NATIONAL SAMPLE SURVEY ORGANISATION

FOURTYFOURTH ROUND : JULY 1988 - JUNE 1989

REPORT ON
PARTICULARS OF BUILDING CONSTRUCTION

SECTION ONE : DISCRIPTION OF THE SURVEY

INTRODUCTION :

An enquiry on current building construction activity was taken up as a part of the 44th round of the National Sample Survey (NSS) mainly to meet the requirements of the National Building Organisation (NBO) and the Central Statistical Organisation (CSO). A survey of this kind was last undertaken by NSS in its 35th round (July 1980 - June 1981). Results of this survey are given in NSS Report No.359. Whereas in 35th round an attempt was made to cover both buildings and non-building constructions, the enquiry of 44th round covers only building constructions. In both the rounds, constructions undertaken by Government (central, state and local bodies), public sector undertakings and private corporate sector were left out of the coverage of the construction enquiry. NSS Report Nos. 359 and 355 (this is on a Pilot Survey on Construction carried out in urban areas in 35th round) give brief accounts of the past attempts made through NSS at collection of data on construction activity.

This report presents the results obtained from the 44th round enquiry on building construction.

Section one of the report gives a brief description of the survey, including broad aspects of survey design and the concepts and definitions adopted. Section Two gives briefly the sample design and estimation procedure. Section Three discusses the important results of the survey. Detailed tables are given in an Appendix.

STATISTICAL INSTITUTE

CALCUTTA

BROAD SURVEY DESIGN :

1.4 The sample design adopted was a stratified two-stage design in both rural and urban sectors. The first stage units (F.S.U) were census villages in the rural sector and UFS blocks in the urban sector. The second stage units (S.S.U.) were building construction works carried out within the geographical boundaries of the sample f.s.u's irrespective of where the owner of the construction lived. These included 'pucca', 'semi-pucca' and 'katcha' buildings. They were either new buildings or additions, alterations or improvements to existing buildings. Only construction works on which the expenditure incurred during the preceding 365 days was greater than Rs.250/- in the rural sector and Rs. 500/- in the urban sector were considered. As already mentioned, buildings constructed by governments public sector undertakings and the private corporate sector (i.e. private and public limited companies), were outside the survey coverage. The required data on construction expenditure, finance etc. were collected from sample constructions through Schedule 1.4 : Particulars of construction.

1.5 The total number of villages, blocks and building construction works selected were 7656 4836 and 42264 respectively.

CONCEPTS AND DEFINITIONS :

1.6 Unit of survey : The unit of survey was a building construction work on a given site. This could be either a new building or addition, alteration or improvement to existing buildings. The construction work referred to the entire building. For example if a co-operative housing society was constructing a building with a number of flats, the whole building formed one unit. If more than one physically separate structure formed one living unit (kitchen or bathroom might be detached from the main building) all of them together was treated as one building. On the other hand if parts of a building were owned by different persons at the time the construction work was carried out, then each such portion was treated as a separate construction work. (example : in ownership flat[illegible]ions, alterations or improvements carried out by each flat owner was treated as a separate construction work). In some

exceptional cases, more than one structure might be built on one site, but no separate account was available for the individual structures. Then all of them together were treated as one unit. In no case buildings constructed on different sites were grouped into one unit.

.7 New Buildings :

This was defined as the erection of an entirely new structure.

.8 Addition, alteration and improvement of building was defined as extension or betterment of existing buildings. Such work should result in increasing the usefulness of the structures by making provision for additional floor space and/or amenities or in extending their life. Any type of remodelling, renovation or major repair work came under this. Routine maintenance and minor repairs would not be considered in this category.

.9 Type of structure :

Buildings were classified into three types with respect to their structure - 'pucca' 'semi-pucca' and 'katcha' on the basis of the materials used to construct their walls and roof.

