Twentyfourth Round : July 1969 - June 1970

Number. 276.

Tables with Notes on Capital Formation

SECTION ONE

INTRODUCTION

1.1 This report presents results on capital formation by the rural and urban population of the different states and all-India, based on the data collected in the twenty-fourth round (July 1969 - June 1970) of the National Sample Survey (NSS). Data on investments by households were collected, along with other items of information, though the integrated household schedule (number 16) introduced in the nineteenth round of NSS.

1.2 Information on investment related to expenditure incurred on physical assets by households during one month and one year preceding the date of survey. Enquiry was made regarding the expenditure made for purchase of new and old assets, for construction of new assets and for improvement and major repairs of old assets. In addition, information on number and value of livestock possessed by the households as on date of survey and also one year ago were collected. Estimates relating to these items of information have been presented in this report. The physical assets were itemised as: land, building, machinery, tools and implements, transport equipments and others.

1.3 The survey period of 24th round was a full year from July 1969 to June 1970.

1.4 The geographical coverage of the survey was the whole of the rural and urban areas of India excepting : Arunachal Pradesh; Ladakh district of Jammu & Kashmir; Mizo Hills district of Assam; Pal and Samari tehsils of district Surguja and Bijapur, Dantewara and Konta tehsils of district Bastar of Madhya Pradesh; rural areas of Nagaland; Mao, Ukhrul and Tamenglong sub-divisions of Manipur; Longai and Kanchanpur areas of Tripura; the Andaman and Nicobar Islands and Laccadive, Minicoy and Amindivi Islands.

1.5 The field work was undertaken by the Directorate of NSS of the Government of India in all the states and union territories except in West Bengal and Bombay city where the field staff of the Indian Statistical Institute collected the data.

1.6 All the states, excepting West Bengal and Nagaland, and the union territories of Manipur and Tripura participated in the work of the 24th round on a full-matching basis. (The states which conducted the survey with a sample size equal to that of the central sample are considered to have participated on a full-matching basis. The collection and processing of data for the state samples was the responsibility of the respective State Government).

The present report is based on the central sample only. The states and union territories mentioned in this report should be identified as those existing at the time of commencement of the twenty-fourth round of NSS (July 1969).

1.7 This report contains four sections and two appendices. In Section Two, some important concepts used in the enquiry have been described, and some salient features about the extent of capital formation in Section Three. Sample design, and estimation procedure have been outlined in Section Four. Appendix I contains detailed tables for rural and urban areas respectively. A facsimile of the schedule of enquiry has been given in Appendix II.

1.8 The following tables have been presented in this report :-

Table (0) : Number of sample villages, blocks and households

Table (1) : Per household total monthly expenditure on purchase, construction, improvement and major repair of physical assets

Table (2) : Per household monthly expenditure, transacted in cash, on purchase, construction, improvement and major repair of physical assets.

Table (3) : Per household total monthly expenditure on purchase, construction and improvement of physical assets by household industry group.

Table (4a) : Per household expenditure per year on purchase of new and used physical assets

Table (4b) : Per household expenditure per year on construction, improvement and major repair of physical assets.

Table (4c) : Per household total expenditure per year on purchase, construction, improvement and major repair of physical assets.

Table (5) Per household change in the number and value of livestock during one year ended on the date of survey by type of livestock.

1.9 In numbering the tables in Appendix I the following system has been adopted : the first left-hand number is the table number listed above ; the second one represents the number assigned to a state/union territory (the number zero means all-India and all other states/u.t.'s have been arranged alphabetically before numbering). The alphabet 'R' at the end of a table number will mean that the table is for rural areas, and similarly 'U' will mean urban areas.

SNC.

SECTION TWO

CONCEPTS AND DEFINITIONS

2.1 The concepts and definitions followed in this survey for measuring capital formation from account of expenditure on physical assets remained same as those of nineteenth round of NSS. Some of the basic concepts and definitions adopted in this survey are given in the following paragraphs.

2.2 Household : A household was defined as a group of persons usually living together and taking principal meals from a common kitchen. A boarding house, a hotel, or a student's hostel was treated as a cluster of households, where each individual boarder formed a household. Households maintained and fed directly by government such as those in prisons, police quarter, cantonments, hospitals, asylum and relief camps were however, excluded from the scope of the survey.

