts were sub-divided for the purpose of region formation on the basis of location of dry areas and the distribution of tribal population in the state. The total number of regions formed in the whole of India was 78.

In the rural sector, within each region, each district with a rural population of less than 1.8 million according to the 1981 census formed a single basic stratum. Districts with larger population were divided into two or more strata, depending on population, by grouping contiguous tehsils, similar as far as possible in respect of rural population density and crop pattern. In Gujarat, however, in the case of districts extending over more than one region, the portion of a district falling in each region constituted a separate stratum even if the rural population of the district as a whole was less than 1.8 million. Further, in Assam, the strata formed for the earlier NSS rounds on the basis of 1971 census rural population exactly in the above manner, but with a cut-off of 1.5 million population, were retained as the strata for rural sampling.

In the urban sector, strata were formed, again within NSS regions, on the basis of 1981 (1991 in some of the new towns) census population of towns. Each city with a population 10 lakhs or more formed a separate stratum by itself. The remaining towns of each region were grouped to form three different strata on the basis of 1981 (1991 in a few cases) census population. The strata were formed as detailed below :

Composition of Urban Strata

stratum number	population size class of towns
(1)	(2)
1.	all towns with population less than 50,000
2.	all towns with population 50,000 - 199,999
3.	all towns with population 200,000 - 999,999
4.	each city with population 1 million and above

2.4 **Allocation of sample** : A total all-India sample of 6812 first stage units (4328 villages and 2484 urban blocks) - determined on the basis of investigator strength in different states/ u.t.'s and the expected workload per investigator - was first allocated to the states/u.t.'s in proportion to central field staff available. The sample thus obtained for each state/u.t. was then allocated to its rural and urban sectors considering the relative sizes of the rural and urban population with almost double weightage for the urban sector. Within each sector of a state/u.t., the allotted sample size was re-allocated to the different strata in proportion to stratum population. All allocations were adjusted so that the sample size for a stratum was at least a multiple of 4 for the rural and urban sectors separately. This was done in order to have equal-sized samples in each sub-sample and sub-round. The only exception was Daman & Diu for which the first stage rural sample consisted of 2 villages.

2.5 **Selection of FUS's** : The selection of sample villages was PPS circular systematic with population as size variable, in the form of two independent sub-samples. The sample blocks were selected circular systematically with equal probability, also in the form of two independent sub-samples.

2.6 **Arunachal Pradesh:** For the rural areas of Arunachal Pradesh, a cluster sampling procedure was followed. The field staff were supplied with a list of sample "nucleus" villages and were advised to select clusters of villages - building up each cluster around a nucleus village - according to prescribed guidelines. The nucleus villages were selected circular systematically with equal probability, in the form of two independent sub-samples.

2.7 **Selection of hamlet-groups/sub-blocks** : Large villages and blocks were divided into a suitable number of hamlet-groups and sub-blocks respectively having more or less equal population content. Two hamlet-groups were then selected from large villages, whereas only one sub-block was selected from the large blocks.

2.8 **Selection of households** : From each fsu, two sample households were selected for the survey on consumer expenditure & employment-unemployment, i.e., for sch.1.0, using circular systematic sampling from the frame of all households in the village/urban block (surveyed hamlet-groups/sub-block).

2.9 **Visits and sub-rounds** : To reduce recall error in data on land and livestock holdings and debt and investment, each sample village/block was visited twice during the reference period (with an average interval of six months between the two visits). Of the two households selected for sch.1.0, one was surveyed during the first visit and the other during the second visit. Also, the survey period was divided into two sub-rounds, sub-round 1 containing the first half of the first visit survey period and the first half of the second visit survey period, and sub-round 2, the second half of the survey period for each visit. One-half of the sample villages/blocks in each stratum were surveyed during sub-round 1 and the other half during sub-round 2.

2.10 **Sample size** : In all, the survey covered 13132 households spread over 6650 sample villages/blocks. The number of sample villages and blocks allotted and surveyed, and the number of sample households and persons surveyed, are given for different state/u.t.'s and all-India in Statement 0, separately for rural and urban sectors.

STATEMENT 0: NUMBER OF VILLAGES/BLOCKS ALLOTTED AND SURVEYED AND NUMBER OF SAMPLE HOUSEHOLDS AND PERSONS SURVEYED

state/u.t.	no. of villages		no. of blocks		no. of hhs surveyed		no. of persons surveyed	
	allotted	surveyed	allotted	surveyed	rural	urban	rural	urban

Pondicherry	16	16	12	12	30	24	134	133
All-India	4328	4231	2484	2419	8324	4808	44375	23650

* 18 nucleus villages were allotted for Arunachal Pradesh(rural). The original allocation showed 72 villages for Arunachal Pradesh; this was worked out on the basis of 4 villages per cluster selected. The actual number of villages selected came to 89. Thus the North-Eastern and all-India figures given here in col.(2) differ by 17 (=89-72) from the original allocation.

2.11 Estimation Procedure : The estimation procedure adopted in the 47th round of NSS for schedule 1.0 is given below. Denoting by $\hat{Y}$ the estimate of the aggregate of any characteristic Y, the estimation formula for $\hat{Y}$ is given by :

$$\hat{Y}=\sum_{s}\frac{P_s}{n_s}\sum_{i}\frac{D^*_{si}H_{si}}{C_{si}p_{si}h_{si}}\sum_{j=1}^{h_{si}}y_{sij}$$

for states/u.t.'s other than Arunachal Pradesh in the rural sector; by

$$\hat{Y}=\sum_{s}\frac{N_s}{n_s}\sum_{i=1}^{n_s}\frac{H_{si}}{h_{si}}\sum_{j=1}^{h_{si}}y_{sij}$$

for Arunachal Pradesh in the rural sector; and by

$$\hat{Y}=\sum_{s}\frac{N_s}{n_s}\sum_{i=1}^{n_s}\frac{D_{si}H_{si}}{h_{si}}\sum_{j=1}^{h_{si}}y_{sij}$$

for all states/u.t.'s in the urban sector; where

s : Stratum suffix,
i : sample village/block suffix,
j : sample household suffix,
P : total frame population of the stratum in rural sector,
p : population of sample village (used for selection),
N : number of villages in the frame in Arunachal Pradesh or number of urban blocks in frame for a stratum,
n : number of sample village/blocks surveyed,
H : number of households listed in the frame,
h : number of sample households,
D* : = 1, if D = 1,
= D/2 if D > 1,
D : number of hamlet-groups/sub-blocks formed,
C : number of census villages surveyed in a revenue villages,
Y : observed value of characteristic under study.

2.12 **Estimates of ratios** : The estimate of a ratio of the form

$$R = Y/X$$

where Y and X are the population totals of the values of two characters, is given by

$$\hat{R} = \hat{Y} / \hat{X}$$

where Y and X are obtained using the formula for estimation of total at the level at which R is required. That is to say, if $\hat{R}$ is required at state level, $\hat{Y}$ and $\hat{X}$ are first obtained at state level and then $\hat{R}$ is obtained by division. Examples of ratio estimates are rates and percentages.