1.10 Pucca :

A pucca structure is one whose walls and roofs at least are made of 'pucca' materials such as cement, concrete, oven burnt bricks, stone and stone blocks, jack board, tiles, timber, galvanised or corrugated iron sheets, asbestos cement sheets etc.

1.11 Katcha :

A katcha structure was one which had both walls and roofs made of katcha or non-pucca materials such as un-burnt bricks, bamboo, mud, grass, leaves, reeds and/or thatch etc.

1.12 Semi-pucca :

A structure of this type was one which could not be treated as wholly pucca or wholly katcha.

1.13 Owner of a construction work was an individual, a collective body or an institution on whose account the construction was carried out. Such an individual/agency would be considered as the owner when the construction was on-going. For instance, in the case of a housing co-operative society constructing a block of flats which would be subsequently handed over to its members, the society would be considered as the owner at the time of construction. Owners could fall in one of the following types.

1.14 Household :

Any private individual, joint family or proprietary or partnership enterprise was treated as a household (or, rather, belonging to the household sector) for the building construction survey.

1.15 Co-operative Housing Society :

A co-operative society registered for the sole or major purpose of constructing houses/flats for its members is a Co-operative Housing Society. A society which simply arranges finance is not a Co-operative Housing Society

1.16 Private non-Household Organisation (other than Co-operative Housing Society)

All organisations falling in the private sector other than household housing co-operatives and joint stock companies come under this category. For example, educational and religious institutions run by committees; clubs; political parties; co-operative societies (other than housing societies) etc.

/tkb/

Completed building :

A "new building" construction was treated as completed if it was considered by the owner as completed and ready for first occupation. In the case of "addition, alteration and improvement", a construction was treated as completed if, in the opinion of the owner, it has been completed.

Construction expenditure :

This is the cost of construction incurred during the reference period, which includes (i) materials used, (ii) wages payable to labour and (iii) charges payable for various services utilised. Materials received as gift were evaluated at current market price and home produced items, at ex-farm or ex-factory rates. For free collections only transport and other incidental charges were counted. Cost of materials was inclusive of transportation charges.

19 The connotations of certain sources of finance are given below.

20 Government/local bodies :

This included central and state governments and local self-government bodies and institutions set up by them such as HUDCO.

21 Money lender :

This referred to indigeneous professional money lenders who lent money on interest.

.22 Friends and relations :

Friends and relations are those who lent money without interest. Such a person who charges interest was classified as money lender.

.23 Savings : This covered only deposits in banks, post offices etc. It did not include current incomes such as salary, pension etc.

1.24 Pension, P.F. and other superanuation benefits :

These refer red to commuted value of pension, gratuity, provident fund etc. received on retirement.

1.25 Others :

Current income by way of salary, pension, business and profession cash in hand, and any other income not considered elsewhere were be considered under 'others'.

1.26 Finance :

Data on finance for building construction by sources were collect for the reference period of 365 days preceding the date of survey In the case of borrowed funds, all funds borrowed during the reference period were included whether or not the whole of it was spent on construction during this period. In the case of own resources, however, the actual amount spent on construction work during the reference period only was considered.

SECTION TWO

SAMPLE DESIGN AND ESTIMATION PROCEDURE

SAMPLE DESIGN

1 Geographical Coverage :

The survey covered the whole of Indian Union except Ladakh and Kargil districts of Jammu & Kashmir. The survey was tentatively extended to the rural areas of Nagaland, but since the Nagaland rural sample was not a fully representative one, the present report does not include the data collected from it. Thus no estimates are given for rural Nagaland, nor does All India rural estimates include that state.