2.3 Participation in capital formation : For the purpose of this enquiry a household was considered to have participated in capital formation if it had incurred expenditure at any point of time during one year preceding the date of enquiry on purchase, construction, improvement or major repairs of physical assets used for productive purposes. Exception was, however, made for land and buildings which included those used for domestic purposes also. Physical assets included land for domestic and enterprise purposes, buildings for residential, enterprise, profession and liberal arts, religious and charitable purposes, tools and implements, machinery, transport equipments and other physical assets, like, power generating equipments, furniture, fittings and also other durable goods for productive use. Assets included both new and used. Land was considered as used assets according to usual convention.

2.4 Purchase of assets : Expenditure incurred for purchase of assets included commission charges, installation charges, brokerage and other incidental charges including taxes.

2.5 Construction of assets : Construction of buildings and other structures meant addition to floor space. Buildings and structures included pucca, semi-pucca and kuccha buildings excluding very temporary type of sheds. Construction of other physical assets viz. tools and implements, machinery, transport equipment, furniture and fittings etc. included only those which were to be used

by the household for agriculture or for any other enterprise. Such physical assets constructed for sale were not taken into account.

2.6 Improvement of assets : Improvement of physical assets was generally meant for used assets to increase efficiency by replacement of parts of machineries, transport equipments etc. or through renovation of plants and machineries, buildings, or by alterations in tools and implements. Improvement of land included the raising and the levelling of land, the fencing and the bunding of land and other measures for reclamation of waste land, laying new plantation, construction of ponds, walls, tube-wells, canals, ditches and other irrigation devices to enhance the usefulness of land. Improvement made over new purchased assets to make it more useful were also included.

2.7 Major repairs : Major repair was distinguished from minor repair on the basis of cost and recurrence of such costs. That is to say such repairs of machineries, tools and implements, buildings etc. which were not to be undertaken again within a short span of time were classified as major repairs.

2.8 Household industry group : Each sample household was given a six-digited industry-occupation code in which the first three left-hand digits referred to the appropriate industry group and the next three to the relevant occupation of the household. In order to determine the industry-occupation of a household at first all the gainful occupations pursued by the members of the household during 365 days preceding the date of survey were listed. Out of these occupations that one which fetched the maximum earnings during that period was taken as the household occupation, and the industry in which that occupation was pursued was considered as the household industry.(for example, agriculture, trade, transport, manufacture etc.) In case the concerned occupation was followed in different industries, the particular industry yielding the largest income was considered for the industry code. The two digits in the hundredth and tenth places of this 3-digited code constituted the industry group code for a household.

SECTION THREE
SUMMARY OF RESULTS

3.1 A summary of results given in Appendix I of this report is presented in this section. The summary results relate to all-India estimates of

(i) per household monthly expenditure (i.e.purchase, construction, improvement and major repair) on physical assets,

(ii) per household annual expenditure on physical assets,

(iii) per household monthly expenditure on physical assets by household industry groups, and

(iv) inventory of livestock at two points of time,

The results are presented for rural and urban sectors separately.

3.2 It has been mentioned in Section One that the information on capital formation was elicited through the integrated household schedule which attempted to give a comprehensive picture of the socio-economic particulars of a household. This schedule was canvassed in a sample of 4 households (on an average) selected from all households in each sample village and block. A total sample of 33285 rural households and 19310 urban households were surveyed in the whole of India among which there were 9217 and 1750 reporting households in rural and urban areas respectively.

For the purpose of this enquiry on capital formation, physical assets were divided into six broad groups like land, building, tools and implements, machinery, transport equipments and others, and estimates of expenditure on each broad group were calculated for two reference periods viz. month (last 30 days) and year (last 365 days). The estimate of per household monthly expenditure was obtained as the ratio of the estimate of total monthly expenditure at the state/all-India level divided by the estimate of total number of households in that state or all-India. Per household annual expenditures were similarly estimated. Estimates of monthly expenditures are given in Table (1) below.