SECTION THREE

Summary of findings : Consumer Expenditure

3.0 The survey findings of the enquiry on consumer expenditure are summarised in this section. Most of the results presented here relate to household monthly per capita consumer expenditure (MPCE) and its pattern of variation over the country. Distributions of households and persons over different classes of MPCE for rural and urban India are first discussed, as well as the inter-state variation in these distributions. Average MPCE for different states within rural and urban sectors and its absolute and percentage composition in terms of expenditure on different items of consumption are also presented in some detail; the variation in the composition of MPCE over different levels of living is also outlined.

3.1 The important definitions adopted for the survey are given below. Broadly, they are the same as followed in recent earlier rounds.

CONCEPTS AND DEFINITIONS

3.2 **Household** : A group of persons normally living together and taking food from a common kitchen constitutes a household. The word "normally" means that temporary visitors are excluded but temporary stay-aways are included. Thus a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. "Living together" is usually given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include the person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc. is considered as a single-member household except that a family living in a hotel (say) is considered as one household only; the same applies to residential staff of such establishments.

3.3 **Adult** : The term refers to a person who has completed 15 years of age.

3.4 **Household size** : The size of a household is a count of the total number of persons in the household.

3.5 **Household consumer expenditure** : The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. The household

consumer expenditure is the total of the monetary values of consumption of various groups of items namely (i) food, pan (betel leaves), tobacco, intoxicants and fuel & light, (ii) clothing and footwear and (iii) miscellaneous goods and services and durable articles.

For groups (i) and (ii), the total value of consumption is derived by aggregating the monetary value of goods actually consumed during the reference period. An item of clothing and footwear would be considered to have been consumed if it is brought into maiden or first use during the reference period. The consumption may be out of (a) purchases made during the reference period or earlier; (b) home grown stock; (c) receipt in exchange of goods and services; (d) any other receipt like gift, charity, borrowing and (e) free collection. Home produce is evaluated at the ex farm or ex factory rate. For evaluating the consumption of the items of group (iii) i.e. items categorised as miscellaneous goods and services and durable articles, a different approach is followed. In this case, the expenditure made during the reference period for the purchase of goods and services is considered as consumption.

It is pertinent to mention here that the consumer expenditure of a household on food items relates to the actual consumption by the normal resident members of the household and also by the guests whether during ceremonies or otherwise. To avoid double counting, transfer payments like charity, loan advance, etc. made by the household are not considered as consumption for items of groups (i) and (ii), since transfer receipts of these items have been taken into account. However, the item "cooked meals" is an exception to the rule. Meals prepared in the household kitchen and provided to the employees and/or others would automatically get included in domestic consumption of employer (payer) household. There is a practical difficulty of estimating the quantities and values of individual items used for preparing the meals served to employees or to others. Thus, to avoid double counting, cooked meals received as perquisites from employer household or as gift or charity are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for consumption of the normal resident members and for guests and employees will also be recorded in the purchaser household.

This procedure of recording cooked meals served to others in the expenditure of the serving households only leads to bias-free estimates of average per capita consumption as well as total consumer expenditure. However, as the proportions of donors and recipients of free cooked meals are likely to vary in opposite directions over the expenditure classes, the nutritional intake derived from the consumer expenditure survey data may present a somewhat distorted picture. These derived nutrition intakes may get inflated for the rich (net donors) and somewhat understated for the poor (net recipients). This point has to be kept in mind while using the NSS consumer expenditure data for any nutritional studies relating to the nutritional status of households.

3.6 **Broad groups of items** : Results on break-up of MPCE on different items of consumption are presented for 21 broad item groups. These are (1) cereals (2) gram (3) cereal substitutes (4) pulses & pulse products (5) milk and milk products (6) edible oil (7) meat, fish & egg (8) vegetables (9) fruits & nuts (10) sugar (11) salt (12) spices (13) beverages, refreshments & processed food (14) pan, tobacco & intoxicants (15) fuel & light (16) clothing (17) footwear (18) miscellaneous goods and services (19) durable goods (20) rent (21) taxes. Apart from these, sub-totals of MPCE on (a) food and (b) non-food are also provided.

3.7 **Milk and milk products** : This includes ghee, butter, curd and ice-cream etc. but excludes consumption of sweetmeats (pera, rosogolla etc.) even if their main constituent is milk and even if the milk is transformed into the sweetmeat in the household itself; such sweetmeats come under "beverages etc." i.e, "beverages, refreshments and processed food".

3.8 **Miscellaneous goods and services** : This is a residual group containing items other than food, pan, tobacco, intoxicants, fuel and light, clothing, footwear, rent, taxes and durable goods.

3.9 **Durable goods** : This term refers to durable goods apart from clothing and footwear; items included here are distinguished from miscellaneous goods by having a longer expected lifetime of use (roughly, one year or more). Expenditure incurred on repairs and construction of durables used for domestic purpose is included here.

3.10 The major findings of the survey on consumer expenditure are now discussed. In addition to the tables in the Appendix, a series of summary tables or statements, numbered 3.1 to 3.12, are included in the text for ready reference. State-level results are provided for 15 major states while the remaining states and union territories of India are divided into three groups - called North-Eastern, North-Western and Southern - for the purpose of presentation of estimates. These groups have been formed as follows :

North-Eastern : Arunachal Pradesh, Manipur, Meghalaya, Mizoram, Nagaland, Sikkim, Tripura.

North-Western : Jammu & Kashmir, Himachal Pradesh, Chandigarh, Delhi.

Southern : Andaman & Nicobar Islands, Dadra & Nagar Haveli, Goa, Daman & Diu, Lakshadweep, Pondicherry.

The term **"major states"** will be extensively used in the discussion which follows to mean the following states of India: Andhra Pradesh, Assam, Bihar, Gujarat, Haryana, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal. The abbreviation MPCE is used everywhere in preference to its expanded form : monthly per capita (consumer) expenditure.

3.11 Rural vs urban MPCE

3.11.1 An overall picture of rural-urban differences in consumption at the all-India level can be obtained from Statement 3.1.

STATEMENT 3.1 : PER THOUSAND DISTRIBUTION OF HOUSEHOLDS AND PERSONS, AVERAGE HOUSEHOLD SIZE AND MPCE BY BROAD MPCE CLASS IN RURAL AND URBAN AREAS

ALL-INDIA

MPCE class	no. per 1000 of hhs.		no. per 1000 of persons		average hh. size		average MPCE (Rs.)		no. of sample hhs.	
	R	U	R	U	R	U	R	U	R	U
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)
< 110	54	12	71	15	6.9	6.2	93	95	395	45
110 - 215	427	183	471	243	5.8	6.4	164	171	3356	819
215 - 385	373	361	344	391	4.8	5.2	276	291	3281	1797
≥ 385	146	444	114	351	4.1	3.8	600	690	1290	2147
all (including NR)	1000	1000	1000	1000	5.2	4.8	247	399	8324	4808

R : rural ; U : urban; hhs. : households.

