Report No. 531 (64/10.2/1)

सत्यमेव जयते

Employment and Unemployment Situation in India
2007-08

NSS 64th ROUND
(July 2007 – June 2008)

NSSO

National Sample Survey Office
Ministry of Statistics & Programme Implementation
Government of India

May 2010

Preface

The National Sample Survey Office (NSSO) conducted an all-India survey of households in the 64th round of NSS during July 2007 - June 2008. The survey subject comprised (i) employment-unemployment and migration, (ii) participation and expenditure in education, and (iii) household consumer expenditure. Surveys on employment and unemployment are being conducted quinquennially from 27th round (October 1972 – September 1973) onwards and the last quinquennial survey was in NSS 61st round (2004-05). Apart from quinquennial surveys, the NSSO collected information on some items on employment and unemployment, as an integral part of the annual series of consumer expenditure surveys from a smaller sample of households in each round of survey since 45th round (July 1989 – June 1990) till 59th round (January – December 2003). In NSS 64th round, the particulars on employment and unemployment were integrated with the migration particulars. The present report is based on the data on employment and unemployment collected through the 64th round of NSS. It gives, quantitative information on various key characteristics pertaining to employment and unemployment.

Chapter One of this report is introductory. Chapter Two explains the concepts and definitions used in the survey. Chapter Three gives the main findings on employment and unemployment indicators. Detailed tables are given in Appendix A, while the sample design and the estimation procedure are explained in Appendix B. A facsimile of the schedule used for data collection is given as Appendix C. In Appendix D, the projected population as on 1st January 2008 has also been presented.

The Survey Design and Research Division (SDRD) of the NSSO undertook the development of the survey methodology and survey instruments, and the drafting of the report. The field work was carried out by the Field Operations Division (FOD) of NSSO while the data processing and tabulation work was handled by the Data Processing Division (DPD) of NSSO. The Coordination and Publication Division (CPD) coordinated various activities pertaining to the survey.

I am thankful to the members of the Steering Committee of National Sample Surveys, to the Working Group for NSS 64th round and National Statistical Commission for their valuable guidance at various stages of survey activities from designing of the questionnaire to the preparation and finalization of this report. I would also like to place on record my thanks to various officers of different divisions of the NSSO involved in the preparation of this report.

I hope the report will be found useful by planners, policy makers, academicians and researchers. Suggestions for improving the contents of the report are most welcome and may be sent to the undersigned.

New Delhi

Director General & Chief Executive Officer

मुख्य परिणाम

यह रिपोर्ट जुलाई 2007 से जून 2008 के दौरान रोजगार और बेरोजगारी तथा प्रवसण विवरणों पर किये गये 64वें दौर सर्वेक्षण पर आधारित है । इस सर्वेक्षण में 1,25,578 परिवारों के एक प्रतिदर्श (ग्रामीण क्षेत्रों में 79,091 तथा नगरीय क्षेत्रों में 46,487) एवं 5,72,254 व्यक्तियों के एक प्रतिदर्श (ग्रामीण क्षेत्रों में 3,74,294 एवं नगरीय क्षेत्र में 1,97,960) को शामिल किया गया । रोजगार एवं बेरोजगारी दरों की माप तीन आधारों, यथा एक वर्ष की संदर्भ अवधि के लिए सामान्य स्तर, एक सप्ताह की संदर्भ अवधि के लिए वर्तमान साप्ताहिक स्तर तथा संदर्भ सप्ताह के प्रत्येक दिनों के दौरान किये गये दैनिक कार्य पर आधारित वर्तमान दैनिक स्तर पर की गयी । यदि अन्यथा वर्णित न हो, 'सभी' सामान्य स्तर कामगारों का अर्थ उन सभी कामगारों से होगा जिसके अन्तर्गत सामान्य प्रमुख और गौण स्तर के कामगारों को एक साथ *(प्रमुख स्तर+गौण स्तर)* शामिल किया गया है । कुछ मुख्य परिणाम नीचे दर्शाए गए हैं :-