2 Procedure of selection of sample :

The sample design was stratified two-stage. The first stage units were census villages in the rural sector and Urban Frame Survey blocks in the urban sector. The second stage units were construction works. In the rural sector stratification was oriented towards the tribal survey of 44th round. In the urban sector, in towns with population 200,000 or more stratification has tried to take into account the uneven spatial distribution of construction activity. The sample villages were selected circular systematically with probability proportional to population and the sample blocks, circular systematically with equal probability. Large villages and blocks were divided into a number of hamlet-groups and sub-blocks out of which one was selected for survey. The sample constructions were selected after dividing them into 3 sub-strata viz.(1) pucca and semi-pucca new building, (2) pucca and semi-pucca additions, alterations and improvements and (3) all katcha buildings. Samples were selected from sub-stratum 1 systematically with probability proportional to size and from the other two sub-strata with equal probability. The number of samples allotted for each f.s.u. were 4, 1 and 2 from the three sub-strata respectively in the rural sector and 4, 2 and 1 respectively in the urban sector. In the case of a sample construction owned by a co-operative housing society data on source of finance were collected in block 7of schedule 1.4 from 2 members selected at random.

Statement (2.1) gives the number of sample villages and urban blocks allotted and surveyed and the number of sample constructions surveyed in rural and urban sectors by state/u.t.

* The samples selected from the rural sector of Nagaland have not been considered for this report.

Sutapa.

~~ESTIMATION PROCEDURE~~

~~In the case of a sample construction enumerated by a co-operative housing society, data from current and old finance records of the society are checked and 2 members of the society are selected at random.~~

ESTIMATION PROCEDURE :

3 The following notations are used :-

S	subscript for state
s	" stratum
i	" sample village/block
j	" sample construction
t	" sub-stratum
	total frame population of stratum (rural)
p	population of sample village (used for selection)
	total number of blocks in urban stratum
n	number of sample villages/blocks surveyed (including depopulated and zero cases)
D	number of hamlet-groups/sub-blocks formed
c	number of census villages in surveyed revenue village
H	total number of constructions listed
h	number of constructions surveyed
Z	total size of constructions of sub-stratum 1 listed in village/block
z	size of sample construction of sub-stratum 1.
x,y	any two characteristics to be estimated
X,Y	aggregate of x and y respectively
R	Y / X
^	placed over a symbol denotes its estimate from sample

4 The formulas for estimating aggregates are as follows :-

Rural :

(i) $$\hat{Y}_s = \frac{P_s}{n_s} \sum_{i=1}^{n_s} \frac{D_{si}}{p_{si}\, c_{si}} \sum_{t=1}^{3} \hat{Y}_{sit}$$

For t=1, (ii) $$\hat{Y}_{sil} = \frac{Z_{sil}}{h_{sil}} \sum_{j=1}^{h_{sil}} \frac{y_{silj}}{z_{silj}} \quad \text{when } H_{sil} > h_{sil}$$

and $$\hat{Y}_{sil} = \sum_{j=1}^{h_{sil}} y_{silj} \quad \text{when } H_{sil} = h_{sil}$$

t=2,3, (iii) $$\hat{Y}_{sit} = \frac{H_{sit}}{h_{sit}} \sum_{j=1}^{h_{sit}} y_{sitj}.$$

In case the construction was undertaken by a cooperative housing society, in the formula for $\hat{Y}_{sit}$, y_{sitj} will be replaced by

$$y'_{sitj} = \frac{A_{sitj}}{sa_{sitj}} \; y_{sitj}$$

where A and a stand for the total number and sample number of members in the society, for block 7 only.

Urban :

The formulas for urban sector are as above with $P_s/(p_{si}\ c_{si})$ replaced by K_s

The aggregates for any state and all India are obtained by adding those of the constituent strata.

2.6 Ratios of the form $R = Y/X$ are estimated by $\hat{R} = \hat{Y}/\hat{X}$, where $\hat{Y}$ and $\hat{X}$ are the estimates of aggregates at the level at which $\hat{R}$ is required.

tkb

SECTION THREE

SUMMARY FINDINGS

3.1 Detailed results of survey are given in the Appendix. They are given for each state and Union Territory and all India for rural and urban sectors separately. Besides, they are also given for each of the four metropolitan cities of Bombay, Calcutta, Delhi and Madras and for all of them combined. Some important findings of the survey as reflected in those tables are discussed in the following paragraphs.