Thus it may be seen that average rural MPCE during the period covered by the survey was Rs.247 and average urban MPCE was Rs.399 - about 61% higher. More than one-half (54%) of the rural population had MPCE below Rs.215, compared to only a quarter (26%) of the urban population. Again, MPCE exceeded Rs.385 for as many as 44% of urban households, but only 14% of rural households.

all - India

	percentage of households		percentage of persons	
	rural	urban	rural	urban
MPCE below Rs.215	48%	19%	54%	26%
MPCE above Rs.385	14%	44%	11%	35%

3.11.2 Average household sizes for households in four broad ranges of MPCE are also shown in Statement 3.1. Average household size for the rural sector as a whole is seen to be about 5.2 and for the urban sector, 4.8. For households in the lowest MPCE class - "less than 110" - average household size was as high as 6.9 in the rural sector and 6.2 in the urban sector.

3.12 **MPCE : inter-state comparison**

3.12.1 Distributions of rural and urban households and persons by MPCE class (a person's MPCE being understood as that of the household to which he/she belongs) are given in Statements 3.2 (R&U) and 3.3 (R&U) for each state and sector. The MPCE classification here is more detailed than in Statement 3.1. Averages of MPCE for each state are shown in column 15 of Statements 3.3R and 3.3U. For most major states, average state-level MPCE in the rural sector ranged between Rs.210 and Rs.350 and in the urban sector, between Rs.350 and Rs.470.

	rural		urban	
	average MPCE(Rs.)	no. of states	average MPCE(Rs.)	no. of states
average MPCE of 15 major states	190-250	9	280-325	2
	250-300	3	325-395	6
	300-400	3	395-470	7

3.12.2 Inter-state differences in MPCE distribution over the population may be studied by looking, for example, at the percentage of households or persons above or below a specific level of MPCE for each state. Such percentages may be derived from Statement 3.2/3.3. Thus it may be observed that Bihar had

percentage of rural population with MPCE Rs.180 or less	Bihar	56
	Orissa	48
	Madhya Pradesh	47
	Uttar Pradesh	46
	6 other major states	31-42
	Gujarat	29
	Rajasthan	26
	Kerala	19
	Haryana	12
	Punjab	6
	All-India	39

STATEMENT 3.2R : PER THOUSAND DISTRIBUTION OF HOUSEHOLDS OVER MPCE CLASSES BY STATES IN RURAL SECTOR

STATE	Monthly Per Capita Expenditure Class (in Rs.)													average hh. size	no. of households	
	00–65	65–80	80–95	95–110	110–125	125–140	140–160	160–180	180–215	215–255	255–305	305& above	all classes		estd. (00)	sample
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)	(13)	(14)	(15)	(16)	(17)
ANDHRA PRADESH	6	–	6	21	44	42	82	96	156	250	170	124	1000	4.6	112953	600

the highest proportion (56%) of rural population below the MPCE level of Rs.180 followed by Orissa, Madhya Pradesh and Uttar Pradesh (46-48%) and that relatively few people belonged to this category in Punjab (only 6%), Haryana (12%) and Kerala (19%). Likewise the percentage of rural population above the MPCE level of Rs.335 can be seen from Statement 3.4R to have been highest in Haryana (42%), Punjab (34%) and Kerala (27%), among the major states.

percentage of urban population with MPCE Rs.215 or less	Orissa	42
	Uttar Pradesh	41
	Bihar	40
	Karnataka	34
	Andhra Pradesh	32
	8 other major states	16-27
	Maharashtra	15
	Punjab	12

Some idea of inter-state variation in urban poverty can be obtained from state-wise percentages of urban population below a chosen MPCE level. For instance, it may be derived from Statement 3.3U that the highest percentages of urban population below the MPCE level of Rs.215 were reported by Orissa, Uttar Pradesh and Bihar (all above 40%) and the lowest by Punjab and Maharashtra.

3.13 Composition of MPCE by item group : all-India

3.13.1 At the all-India level, the break-up of MPCE over 21 item groups (cereals, pulses, clothing, etc.) is shown, separately for rural and urban sectors and separately for households in four broad ranges of MPCE, in Statement 3.4. The corresponding percentage distributions are shown in Statement 3.5.

3.13.2 Average monthly food and non-food expenditure per person in rural and urban sectors of India, which appear as sub-totals in columns (6) and (11) of Statement 3.4, are shown below along with expenditure on cereals, the most important food item group.

			all-India
monthly per capita expenditure on	rural(R) (Rs.)	urban(U) (Rs.)	difference (U-R) as % of R value
cereals	65	59	-9%
all food	161	224	+39%
all non-food	87	175	+100%
all items	247	399	+61%

It may be observed that urban monthly per capita expenditure on food items alone (Rs.224) was close to rural per capita expenditure on all items of consumption taken together (Rs.247). Non-food expenditure per person in urban areas was double that in rural areas while food expenditure per person was 39% higher and per capita expenditure on cereals was 9% (Rs.6) less in urban areas than in rural.

all-India : per capita expenditure over a 30-day period on selected item groups

item group	rural (Rs.)	urban (Rs.)
milk & milk products	23	42
vegetables	13	20
fuel & light	17	25
clothing & footwear	16	25
miscellaneous goods & services	35	83

3.13.3 Per capita rural and urban expenditure on a few other important item groups is shown above. It may be mentioned that for all item groups except "cereals" and "cereal substitutes", urban per capita levels of spending were higher than rural levels.

3.13.4 Statement 3.5 (columns (6) and (11)) shows that, as in earlier years, the proportion of household expenditure on food differed appreciably between rural and urban sectors (65% for

all- India : percentage of consumer expenditure accounted by major heads of consumption

item group	rural	urban
cereals	26%	15%
non-cereal food	39%	41%
all food	65%	56%
all non-food	35%	44%
all items	100%	100%

rural compared to 56% for urban). Again, as in earlier years, the difference was largely due to the higher proportion of MPCE being spent on cereals in the rural sector (26% compared to 15% for urban).

3.13.5 Apart from cereals, there was very little difference between sectors in shares of important item groups in total

all-India : percentage of consumer expenditure accounted by selected food and non-food item groups

item group	rural	urban
milk & milk products	9%	10%
vegetables	5%	5%
beverages, refreshments & processed food	7%	6%
fuel & light	6%	6%
clothing & footwear	4%	7%
miscellaneous goods & services	14%	21%

expenditure, a notable exception being the category "miscellaneous goods and services", which accounted for 21% of urban consumer expenditure compared to only 14% for rural.

3.14 **Consumption pattern at different consumption levels : all-India**

3.14.1 Statements 3.4 and 3.5 also bring out the differences in consumption pattern among households at different levels of consumption (MPCE) and show that in both sectors these differences were, as usual, more marked than differences, between say, the two sectors, or among states. Thus in the rural sector

rural

item group	30 days' per capita expenditure (Rs.) incurred by households in MPCE class (Rs.)			
	0-110	110-215	215-385	385 & above
cereals	41	60	73	79
fuel & light	9	14	20	29
meat,fish & egg	3	6	11	16
miscellaneous goods & services	8	17	38	116
milk & milk products	3	11	29	69
clothing & footwear	1	4	17	71

the population in the MPCE class "less than Rs. 110" spent only Re.1 per person per month on "clothing and footwear" and less than Rs.3 on "milk & milk products"; those in the class "Rs.385 & above", on the other hand, spent around Rs. 70 per person per month on both these item groups.