A परिवार एवं जनसंख्या विशेषताएं

- लगभग 72% परिवार ग्रामीण भारत के थे जो कि कुल जनसंख्या का लगभग 74% था ।
- भारत में औसत परिवार आकार 4.5 था । ग्रामीण परिवार आकार (4.7), नगरीय परिवार आकार (4.2) से थोड़ा अधिक था ।
- 15-59 वर्ष आयु वर्ग की जनता, जो आर्थिक रूप से सक्रिय थी, के अंतर्गत ग्रामीण क्षेत्रों में लगभग 57% पुरुष एवं 60% महिलाएं तथा नगरीय क्षेत्रों में लगभग 67% पुरुष एवं 66% महिलाएं शामिल थीं ।

B श्रमबल एवं कार्यबल

- सामान्य स्तर *(प्रमुख स्तर+गौण स्तर)* के अनुसार 41% जनता श्रमबल में थी । इसका अनुपात ग्रामीण क्षेत्रों में 43% एवं नगरीय क्षेत्रों में 37% था । श्रमबल भागीदरी दर (एल.एफ.पी.आर.) थी ग्रामीण पुरुष का लगभग 56% एवं ग्रामीण महिलाओं का 29% जो श्रमबल में थे । नगरीय क्षेत्रों में तदनुरूपी अनुपात क्रमशः 58% एवं 15% था ।
- देश की लगभग 40% जनता सामान्य स्तर *(प्रमुख स्तर+गौण स्तर)* के अनुसार रोजगाररत थी । कामगार जनता अनुपात (का.ज.अ.) ग्रामीण क्षेत्रों में लगभग 42% एवं नगरीय क्षेत्रों में लगभग 35% था ।
- ग्रामीण एवं नगरीय दोनों क्षेत्रों में पुरुष का.ज.अ., महिला का.ज.अ. से काफी अधिक था । ग्रामीण एवं नगरीय दोनों क्षेत्रों में पुरुष का.ज.अ. लगभग 55% था । इसकी तुलना में, महिला का.ज.अ. ग्रामीण क्षेत्रों में 29% एवं नगरीय क्षेत्रों में 14% था ।
- वर्तमान दैनिक स्तर के आधार पर प्राप्त का.ज.अ., वर्तमान साप्ताहिक स्तर के अनुसार प्राप्त का.ज.अ. से कम थे, जो सामान्य स्तर दरों के आधार पर प्राप्त का.ज.अ. से कम थे : भारत में का.ज.अ. वर्तमान दैनिक स्तर के अनुसार 34%, वर्तमान साप्ताहिक स्तर के अनुसार 37% और सामान्य स्तर के अनुसार 40% था ।
- 2004-2005 एवं 2007-2008, के बीच ग्रामीण एवं नगरीय दोनों क्षेत्रों में, सामान्य स्तर *(प्रमुख स्तर+गौण स्तर)* में पुरुषों का का.ज.अ.55% पर अपरिवर्तित रहा । तथापि, महिलाओं के लिए, यह ग्रामीण क्षेत्रों में लगभग 4% बिन्दु (33% से 29%) एवं नगरीय क्षेत्रों में लगभग 3% बिन्दु (17% से 14%) कम हो गया ।

- 1993-94 एवं 2007-08 की अवधि के दौरान 5-14 वर्ष आयु के बच्चों के का.ज.अ. में कम होने की प्रवृत्ति दिखाई दी । ग्रामीण क्षेत्रों में पुरुष एवं महिला बच्चों दोनों के का.ज.अ. में कमी 1993-94 में 6 प्रतिशत से 2007-08 में 2 प्रतिशत हो गई । नगरीय क्षेत्रों में, पुरुष बच्चे के का.ज.अ. में कमी 1993-94 में 4 प्रतिशत से 2007-08 में 2 प्रतिशत हुई और महिला बच्चे के लिए 3 प्रतिशत से 1 प्रतिशत हुई ।