3.2 Number of constructions by structure type : The following Statement (3.1) gives the estimated number of building constructions and their distribution by structure type for all India, rural urban and cities.

Statement (3.1) Estimated number of building constructions and their distribution by structure type all India: rural, urban and cities

structure type	rural		urban		cities	
	number of constructions (00)	%	number of constructions (00)	%	number of constructions (00)	%
(1)	(2)	(3)	(4)	(5)	(6)	(7)
pucca	42358	40.55	22846	82.24	1474	86.75
semi-pucca	23164	22.17	2952	10.62	121	7.13
katcha	38957	37.28	1982	7.14	104	6.12
all	104479	100.00	27780	100.00	1699	100.00

3.3 There is a preponderance of pucca and semi-pucca constructions in the urban areas.

S.Bose

INDIAN STATISTICAL INSTITUTE
22938
4 SEP 1991
CALCUTTA

3.4. Statement (3.2) Percentage distribution of construction by ownership type : All India

owner type	percentage of construction		
	rural	urban	cities
(1)	(2)	(3)	(4)
1. household for own use	98.60	97.34	96.83
2. housing cooperative	0.11	0.14	0.10
3. educational institution	0.08	0.20	0.93
4. religious institution	0.44	0.48	0.25
5. trust, club etc.	0.11	0.25	0.45
6. promotar/contractor	0.01	0.29	0.45
7. others	0.65	1.30	0.99
8. total	100.00	100.00	100.00

An overwhelming majority of building constructions are carried out households for their own use. It can be seen that the cooperative movement has not yet established itself in the country even in the urban sector. According to the state-wise estimates given in Table(of Appendix, in moststates no construction has been reported from this sector.

3.5 Expenditure on construction during 365 days preceding the da of enquiry : Construction expenditure consists of expendi- on materials, labour and services. Statement (3.3) gives the annual expenditure per construction work by major items of expenditure for pucca buildings and all buildings, at all India level for rural, urban and cities.

S.Bose

contd.....

tatement (3.3) : Annual average expenditure per construction by major items for pucca and all buildings for all India rural and urban sectors and all four cities pooled

i t e m	expenditure in rupees					
	r u r a l		u r b a n		c i t i e s	
	pucca build-ings	all build-ings	pucca build-ings	all build-ings	pucca build-ings	all build-ings
(1)	(2)	(3)	(4)	(5)	(6)	(7)
:icks (burnt)	3808	1780	3029	2590	2918	2605
ement	1765	763	3149	2627	4300	3791
ood and timber	1224	784	1232	1100	1354	1193
on and steel	1185	515	2177	1800	3362	2920
terials total	11773	6198	15815	13543	21150	18802
son	1272	636	2129	1800	2405	2127
rpenter	259	158	345	306	483	430
skilled labour	865	496	1503	1286	2037	1803
bour total	3035	1734	4579	3935	5919	5252
rvices total	250	123	640	535	1243	1088
tal expenditure	15059	8055	21035	18014	28317	25146

3.6 It will be of interest to see the cost per square metre of floo area for construction of new buildings of each type of structure and its variation between rural, urban and cities. The Statement (3.4) gives this information at all-India level for pucca, semi-pucca and katcha completed new buildings.

Statement (3.4) : Average cost of construction (in rupees) per square metre of floor area added for complete new buildings by type of structure all-Indi rural, urban and cities

structure type	cost per square metre (rupees)		
	r u r a l	u r b a n	c i t i
(1)	(2)	(3)	(4)
pucca	594	671	1363
semi-pucca	205	278	995
katcha	89	199	131
all	324	617	1279

As expected, the cost of construction is highest in the metropo cities and the lowest in the rural areas.

Table 5 of Appendix will reveal the state-wise variation in the average cost per square metre of floor area.