3.14.2 In the urban sector, as in the rural, average expenditure

all - India urban

item group	30 days' per capita expenditure (Rs.) incurred by households in MPCE class (Rs.)			
	0-110	110-215	215-385	385 & above
cereals	30	51	59	66
fuel & light	9	15	22	36
edible oil	6	11	19	30
miscellaneous goods & services	12	21	48	168
milk & milk products	5	14	32	73
rent	1	3	8	30
clothing & footwear	1	3	10	59

per person can be seen to rise steeply as one moves from low MPCE ranges to higher ranges for such item groups as "clothing & footwear", "rent", "miscellaneous goods and services", and "milk & milk products", and more gradually for "fuel & light ", "edible oil" and "vegetables". For cereals, per capita expenditure is only Rs. 30 in the class "less than 110" compared to Rs.51 for the next class, but rises much more slowly thereafter, reaching only Rs. 66 for the highest class.

3.14.3 Statement 3.5 shows percentage shares of specific item groups in total consumer expenditure to be increasing, in both sectors, for such groups as "clothing & footwear", "miscellaneous goods and services" and "milk & milk products", and declining for others, such as "cereals", "fuel & light", and "vegetables,", as one moves from lower MPCE levels to higher. As MPCE levels rise, the share of food items as a whole declines and that of non-food items rises.

all - India

item group	percentage share in consumer expenditure for rural (urban) households in MPCE class (Rs.)			
	0-110	110-215	215-385	385 & above
cereals	44(31)	36(30)	26(20)	13(10)

miscellaneous goods & services	8(12)	10(13)	14(16)	19(24)
milk & milk products	3(5)	7(8)	10(11)	11(11)
clothing & footwear	1(1)	3(1)	6(3)	12(9)
all food	77(73)	75(72)	68(67)	49(48)
all non-food	23(27)	25(28)	32(33)	51(52)

3.15 Food and non-food components of total expenditure : inter-state variation

3.15.1 State-level break-ups of MPCE into components (per capita spending on different item groups) are given in Statement 3.6 (R & U) and statewise percentage composition of MPCE in Statement 3.7 (R & U). The food and non-food categories will be considered first, ignoring for the moment their sub-divisions. For 10 of the

rural

30 days' per capita food expenditure	no. of states

"major" states, per capita rural expenditure on food over period of 30 days ranged between Rs.145 and Rs.175, with Utta Pradesh (Rs.144), Bihar, Madhya Pradesh and Karnataka (al roughly around Rs.148) ranking among the lowest. In the urba sector, average expenditure on food for all 15 major state varied between Rs.180 and Rs.260, with only the figures for Utta Pradesh and Bihar falling short of Rs.200.

Distribution of 15 major states by monthly per capita expenditure on foo in the urban sector

30 days' per capita food expenditure	urban no. of states
Rs.180-210	4
Rs.210-235	7
Rs.235-260	4

State-level averages per person of non-food expenditure in rural areas, though varying from Rs.48 to Rs.170 for the 15 major states, were found to be within the relatively narrow range Rs.70-Rs.95 for as many as 9 of these states. The highest level

Distribution of 15 major states by monthly per capita non-food expenditure in the rural sector

30 days' per capita non-food expenditure	rural no. of states
Rs. 45- 70	2
Rs. 70- 95	9
Rs. 95-145	3
Rs.145-170	1

of per capita rural expenditure on non-food was reported by Punjab (Rs.169) and the lowest by Bihar (Rs.48). In the urban sector 14 of the 15 major states reported per capita non-food expenditure between Rs.130 and Rs.230.

Distribution of 15 major states by monthly per capita non-food expenditure in the urban sector

30 days' per capita non-food expenditure	urban no. of states
Rs. 90-130	1
Rs.130-170	8
Rs.170-230	6

3.16 Consumption of cereals : sectoral and inter-state variation

3.16.1 Variation over sectors and states of per capita quantity

and value of consumption of cereals may be studied from Statement 3.8 (R & U).

cereal	30 days' per capita consumption (kg.)	
	rural	urban
rice	7.16	5.26
wheat	4.51	4.78
jowar	0.75	0.32
bajra	0.46	0.17
maize	0.32	0.05
other cereals	0.33	0.10
total cereals	13.53	10.68

It is observed that at the all-India level, per capita consumption of the rural population exceeded that of the urban significantly for every cereal except wheat, per capita consumption of which was more in the urban sector. Taking all cereals together, monthly consumption per person at the all-India level was 13.5 kg. in the rural sector and 10.7 kg. in the urban sector - about 3 kg. less. As in earlier rounds, per capita cereal consumption of the rural population was higher than that of the urban population in every state. In nearly all major states average monthly consumption of cereals per person was within the range 11-15 kg. for the rural sector and within 9-13.5 kg. for the urban sector.

3.16.2 At the all-India level rice accounted for 53% by weight of cereal consumption in the rural sector and 49% in the urban sector. Wheat accounted for 33% in the rural sector and 45% in the urban sector. Individual states, however, were, with only a few exceptions, as usual found to be heavily inclined towards one or the other of these two cereals. Apart from Karnataka and rural areas of Maharashtra and Gujarat, all major states had rice and wheat accounting for over 80% by weight of total cereal consumption in both rural and urban areas .

major rice-consuming states			major wheat-consuming states		
state	percentage of rice in total cereal consumption		state	percentage of wheat in total cereal consumption	
	rural	urban		rural	urban
Assam	96%	88%	Punjab	88%	91%
West Bengal	93%	87%	Haryana	90%	86%

Gujarat	19(28)	35(57)	5(1)	30(13)	11(1)

3.16.3 Value of per capita cereal consumption over a period of 30 days exhibited greater variation over states than quantity of consumption. Value of cereals consumed per person in Orissa was nearly double that in Punjab for both rural and urban sectors. Generally, in the "wheat-consuming" states, less than Rs.60 was spent per person per month on cereals, compared to Rs. 70 or more in most "rice-consuming" states.

3.17 Trends in composition of household MPCE : all-India

3.17.1 The percentage composition of household MPCE at the all-India level is shown for each NSS round from the 43rd to the 48th in Statement 3.9. The same 21 broad groups of items which were used in the earlier discussion of consumption patterns are used here. It is apparent that no appreciable changes occurred in the shares of any of these groups in household MPCE over the period under consideration, viz., mid-1987 to 1992.

3.18 Trends in consumption of cereals : all-India

3.18.1 Quantity and value of per capita consumption of important cereals are shown in Statement 3.10 for each NSS round from the 43rd to the 48th. It may be observed that per capita consumption levels of all important cereals (with one exception) as well as of "total cereals", have remained stable in both sectors over the

period under consideration in physical terms, while the value of per capita consumption has increased steadily over rounds for each cereal. The exception is jowar, whose per capita consumption in physical terms is seen to have declined steadily through the years in both sectors.