- ग्रामीण पुरुषों के बीच सामान्य स्तर *(प्रमुख स्तर+गौण स्तर)* में, अनुसूचित जन-जातिओं (अ.ज.जा.) का का.ज.अ. सबसे अधिक (57%) था जबकि अनुसूचित जाति(अ.जा.) एवं अन्य पिछड़ा वर्ग (ओ.बी.सी.) के लिए यह न्यूनतम (54%) था । ग्रामीण क्षेत्रों में महिलाओं का का.ज.अ. अनुसूचित जन-जाति(अ.ज.जा.) के लिए सबसे अधिक (40%) और 'अन्य' के लिए सबसे कम (22%) था ।

- नगरीय पुरुषों में सामान्य स्तर के अनुसार अ.जा. और 'अन्य' के लिए का.ज.अ. सबसे अधिक (प्रत्येक के लिए 56%) जबकि अ.ज.जा. के लिए का.ज.अ. सबसे कम (51%) था । नगरीय क्षेत्रों में महिला का.ज.अ., अ.ज.जा. के लिए सबसे अधिक (20%) था एवं 'अन्य' के लिए यह सबसे कम (12%) था ।

- ग्रामीण और नगरीय दोनों क्षेत्रों में पुरुषों और महिलाओं दोनों के लिए स्व-रोजगार स्तर प्रबल था । ग्रामीण भारत में आधे से अधिक सामान्य रूप से नियोजित ('सभी' कामगार) स्व-नियोजित थे, जिसका प्रतिशत पुरुषों के लिए 55% एवं महिलाओं के लिए लगभग 58% था । नगरीय भारत में यह अनुपात पुरुषों के लिए 43% एवं महिलाओं के लिए 42% था ।

- ग्रामीण एवं नगरीय भारत दोनों में नियमित मजदूरी/वेतनभोगी कर्मचारियों का प्रतिशत पुरुषों के मुकाबले महिलाओं में कम था । ग्रामीण भारत में नियमित मजदूरी/वेतनभोगी व्यक्तियों का अनुपात पुरुषों के लिए 9% एवं महिलाओं के लिए 4% था जबकि नगरीय क्षेत्रों में महिलाओं एवं पुरुषों के लिए यह क्रमशः 42% एवं 38% था ।

- कुल कार्यबल में अनियमित श्रमिकों का अनुपात ग्रामीण क्षेत्रों में नगरीय क्षेत्रों के मुकाबले काफी अधिक था । ग्रामीण क्षेत्रों में लगभग 36% पुरुष कामगार और 38% महिला कामगार अनियमित श्रमिक थे । नगरीय क्षेत्रों में लगभग 15% पुरुष कामगार और 20% महिला कामगार अनियमित श्रमिक थे ।

- ग्रामीण भारत में, सामान्य तौर पर नियोजित *(प्रमुख स्तर+गौण स्तर)* व्यक्तियों में लगभग 67% पुरुष और 84% महिलाएं कृषि क्षेत्र में कार्यरत थे । 1977-78 में यह प्रतिशत क्रमशः 81% और 88% था ।

- नगरीय भारत में, 'व्यापार, होटल और रेस्तरां' क्षेत्र में लगभग 28% पुरुष कामगार कार्यरत थे जबकि 'विनिर्माण' क्षेत्र में लगभग 24% पुरुष कामगार कार्यरत थे । 1977-78 से 2007-08 के दौरान, 'विनिर्माण' क्षेत्र में कार्यरत नगरीय पुरुषों का अनुपात 28% से घटाकर 24% हो गया जबकि 'व्यापार, होटल एवं रेस्तरां' में कार्यरत पुरुषों का अनुपात इस अवधि के दौरान 22% से बढ़कर 28% हो गया ।

- नगरीय महिलाओं के लिए 'अन्य सेवा' क्षेत्र के अंतर्गत कामगारों का अनुपात सबसे अधिक (38%) था, जबकि यह विनिर्माण क्षेत्र में 28% और कृषि क्षेत्र में 15% था ।

- 1977-78 से 'कृषि' क्षेत्र में नियोजित नगरीय महिलाओं का अनुपात लगभग 17 प्रतिशत बिन्दु (1977-78 में 32% से 2007-08 में 15%) कम हो गया ।