Table (1) : Per household monthly expenditure on physical assets in rural and urban areas of India, NSS 24th round.

sr. no.	item of asset	expenditure (Rs.0.00)	
		r u r a l	u r b a n
(1)	(2)	(3)	(4)
1.	land	2.79	1.14
2.	building	3.75	3.81
3.	tools & implements	1.12	0.18
4.	machinery	2.36	1.23
5.	transport equipments	0.55	0.96
6.	others	0.46	0.23
7.	total	11.03	7.55

3.3 From the above table it is seen that the per household monthly expenditure on physical assets was Rs.11.03 in the rural sector and Rs.7.55 in the urban sector (Table 1). It is seen that in both rural and urban sectors, expenditure on building had the greatest share viz. Rs.3.75 and Rs.3.81 respectively. The next important item of physical asset was 'land' in the rural sector and 'machinery' in the urban sector. The per household expenditure on land was Rs.2.79 and Rs.1.14 in rural and urban areas respectively. It may be mentioned here that expenditure made for land and building intended for productive and/or domestic use was considered as capital expenditure. For other assets, however, only those meant for productive uses were considered.

3.4 Expenditures on machinery, tools and implements, and transport were Rs.2.36, Rs.1.12 and Rs.0.55 respectively in rural areas and Rs.1.23, Rs.0.18 and Rs.0.96 in urban areas. The expenditure on 'others (other items like power generating equipments, furniture and fittings, and other durable goods for productive uses) was Rs.0.46 and Rs.0.23 in rural and urban areas respectively.

3.5 It may be mentioned here that practically whole of the expenditure on physical assets had been transacted in cash. The non-monetary expenditure (that is, expenses paid in terms of goods and services and not cash money) per household is quite small in urban areas being Rs.0.02 only and slightly larger viz. Rs.0.64 in rural areas. Estimates of total expenditure (cash plus kind) have been given in all the tables of this section.

SNC.

Table (2) : Per household annual expenditure on physical assets in rural and urban areas of India, NSS 19th and 24th rounds.

sr. no.	item of asset	expenditure in Rs.(0.00)			
		19th round		24th round	
		rural	urban	rural	urban
(1)	(2)	(3)	(4)	(5)	(6)
1.	land	9.81	3.62	17.28	9.01
2.	building	16.51	28.90	23.57	37.71
3.	tools & implements	8.97	4.96	8.26	2.52
4.	machinery	1.84	4.20	14.29	3.77
5.	transport equipment	2.32	6.21	2.33	5.47
6.	others	3.55	1.75	2.61	0.95
7.	t o t a l	43.00	49.64	68.34	59.43

3.6 It can be seen from tables (1) and (2) that the average total expenditure on physical assets per rural household was larger than that per urban household for both monthly and annual estimates. But the difference was much smaller in case of annual estimates. For a characteristic like physical investment, annual estimates are likely to be more stable than monthly estimates. Investments in building and transport equipments were higher in urban areas than in rural areas. On the other hand, for investments in land, tools & implements and machinery the rural areas showed higher figures. A comparison with estimates from the 19th round presented in Table (2) shows an increase in 24th round from Rs.43.00 to Rs.68.34 in rural areas and from Rs.49.64 to Rs.59.43 in urban areas. The relatively larger rise in the total expenditure on physical assets in the rural areas may be explained by greater investment efforts of the rural households which was made possible by financial aid and encouragement by the government and other public institutions.

3.7 Tabulation of expenditure on physical assets was also obtained by classifying the households into some 22 industry groups (like agriculture, livestock, mining, manufacture of various products, trade, transport, business and recreational services, construction etc.) and per household monthly expenditure on physical assets was estimated for each industry group.

These estimates, presented in Table 3 series of the Appendix give an idea of the extent of capital formation among households belonging to different industry groups. Estimates for some of the important groups are shown below.