3.19 Other trends

3.19.1 Statement 3.11 shows changes over the past few rounds in certain other parameters of interest, such as average household size, average MPCE, and 20th, 50th and 80th percentile values of the distribution of persons by MPCE, separately for rural and urban sectors. Differences in average household size over rounds clearly reflect little more than sampling fluctuations around the 43rd (quinquennial) round figures of 5.1 (rural) and 4.7 (urban). It is possible that per capita consumption of cereals is declining very gradually in both sectors; however, the trend is yet to be conclusively established. Values in rupees of the mean and the selected percentiles of the MPCE distribution all appear to have increased steadily with the rise in the price level, from the 43rd round to the 48th, by about 60% in both sectors. The increase over rounds appears steady except that the 47th round figures are slightly on the higher side; this could be due to seasonality in consumption as the 47th round covered only a six-month reference period instead of a whole year.

3.20 Perception of households regarding sufficiency of food

3.20.1 Estimated numbers per 1000 of households in three different categories of food sufficiency/shortage, based on sample households' own perception, are given for each sector of each state in Statement 3.12. 70 per 1000 rural households and 23 per 1000 urban households in the country reported getting sufficient food only in some months of the year.

sector	number per 1000 households getting two square meals a day		
	throughout the year	only some months of the year	not even in some months of the year
rural	923	70	7
urban	973	23	4

The proportion of those not getting sufficient food even in some months of the year was less than 1% in both sectors for all-India, but the rural sector of Assam had as many as 5% households in this category, while rural Bihar and Orissa had around 2% ; all other major states had 1% or less. Those getting sufficient food only some months of the year constituted 22% of households in rural Orissa, 12-15% in rural West Bengal, Assam, Karnataka and Kerala, and less than 8% in rural and urban sectors of all other major states.

STATEMENT 3.11: AVERAGE NUMBER OF PERSONS PER HOUSEHOLD; AVERAGE MPCE; 20TH, 50TH & 80TH PERCENTILES (MPCE) WITH RESPECT TO POPULATION AND AVERAGE MONTHLY PER CAPITA QUANTITY OF CONSUMPTION OF CEREALS IN RURAL AND URBAN AREAS OVER DIFFERENT NSS ROUNDS

group, the percentage of persons currently married is seen to be around 75% for rural females, 69% for rural males, 66% for urban females, and 62% for urban males.

3.21.2 Distribution of households by type of occupancy of dwelling unit (owned/rented/others/no dwelling) is given in Statement 3.14 (R & U) for each state within each sector. It is

sector	number per 1000 of households of occupancy type			
	owned dwelling unit	rented dwelling unit	otherwise occupied dwelling unit	no dwelling
rural	931	39	28	2
urban	578	351	69	2

observed that 93% of rural households in the country lived in owned dwelling units compared to 58% for the urban sector, where 35% of households lived in rented dwelling units. In the urban sector Kerala had the highest proportion of households owning their dwelling unit (over 78%). For other major states the proportion varied between 46% and 72%.

3.21.3 Distribution of households with dwelling units by structure type (katcha/semi-pucca/pucca) is given for each state within each sector in Statement 3.15. The findings are in conformity with the previous round. Both sectoral and inter-state variation are considerable. 67% of urban households in the country, but only 27% of rural households, lived in pucca structures. As many as 38% of rural households lived in katcha structures (compared to 10% for urban households). Punjab and

all-India

structure type of dwelling unit	percentage of households	
	rural	urban
katcha	38	10
semi-pucca	35	23
pucca	27	67

Haryana had the highest proportions (around 70%) of rural households living in pucca structures. In both sectors, Assam and Orissa had the highest percentages of households living in katcha structures.

3.21.4 Statement 3.16 gives, for each state within each sector, per 1000 distribution of households by primary source of energy for cooking. As observed in the previous round (47th), about 80% of rural households relied mainly on firewood and chips for cooking, compared to only 31-32% for urban households. On the other hand, as many as 29% of urban households relied primarily

all-India

primary source of energy for cooking	percentage of households	
	rural	urban
coke/coal	2.3	7.6
firewood & chips	80.0	31.5
LPG	1.7	29.0
dung cake	10.0	2.4
kerosene	2.3	22.0

on LPG compared to less than 2% for rural, and 22% relied on kerosene compared to a little over 2% for rural. Coming to inter-state variation, "coke/coal" was of considerable importance in urban Bihar and West Bengal (about 40% of households) only, while dung cake was quite extensively used in rural Haryana, Punjab and Uttar Pradesh (27-33% of households). Even in the urban sector only a few states, notably Punjab, Gujarat and Maharashtra, relied more on LPG than on "firewood and chips".

3.21.5 Distribution of households by primary source of energy for lighting is given in Statement 3.17 for each state within each sector. It is seen that 64% of rural households and 20% of

all-India

primary source of energy for lighting	percentage of households	
	rural	urban
kerosene	64	20
electricity	34	79

urban households depended primarily on kerosene for lighting, while practically all the remaining households in both sectors used electricity. Among the major states Bihar, West Bengal, Assam, Orissa and Uttar Pradesh had the lowest proportion of rural households lit by electricity (4-17%) while all other major states had 37% or more, Punjab having as many as 83% households in this category. In the urban sector all major states had 60% or more households depending on electricity.

the all-India level reporting at least one meal taken from outside during the last 30 days was about 19% in the rural sector and somewhat higher, around 26%, in the urban; while percentage of households having performed any ceremony during the last 30 days was 4% in both sectors. Among the major states Kerala and Tamil Nadu had the highest proportions of households reporting meals taken from outside. Orissa, Assam and Karnataka had the highest proportions of households reporting performance of ceremonies.

3.21.7 The question "Did the household purchase any cereal from ration / fair price shop or at subsidised rate during the last 30 days?" was included in the household consumer expenditure schedule for the 48th round as in the preceding rounds. The information elicited is tabulated for the last three rounds in Statement 3.19 for rural and urban sectors of major states and all-India. Proportion of households having - during the last 30 days - purchased any cereal from ration / fair price shop or at subsidised rate is seen to have remained quite stable at the all-India level, being marginally higher in the urban sector compared

to the rural. In both sectors Kerala had the highest proportions of households in this category and Punjab the lowest, over the period covered by the three rounds. Increasing/declining trends in this proportion over time for individual states are not very clearly discernible for many states as the observed fluctuations obviously contain some sampling error. However, for some states, notably Punjab, urban Haryana, and rural Orissa, there appears to be some evidence of a declining trend in the proportion over this period.

SECTION FOUR

Employment & Unemployment

4.0 INTRODUCTION

As indicated in Section One, collection of data to generate an annual series of key indicators of 'employment' and 'unemployment' began with the 45th round survey operations. The collection of data for this purpose has been integrated with the annual survey on consumer expenditure with appropriate provisions being made in the 'demographic' block of the schedule used for collection of data on 'consumer expenditure'.