- नगरीय क्षेत्रों के तुलना में, ग्रामीण क्षेत्रों में, व्यक्तियों की एक बहुत बड़ी संख्या गौण आर्थिक कार्यकलाप में संलग्न थी । लगभग 14% ग्रामीण जनता और 2% नगरीय जनता गौण आर्थिक कार्यकलाप में संलग्न थी ।

- ग्रामीण क्षेत्रों में, गौण आर्थिक कार्यकलाप में संलग्नता सामान्य प्रमुख कार्यकलाप स्तर में वर्गीकृत कामगारों में अधिक पायी गयी । लगभग 25% ग्रामीण पुरुष कामगार (मुख्य स्तर के मुताबिक) और 24% ग्रामीण महिला कामगार (मुख्य स्तर के मुताबिक) गौण आर्थिक कार्यकलाप में संलग्न थे ।

- नियमित मजदूरी/वेतनभोगी कर्मचारियों के मजदूरी दरों (प्रतिदिन) में व्यापक लिंग के आधार पर भिन्नता दिखाई दी । 15-59 वर्ष आयु के नियमित मजदूरी/वेतनभोगी कर्मचारियों के लिए औसत मजदूरी दर ग्रामीण क्षेत्रों में पुरुषों के लिए रु. 175.30 और महिलाओं के लिए रु. 108.14 तथा नगरीय क्षेत्रों में पुरुषों के लिए रु 276.04 एवं महिलाओं के लिए रु. 212.86 थी ।

- सार्वजनिक कार्यों में अनियमित श्रमिकों की मजदूरी दर सार्वजनिक कार्यों के अतिरिक्त अन्य कार्यों में अनियमित मजदूरी की मजदूरी दर से काफी अधिक थी ।

- ग्रामीण क्षेत्रों में, महात्मा गांधी नरेग (एम.जी.एन.आर.ई.जी.) के अतिरिक्त अन्य सार्वजनिक कार्यों में अनियमित श्रमिको के रूप में कार्यरत 15-59 वर्ष की आयु के कामगारों की मजदूरी दर रु. 74.45 थी एवं महात्मा गांधी नरेग सार्वजनिक कार्यों के लिए मजदूरी दर रु. 78.91 थी । इसके अतिरिक्त सार्वजनिक कार्यों के अलावा अन्य कार्यों में अनियमित श्रमिकों के रूप में कार्यरत 15-59 वर्ष आयु के कामगारों की मजदूरी दर ग्रामीण क्षेत्रों में रु 60.33 तथा नगरीय क्षेत्रों में रु 72.24 थी ।

- एम.जी. नरेग सार्वजनिक कार्यों में अनियमित मजदूरों की मजदूरी दरों में कोई पुरुष-महिला भिन्नता नहीं थी तथा एम.जी. नरेग सार्वजनिक कार्यों के अतिरिक्त अन्य कार्यों में संलग्न अनियमित मजदूरों की मजदूरी दर में पुरुष-महिला भिन्नता लगभग नगण्य थी । तथापि, अन्य प्रकार के कार्यों में संलग्न अनियमित मजदूरों की मजदूरी दरों में पुरुष-महिला और ग्रामीण- नगरीय भिन्नता काफी अधिक थी ।

- ग्रामीण क्षेत्रों में, एम.जी. नरेग सार्वजनिक कार्यों के अतिरिक्त अन्य कार्यों में संलग्न अनियमित श्रमिकों की औसत पुरुष मजदूरी दर (15-59 वर्ष आयु के कामगारों की) रु 76.02 थी जबकि महिलाओं के लिए यह रु 70.66 थी ।

- एम.जी. नरेग सार्वजनिक कार्यों में संलग्न अनियमित मजदूरों की मजदूरी दर में कोई लिंग के आधार पर अंतर नहीं था तथा मजदूरी दर (15-59 वर्ष आयु के कामगारों की) पुरुष एवं महिला दोनों के लिए लगभग रु 79.00 थी ।