Table (3) : Per household monthly expenditure on physical assets for some industry groups, NSS 24th round.

sr. no.	industry group	expenditure (Rs. 0.00)	
		r u r a l	u r b a n
(1)	(2)	(3)	(4)
1.	agriculture	8.68	1.34
2.	livestock & forestry	0.37	0.07
3.	manufacture	0.30	1.51
4.	construction	0.10	0.50
5.	trade	0.07	1.45
6.	transport	0.01	0.18
7.	government, community, business and recreation services	1.43	2.22

3.8 Agriculture being the biggest industry in rural India had naturally claimed the largest portion of rural capital expenditure. The group 'livestock and forestry' was also found to be an important one for rural areas. In fact it is these two groups that had pushed the rural per household expenditure (Rs. 11.03) above the urban figure (Rs.7.55). For all other groups the per household rural expenditure was less than the corresponding urban figure. Group No. 7 (government, community, business and recreational services) came out as the most important group in urban areas and the second one in rural areas, probably because of its wide coverage. As expected both the industry groups 'manufacture' and 'trade' accounted for substantial portions of urban capital expenditure. In the rural sector, on the contrary, 'manufacture' held a modest share and 'trade' a small one. Expenditures by households engaged in transport or construction enterprises were higher for urban households probably because of higher value of physical assets required for mechanised transport and expensive construction, furnitures and fittings in the urban sector. Capital expenditures by households belonging to other industry groups were insignificant in both rural and urban areas.

3.9 Changes in the inventory of livestock during one year are shown in Table (4) below. Since 24th round covered the period July 1969 - June 1970, the two points of time 'as on date of survey' and 'as one year before' may be taken as 1.1.70 and 1.1.69 respectively. The value of net addition to livestock per household was Rs. 3.91 in rural areas and Rs. 6.95 in urban areas.

Table (4) : Per household additions to value of livestock in rural and urban areas of India, NSS 24th round.

area	value of livestock in Rs. (0.00)		
	as on date of survey	as one year ago	addition to stock
(1)	(2)	(3)	(4)
rural	313.71	309.80	3.91
urban	93.05	86.10	6.95

3.10 Regarding state level estimates of per household monthly expenditure on physical assets it can be seen from Table (5) given below that considerable variation exists among the different states of India in both rural and urban areas. For rural areas, the per household monthly expenditure on physical assets ranges from the lowest figure of Rs. 0.00 in Goa to the highest figure of Rs.77.74 in Punjab. Next to Punjab come the Union Territory of Delhi(Rs.67.09) and the states of Haryana (Rs.44.68), Himachal Pradesh(Rs.35.46) and Gujarat (Rs.20.44). In addition, the states of Rajasthan (Rs.18.25), Karnataka (Rs.16.57) and Madhya Pradesh (Rs.13.17) stand above the all-India average household monthly expenditure (Rs.11.03). All other states are below the all-India average with Assam, West Bengal Orissa, Jammu and Kashmir, Tripura xxxxxx and Pondichery registering estimates below Rs. 5.00.

For the urban areas of India, Himachal Pradesh has the highest estimate at Rs.59.20 followed by Haryana (Rs.28.52), Tripura (Rs.15.25), Rajasthan (Rs.15.14), Punjab (Rs.14.77) Madhya Pradesh (Rs.11.60) and Uttar Pradesh (Rs.9.16). All other states have smaller per household monthly expenditure then the all-India average of Rs.7.55 with Goa-Daman-Diu recording the lowest figure at Rs.0.17 only.

Table (5) : Per household monthly expenditure on physical assets in different states of India, NSS 24th round.

23.	Pondicherry	0.88	3.71
24.	All-India	11.03	7.55

SNC.

SECTION FOUR

SAMPLE DESIGN AND ESTIMATION PROCEDURE

4.1 Sample Design : The general sample design in the NSS twentyfourth round was stratified with two-stage selection within each stratum; the first stage units were villages/blocks in the rural/urban areas and the second stage units were households for the socio-enonomic survey. The sample design had been made self-weighting for sub-strata 1 and 2 of the Integrated Household Schedule at state level both in rural and urban areas.

4.2 Sample Size (Central Sample) : The total sample size for socio-enonomic enquiries in the rural area was 8400 sample villages and in the urban area the size was 4632 sample blocks. On an average, 4 households were selected within a sample village/block.

4.3 Work Programme : The survey period (one year) of this round was divided into six sub-rounds of two months each for both the rural and the urban areas. In each sub-sample of a rural stratum, the 6 sample villages were numbered from 1 to 6. Similarly, the urban blocks within each sub-sample of an urban stratum were serially numbered from 1. Each sample village and block was visited and surveyed only once for socio-enonomic enquiries in the whole round according to a specified programme such that an equal number of villages and blocks were surveyed in each sub-round.