4.1 CONCEPTUAL FRAMEWORK ADOPTED FOR THE SURVEY

4.1.1 The main objective being to generate annual indicators of employment and unemployment, the information collected is aimed at classifying the population into different activity categories on the basis of the activities pursued by them during specified reference periods adopting two different approaches. The approaches are :

(i) usual status approach with a reference period of 365 days preceding the date of survey,

(ii) current weekly status approach with a reference period of 7 days preceding the date of survey.

The various activity categories along with the corresponding codes used in the 48th round were as follows :

code**	description
	working (or employed)
11	worked (self-employed) in household enterprises
21	worked as helper in household enterprises
31	worked as regular salaried/wage employee
41	worked as casual wage labour in public works
51	worked as casual wage labour in other types of work
61	did not work due to sickness though there was work in household enterprise
62	did not due to other reasons though there was work in household enterprise
71	did not work due sickness but had regular salaried/wage employment
72	did not work due other reasons but had regular salaried/wage employment

---

**Codes 61,62,71,72 were applicable only in the case of current weekly status approach

---

code	description
	not working but available for work (or unemployed)
81	sought work
82	did not seek but was available for work
	neither working nor available for work (or not in labour force)
91	attended educational institutions
92	attended domestic duties only
93	attended domestic duties and was also engaged in free collection of goods (vegetables, roots, firewood, cattle feed, etc.), tailoring, weaving etc., for household use
94	rentiers, pensioners, remittance recipients, etc
95	not able to work due to disability
96	beggars, prostitutes, etc.
97	others
98	did not work due to sickness (for casual workers only)
99	children of age 0-4 years

Persons reported as engaged in any one or more of the activities listed under the category codes 11 to 72 (11 to 51 for usual status) during the specified reference period were considered 'working' (or employed). A person who was assigned the activity category code 81 or 82 (81 for usual status) was considered 'seeking and/or available for work' (or unemployed). The employed and unemployed together constituted the 'labour force'. Any person reported to be engaged in or as belonging to one or more of the activities (inactivities)under the category 91 to 99 (91 to 97 and 99 for usual status) was classified as 'not in labour force'.

4.1.2Classification according to usual status approach: In the usual status approach, the status of activity on which a person spent a relatively longer time of the reference period of one year preceding the date of survey is first considered for deciding the principal usual activity status of the person. The activities pursued by a person are grouped into three broad categories (i) working or employed, (ii) seeking or available for work i.e. unemployed and (iii) not in labour force. Within the broad principal usual category identified for a person, detailed principal status will be assigned again on the basis of a relatively longer time spent in one of the detailed activity statuses. A person categorised as a 'worker' or 'employed' on the basis of his principal status is referred to as principal status worker. A 'non-worker' (on the basis of principal usual activity status) who pursued some gainful activity in a subsidiary capacity was considered to be usually working in a subsidiary capacity and is referred to as 'subsidiary status worker'. These two groups viz. 'principal status workers' and 'subsidiary status workers' together constituted 'all workers' according to the usual status classification. These are the same concepts adopted for the NSS quinquennial surveys for classification of population according to usual status.

**codes 71,72,82,and 98 were applicable only in the case of current weekly status approach.

4.1.3 Classification according to current weekly status approach: For classification of persons according to current weekly status, they had to be initially assigned a unique activity status with reference to a period of 7 days preceding the date of survey. This posed no problem in the case of persons having only one status during the reference week. But a unique status was assigned to persons pursuing more than one activity during the week by adopting a priority-cum-major-time rule. For assigning broad activity category (status), the status of 'working' got priority over the status of 'not working but seeking/available for work' and the status of 'seeking/available for work' got priority over the status of 'not working and not seeking/not available for work'. But within the broad category of 'working' or 'not working', the detailed activity category was assigned by major time criterion, i.e., the activity category in which major time was spent was considered the current weekly status. More specifically, a person was considered 'working' (or employed) if he was engaged in any one or more of the gainful activities (11 to 72) for at least one hour on any one day of the reference week. Further, he was assigned that gainful activity category (11 to 72) in which he spent major share of the working time during the reference week. A person who had not worked for even one hour on any one day of the week, but had been seeking work or had been available for work (although not seeking) at any time during the week was considered 'seeking/available for work' (or unemployed). Others were considered 'not available for work' (or not in labour force). Each member of the sample household was, thus, assigned a unique activity status for the week. Aggregates of persons under different activity statuses thus assigned provided the distribution of persons by activity during an average week of the survey period of one year.

4.2 DEFINITIONS

(a) **Gainful activity** : Gainful activity (or work) is the activity pursued for pay, profit or family gain or in other words, the activity which adds value to the 'national product'. Normally it is an activity which results in production of 'goods and services' for exchange. However, the activities in 'agriculture' (i.e. all activities relating to industry section 0) in which a part or whole of the agricultural production is used for own consumption and does not go for sale, are also considered 'gainful'. Execution of household chores or social commitments, etc. however, are not considered 'gainful' activities. The activties such as prostitution, begging, etc., which may result in earnings, are, by convention, not considered 'gainful'.

(b) **Workers (or employed)** : Persons engaged in any gainful activity are considered 'workers' (or employed). They are assigned any one or more of the nine activity categories under the first broad activity category, i.e. 'working or employed' in para 4.11.

(c) **Seeking or available for work (or unemployed)** : Persons who, owing to lack of work, had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work under the prevailing conditions of work and remuneration are considered unemployed.

(d) **Labour force** : Persons categorised as 'working' (or employed) and as 'seeking or available for work' (or unemployed) together constitute the labour force.

(e) **Not in labour force** : Persons categorised as neither 'working' nor 'seeking or available for work' are considered to be engaged in non-gainful activities or 'not in labour force'. The persons falling in this category are students, those engaged in domestic chores, rentiers, pensioners, those living on alms, recipients of remittance, infirm and disabled persons, prostitutes, children of age 0-4 years etc.

(f) **Worked (self-employed) in household enterprises - usual and current status code 11** : Persons who are engaged in their own farm or non-farm enterprises are defined as 'self-employed'- the term used to designate their activity status. There are different kinds of self-employed. Some may operate their enterprise without hiring any labour. Some others may occasionally hire a few labourers. There is also a third category who, by and large, regularly run their enterprises by hiring labour. The first two groups of self-employed are called own-account workers and the third, employers.

(g) **Worked as helper in household enterprise - usual and current status code 21** : The helpers are a category of working persons who work full or part time in household enterprise and do not receive any cash payment or any share of the family earnings in return for the work performed for the enterprise. They are household members, a large number of them being related to the household head and dependent on the household head and work for the family enterprise. They get food and shelter as members of the household. One may also come across persons in a household who do not receive any cash remuneration for their work in the household enterprise but have a share in the family earnings out of such enterprise. Such persons are not 'helpers' but 'self-employed'.On the other hand, if any member of the household works in the household enterprise for which he is paid wage/salary, he should be treated as an employee.