3.7 Apart from data on expenditure on construction, both NBO and t Reserve Bank were interested in the distribution of finance for buil construction by various sources such as borrowings from employer, ba money-lenders etc. and own resources. Data on finance were collect for the period of 365 days preceding the date of survey. The follow Statement (3.5) gives the distribution of finance procured during t last 365 days by sources.

Contd...

Statement Percentage distribution of finance procured during the last 365 days by source : all-India rural, urban and cities

Source	rural		urban		cities	
	amount per construction (Rs.)	%	amount per construction (Rs.)	%	amount per construction (Rs.)	%
(1)	(2)	(3)	(4)	(5)	(6)	(7)
Borrowings

Employer	59	0.71	437	1.87	465	1.93
Others	82	0.99	324	1.38	288	1.19
Total	141	1.70	761	3.25	753	3.12
Financial Institutions						
Co-operative housing financing agencies	40	0.48	264	1.13	158	0.66
Co-operative banks/ credit societies	154	1.86	522	2.23	587	2.44
Commercial banks	195	2.35	1038	4.44	560	2.32
Provident fund	29	0 35	164	0.70	118	0.49
L.I.C.	8	0.10	162	0.70	47	0.19
Other insurance companies	3	0.04	19	0.08	24	0.10
Money-lenders	629	7.58	697	2.98	2205	9.15
Total	1053	12 76	2865	12.24	3699	15.35
Individuals						
Friends and relatives	777	9.36	3603	15.39	2033	8.43
Others	173	2.08	437	1.87	1179	4.89
Total	950	11.45	4040	17.26	3212	13.33
Borrowings total	2149	25.91	7666	32.76	7664	31.80
Own sources						
Savings	3532	42.57	6863	29.32	10760	44.64
Superannuation benefits	259	3.12	1340	5.73	1247	5.17
Sale of assets	529	6.38	5171	22.09	1390	5.77
Others	1827	22.02	2363	10.10	3042	12.62
Total	6147	74.09	15737	67.24	16439	68.20
Grand total	8296	100.00	23404	100.00	24103	100.00

It can be seen that the rôle of institutional finance in building truction in the household sector is not, even now, very significant. As ortion of total finance it is of the same order in the rural and urban ors. Those who construct houses still depend mostly on own resources, savings and sale of assets being the most important sources for funds.

3.	Percentage distribution of construction works by agency of construction.	A-7 to A-8	A-260 to A-261	A-523
4.	Percentage distribution of construction works by purpose and type of structure.	A-9	A-262	A-524
5.	Average cost of construction per square metre for completed new building constructions by type of structure for each state/U.T. and all India.	A-10	A-263 to A-264	A-525
6.	Average floor area added/proposed to be added per construction reporting addition to floor space by type of structure and stage of construction separately for (i) new buildings and (ii) additions to floor space.	A-11 to A-14	A-265 to A-272	A-526
7.	Average cost/estimated cost of construction per construction work by nature of construction, type of structure and stage of construction.	A-15 to A-25	A-273 to A-283	A-527 to A-528

APPENDIX

STATISTICAL TABLES

LIST OF TABLES

Table no.	Description	page rural	page urban	page cities
8.	Average amount of construction expenditure incurred during the year per construction work by items of expenditure, nature of construction and type of structure.	A-26 to A-121	A-284 to A-382	A-529 to A-544
9.	Average amount of quantity (standard unit) and value (Rs.) of different items of input used since start of construction for completed new building per construction by type of structure.	A-122 to A-185	A-383 to A-448	A-545 to A-549
10.	Average amount of finance raised per construction by source of finance, type of structure and nature of construction.	A-186 to A-249	A-449 to A-514	A-550 to A-559
11.	Proportion of construction works reporting finance by source of finance, nature of construction and type of structure.	A-250 to A-251	A-515 to A-516	A-560 to A-561
12.	Weighted average interest rate of loans contracted, by agency giving loans for individual owners and organisations.	A-252 to A-255	A-517 to A-520	A-56 to A-5