Rural Sample Design

4.4 Sampling Frame : The frame used for selection was the list of villages as per 1961 population census.

4.5 Stratification : The country had been divided into 64 regions by grouping, within each State or Union Territory, contiguous districts having similar population density and crop pattern. Strata were formed within each region by grouping contiguous tehsils having similar population densities and altitudes and having good transport and communication facilities amongst them, as far as possible. Formation of strata was such that the sum of the size measures of the villages for each stratum in a State/Union Territory was the same.

4.6 Allocation : The allocation of the total sample size to the states was based on a joint consideration of their rural population, area under cereal crops and investigators available. This allocation was modified to (i) ensure a minimum sample size of 360 villages in each state with the exception of Punjab and Haryana where there were only 192 and 144 sample villages respectively and about 200 sample villages in the Union Territories of Manipur and Tripura and (ii) to make the allocation multiples of 24 to facilitate having 24 villages per stratum.

4.7 Selection of villages : In each stratum four independent sub-samples of 12 villages each were selected circular systematically with probability proportional to size, (related to village population). In each sub-sample the villages with odd orders of selection formed the central sample.

4.8 Selection of households : The households of a sample village were divided into two sub-strata on the basis of land possessed by them. Sub-stratum 1 was formed of households whose land possessed exceeded a certain limit (which varied from one state to another) and sub-stratum 2 was formed of the remaining households. Further, the households of sub-stratum 2 were arranged in two classes viz. self-employed in non-agriculture and others. Then a sample of 2 households was selected linear systematically with specified interval and random start in each sub-stratum,.

Urban Sample Design

4.9 Sampling frame : The list of Urban Frame Survey (UFS) blocks and the list of 1961 census ecumeration blocks had been used as the sampling frame.

4.10 Stratification : In each state/union territory, towns with population less than 50,000 formed stratum 1 and the remaining towns and cities formed stratum 2 except the four big cities - Bombay, Calcutta, Delhi and Madras. Each one of these big cities formed stratum 3 of the respective state.

4.11 Allocation : The total sample size had been allocated to the states in proportion to their 1961 census urban population with some necessary adjustment.

4.12 Selection of blocks : In each stratum four independent sub-samples of blocks had been selected circular systematically with probability proportional to size (related to block population).

4.13 Selection of households : The households of a sample block were divided into two sub-strata on the basis of household monthly total consumer expenditure. The demarcation point between the two sub-strata varied from one state to another. In each sub-stratum, on an average two households were sampled linear systematically using specified interval and random start.

4.14 Estimation procedure

s	:	subscript for s^{th} stratum
t	:	subscript for t^{th} sub-stratum within a village/block
i	:	subscript for i^{th} sample village/block
j	:	subscript for j^{th} sample household
k	:	number of strata in the state
n_s	:	number of sample villages/blocks in the s^{th} rural/urban stratum
h	:	number of households selected for the enquiry
y	:	value of the characteristic

Then $\hat{Y}$, the estimate of the state total for the characteristic y in the Integrated household schedule based on the whole sample is given by :

for rural areas

$$\hat{Y} = \sum_{t=1}^{2} M_t \sum_{s=1}^{k} \sum_{i=1}^{24} \sum_{j=1}^{h_{sit}} y_{sitj}$$

$$= M_1 y_1 + M_2 y_2$$

where M_t is the constant multiplier for the concerned state (rural areas) and t^{th} sub-stratum; and y_t is the sample total for all smaple households in the state belonging to sub-stratum t of the rural sector.

SNC.

for urban areas :

$$\hat{Y} = \sum_{t=1}^{2} M_t \sum_{s=1}^{k} \sum_{i=1}^{n_s} \sum_{j=1}^{h_{sit}} y_{sitj}$$

$$= M_1 y_1 + M_2 y_2$$

where M_t and y_t have the same meaning as mentioned above and relate to the urban sector of the concerned state.

4.15 The ratio R = y/X of the state totals of two characteristic has been estimated as the ratio of the estimates of the corresponding totals. That is, capital formation per rural household has been estimated by the ratio of the estimates of total capital formation in the rural areas of the state and of total number of rural households in that state. Similarly for the urban sector

SNC.

National Sample Survey : 24th Round : (1969-70)