(h) **Worked as regular salaried/wage employee - usual and current status code 31** : Persons working in others' farm or non-farm enterprises (both household and non-household) and getting in return salary or wages on a regular basis and not on the basis of daily or periodic renewal of work contract) are treated as regular salaried/wage employees. The category 'salaried/wage employees' will include not only salaried and wage earners getting time wage but also earners getting piece wage or salary and paid apprentices, both full time and part time.

(i) **Worked as casual wage labour - usual and current status code 41 & 51** : Persons engaged in others farm or non-farm enterprises (both household and non-household) and getting in return wages according to the terms of a daily or periodic work contract are treated as casual wage labour. In the rural areas and also at the Government project sites casual labourers of a type can be seen who normally engage themselves in public works activities, including works taken up by the Government or local bodies for construction of roads, bunds, digging of ponds, etc., as relief measures/employment generation schemes, etc. Casual labourers

doing only such public works activities are 'casual labour in public works'. The rest are 'casual wage labourers in other types of works'.

(j) **Had work in household enterprise but did not work due to sickness/ other reasons - current status code 61/62 and had regular salaried/wage employment but did not work due to sickness/other reasons - current status code 71/72** : Persons engaged in farm or non-farm enterprises or working in others' farm or non-farm enterprises as salaried/wage employees but absenting from work temporarily due to sickness/for enjoying leave or holiday or for other reasons belong to these two categories 61/62 and 71/72 respectively depending on whether they are self-employed in household (farm or non-farm)enterprises or employed in others' (farm or non-farm) enterprises as wage/salaried employees.

(k) **Attended domestic duties and was also engaged in free collection of goods, sewing, tailoring, weaving, etc., for household use - usual and current status code 93** : In rural areas in general and particularly in the tribal areas, domestic work usually includes, among other things, a lot of work in free collection of vegetables, roots, firewood, etc., and in spinning and weaving of cloth for household use. Persons found to be regularly spending some of their time in performing the above activities along with household chores belong to this category.

4.3 Summary results

4.3.1 The key indicators of employment and unemployment based on the two different approaches mentioned in para 4.1.1, obtained from the 48th round survey are now presented. The all-India estimates are shown alongwith corresponding results obtained from the earlier surveys, starting with the second quinquennial survey on employment and unemployment. This provides a comparative picture of the employment-unemployment situation from 1977-78 (corresponding to 32nd round) to the present survey period (January-December 1992). In addition, some key estimates obtained from the 48th round survey are presented for each of the major states in statement no. 4.7 to 4.11. Detailed all-India tables are given in the appendix to the report.

4.3.2 While interpreting the survey results of various rounds on the key characteristics discussed below, it is to be noted that the results pertaining to 1977-78, 1983 and 1987-88 are based on quinquennial surveys of a relatively large number of households, while those for the years 1989-90, 1990-91, July-Dec.'91 and the present one are based on surveys conducted in a smaller number of households.

4.4 Employed

4.4.1 The estimates of the employed based on two approaches- usual status and current weekly status are given in Statement 4.1. The employed- in terms of usual status, are classified into 'principal status workers' (ps) and 'all workers' (principal and subsidiary status workers taken together). The usual status approach provides the long term picture of employment and does not reflect the seasonal fluctuations in the activity pattern.

The current weekly status approach which gives an average pictu and reflects the overall effects caused by intermittent changi in the activity pattern during the year. Statement 4.1 gives t number of persons employed per 1000 persons or the work population ratio (WPR).

Statement 4.1 : Number of persons employed per 1000 persons according to usual status and current weekly status approaches

32(1977-78)	497	508	490	123	156	125

From the statement it is seen that, at the all-India level , the employment scenario has remained rather stable over the years.The higher WPR observed for rural males in the first annual survey(i.e., 45th round) in comparison to the previous quinquennial surveys is found to be almost at the same level of around 55 per cent. For rural females, the proportion has remained almost stable at about 31-32 per cent in all the surveys. In the case of urban sector also the worker population ratio has remained almost constant for males and females. Discounting the very marginal increase observed in the case of females, these rates are around 51 per cent for urban males0 and 15 per cent for urban females. The current weekly status proportions also show a similar behaviour and are not very different from the usual status proportions except that they are marginally lower than the usual status rates in most cases as is to be expected.

4.4.2 **Distribution of usually employed by category of employment:** Persons employed are categorised into three broad groups according to their category of employment. These groups are (i) self-employed (ii) regular employees and (iii) casual labour. The distribution of the usually employed by category of employment is given in Statement 4.2. The basic structure of the employed as revealed from the Statement shows that more than half of the employed in the rural areas are in the 'self-employed' category. The percentages of regular employees among the usual principal status employed are about 8 per cent and 3 per cent for male and female respectively in the rural sector. There is a marginal increase in the share of self employed with a corresponding decrease in the share of regular employees in the present survey. However, the proportion of casual labour among rural males is almost at the same level as in 1987-88. In contrast, in the urban sector the share of self employed has declined marginally and that of casual labour has slightly gone up. The share of regular employees among the employed urbanfemales employed has also gone up slightly.

4.4.3 **Distribution of usually employed by broad groups of Industry:** The shifting of the work force away from the agriculture sector (primary sector) to manufacturing and tertiary sector is an important aspect in the study of the structure of employment. Statement 4.3 gives the per 1000 distribution of usually working by broad groups of industry. The industry sections (0-9) are grouped as (i) primary (0), (ii) secondary(1-5) and tertiary(6-9)*. It has been clearly established from the quinquennial survey results that there is a steady decrease in the percentage of usually working in the primary sector. However, the results of the three annual surveys presented in Statement 4.3 do not show any such trend. Perhaps the sample sizes of the annual surveys are not adequate enough to capture the long term changes in the structure of the work force.

4.5 Unemployed

4.5.1 As for the 'employed', for the 'unemployed' also two different estimates are obtained from the annual survey data viz. (i) persons unemployed based on the usual status classification and (ii) persons unemployed based on the weekly status classification. The first estimate indicates the magnitudes of persons unemployed for a relatively longer period of the reference period of 365 days and approximates to an indicator of the chronically unemployed. Two estimates of the usually unemployed are presented- usually unemployed in terms of their principal status (ps) and usually unemployed excluding the subsidiary status workers(usual adjusted). Some of the unemployed identified on the basis of principal status might be working in a subsidiary capacity. Hence the unemployment rate derived on the basis of usual adjusted is expected to be lower than that based on principal status. The other estimate i.e. the current weekly status gives the average weekly picture of unemployment during the survey year and covers both chronic and also the intermittent unemployment caused by seasonal fluctuations in employment of those categorised as usually employed.

4.5.2 **Unemployment rates(UR)** : Number of persons unemployed pe thousand persons in the labour force(i.e. total of employed an unemployed) is termed as the unemployment rate. Statement 4. gives the UR along with the number of persons unemployed per 100 persons. The unemployment rate among the males is seen to b almost at the same level as obtaining since the 1989-90 annua survey which marked a decline from the 1987-88 quinquennia survey. In the case of females especially in urban sector, som fluctuations are visible. However the size of the urban femal labour force is very small and the unemployment rate i susceptible to changes in the labour force due to withdrawal fro labour force etc.

4.5.3 **Under-utilisation of labour time of the usually employed** : The two important aspects of the employment scenario in th Indian context are the dominant role of agriculture an agriculture related activities in providing jobs and the 'sel employed' status of those employed. Both these factors help t absorb a large number of persons at very low productivity leve and with a marginal engagement. As agriculture related activitie

Statement 4.4 : Unemployment rates(number of persons unemployed per 1000 persons in the labour force)

Note: The figures in the parentheses are the number of persons unemployed per 1000 persons.

are highly seasonal, persons may not find enough work in lean seasons, though they may get categorised as employed as per their 'usual status'. A classification of the usually employed by their weekly status helps to reveal this dimension. Statement 4.5 gives the distribution of the usually employed (taking into account both the principal and subsidiary status employed) by their current weekly status. The corresponding results obtained from the surveys from 43rd onwards are also presented in the statement. Relative to the 43rd Round, the proportion of the currently employed among the usually employed has risen a little while that of the currently unemployed and currently outside the labour force has fallen to some extent, particularly in the case of females.

Statement 4.5 : Per 1000 distribution of usually employed(ps+ss) by their broad current weekly status

4.7 Regional estimates

4.7.1 In view of the small sample size in the annual surveys on consumer expenditure and employment-unemployment, the detailed state-level tables are not presented in the Appendix to the report. Key results, however are presented for the major states and groups of smaller states and union territories* in Statement 4.7 to 4.11. The descriptions of the statements are :

Statement 4.7 : Per 1000 distribution of persons by broad current weekly activity.

Statement 4.8 : Per 1000 distribution of persons by broad usual activity (principal).

Statement 4.9 : Per 1000 distribution of persons by broad usual activity (principal and subsidiary).

Statement 4.10 : Per 1000 distribution of usually working persons by broad groups of industry.

Statement 4.11 : Per 1000 distribution of usually working persons (principal and subsidiary) by broad current weekly activity.

The first three statements give the distribution of population by broad activity status according to usual status(principal), usual status(principal and subsidiary) and current weekly status respectively. Broad activity status used for the purpose are :

(i) self-employed (ii) regular employees (iii) casual labour (iv) unemployed (v) students (vi) engaged in domestic duties and (vii) others not in labour force.

The distribution of usually working according to the principal status and both the principal as well as subsidiary statuses by the three broad groups of industry sections-primary, secondary and tertiary is presented in Statement 4.10. The broad current weekly activity ('working','unemployed 'and 'not in labour force') distribution of the usually employed in the principal and subsidiary statuses is given in Statement 4.11.

---

* The groups of smaller states/union territories are :

i) North Eastern : Arunachal Pradesh, Manipur, Meghalaya, Mizoram, Nagaland, Sikkim & Tripura

ii) North Western : Jammu & Kashmir, Himachal Pradesh, Chandigarh & Delhi

iii) Southern : Andaman & Nicobar Islands, Dadra & Nagar Haveli, Daman & Diu, Lakshadweep Pondicherry

---

In the Statements and subsequent tables a '-' and '0' represent 'no sample persons in the specified class' and 'the estimated value is negligible' cases respectively.

APPENDIX - I

Detailed Tables

Notes on tables

1. Tables are presented separately for rural and urban sectors.

2. Where not mentioned in the table description given in the list below, estimates are at all-India level.

3. The totals/sub-totals presented in different tables may not exactly agree with each other due to rounding off errors.

4. The difference from 1000 of the sum of the components of per 1000 distribution has been adjusted with the rwo/column having maximum entry to make the components add up to 1000. However, the unadjusted totals have been printed in the tables.

5. The descriptions of activity codes used in Tables 12-16 are as given in para 4.1 of Section Four.

6. In tables 12, 13 and 14, "all age-groups" include "not recorded" cases also.

7. NR stands for "not recorded".

List of Tables

table no.	description	page no.
(1)	(2)	(3)
1.	Estimated number of households and persons by sex for each monthly per capita expenditure class.	A3 - A4
2.	Per 1000 distribution of households and persons by monthly per capita expenditure class and economically active persons per 1000 households for different monthly per capita expenditure classes.	A5 - A6
3.	Quantity (kg.0.00) and value (Rs.0.00) of consumption of cereals, gram and cereal substitutes per person for a period of 30 days for each monthly per capita expenditure class.	A7 - A8
4.	Value (Rs.0.00) of consumption of broad groups of food & non-food items per person for a period of 30 days for each monthly per capita expenditure class.	A9 -A10

table no.	description	page no.
(1)	(2)	(3)
5.	Value (Rs. 0.00) of consumption of ingredients of pan, medicines, medical services and private tuition per person for a period of 30 days for each monthly per capita expenditure class.	A11-A12
6.	Per 1000 distribution of households by availability of two square meals a day for each monthly per capita expenditure class.	A13-A14
7.	Per 1000 distribution of persons by current weekly activity for each age-group.	A15-A20
8.	Per 1000 distribution of persons by principal usual activity category for each each-group.	A21-A26
9.	Per 1000 distribution of persons by usual activity category taking also into consideration the subsidiary gainful status of persons categorised not working in the principal status for each age-group.	A27-A32
10.	Per 1000 distribution of usually working persons by industry.	A33-A34
11.	Per 1000 distribution of persons (males/females/all persons) by current weekly activity for each usual activity taking also into consideration the subsidiary gainful status of persons categorised not working in the principal status.	A35-A40
12.	Per 1000 distribution of persons by marital status for each age-group.	A41-A46

GOVERNMENT OF INDIA
NEW DELHI

DECEMBER 1994

PREFACE

The National Sample Survey Organisation (NSSO) has been carrying out All - India surveys quinquennially on consumer expenditure, employment & unemployment. In order to have an understanding of short-term changes in consumer expenditure patterns, the NSSO began collecting consumer expenditure data in its annual rounds from the 42nd round (1986-87) onwards with two households per sampled village/block. Some basic characteristics on employment and unemployment were added in these annual rounds from the 45th round (1989-90).

The present report is the 6th in the series and is based on data collected in the 48th round (January - December 1992) socio-economic survey. The report consists of four sections and one appendix. Sections one and two of the report give introduction and brief note on sample design and estimation procedure respectively as adopted in the 48th round. While section three deals with summary results on consumer expenditure, section four contains survey results on employment and unemployment data. The report also includes comparative information from previous surveys.

The schedule design for the survey was the same as adopted in previous annual rounds, while the field work for the survey was handled, as usual, by the Field Operations Division of the Organisation. The collected data were processed and tabulated by the Data Processing Division of NSSO. The report has been prepared by SDRD. I am grateful to the members of Governing Council, Heads of various Divisions of NSSO and their colleagues for the efforts in preparing the report which, hopefully, can serve as a reference document to planners and policy makers.

Comments/suggestions, from the readers of the report will be most welcome.