- रा.प्र.स. 64वें दौर के दौरान सार्वजनिक कार्यों में संलग्न ग्रामीण अनियमित श्रमिकों में व्यक्ति-दिनों का प्रतिशत हिस्सा रा.प्र.स. 61वें दौर के मुकाबले चार गुणा अधिक था । ग्रामीण क्षेत्रों में, एक साथ पुरुष और महिलाओं के लिए कुल अनियमित श्रमिक व्यक्ति-दिनों में एम.जी. नरेग सार्वजनिक कार्य एवं अन्य सार्वजनिक कार्यों में व्यक्ति-दिनों का हिस्सा 3.2 % था ।

- ग्रामीण अंचल में, सार्वजनिक कार्यों के अतिरिक्त अन्य कार्यों में संलग्न अनियमित श्रमिकों में एक पुरुष अनियमित श्रमिक (15-59 वर्ष आयु के) द्वारा औसतन, एक दिन में रु. 66.59 कमाया गया जबकि एक महिला अनियमित श्रमिक ने एक दिन में रु. 48.41 कमाया- जहाँ अंतर लगभग रु. 18 का था । नगरीय क्षेत्रों में, सार्वजनिक कार्यों के अतिरिक्त अन्य कार्यों में संलग्न एक पुरुष अनियमित श्रमिक ने एक दिन में रु 86.58 एवं एक महिला ने एक दिन में रु 51.34 की कमाई की ।

C बेरोजगारी दर :-

- अखिल भारतीय स्तर पर, सीडीएस अप्रोच में बेरोजगारी दर लगभग 8% थी । बेरोजगारी दर सी.डब्ल्यू.एस में लगभग 4% और सामान्य स्तर अप्रोच, अर्थात् सामान्य (समायोजित) में 2% रही ।
- सामान्य (समायोजित) स्तर अप्रोच में नगरीय क्षेत्रों में बेरोजगारी दर ग्रामीण क्षेत्रों में 2% के मुकाबले 4% थी तथा सी.एस.डब्ल्यू में ग्रामीण क्षेत्रों में 4% के मुकाबले नगरीय क्षेत्रों में 5% थी । सी.डी.एस. में यह दर नगरीय क्षेत्रों में लगभग 7% और ग्रामीण क्षेत्रों में 8% थी ।
- ग्रामीण क्षेत्रों में, सामान्य तौर पर, सभी स्थितियों में महिला बेरोजगारी दर, पुरुष बेरोजगारी दर से कम थी, परन्तु नगरीय क्षेत्रों में यह प्रवृत्ति उल्टी पायी गयी ।
- ग्रामीण क्षेत्रों में 9% पुरुषों के मुकाबले सीडीएस में महिला बेरोजगारी दर 8% रही जबकि नगरीय क्षेत्रों में, सीडीएस में महिला बेरोजगारी दर 10% थी जो पुरुष बेरोजगारी दर की तुलना में 3 प्रतिशत बिन्दु अधिक थी ।

D अल्परोजगार :-

- सर्वेक्षण तारीख के पूर्व सप्ताह (वर्तमान साप्ताहिक स्तर) के दौरान सामान्य तौर पर नियोजित पुरुष *(प्रमुख स्तर+गौण स्तर)* जो नियोजित नहीं थे (बेरोजगार + श्रमबल में नहीं), का अनुपात ग्रामीण क्षेत्रों में 4% और नगरीय क्षेत्रों में 2% था । सर्वेक्षण तारीख के पूर्व सप्ताह के दौरान सामान्य तौर पर नियोजित महिलायें *(प्रमुख स्तर+गौण स्तर)* जो नियोजित नहीं थीं (बेरोजगार + श्रमबल में नहीं), का अनुपात ग्रामीण क्षेत्रों में 19% और नगरीय क्षेत्रों में 7% था ।
- सामान्य तौर पर नियोजित *(प्रमुख स्तर+गौण स्तर)* बगैर कार्य (बेरोजगार + श्रमबल में नहीं) वाले व्यक्ति-दिनों का अनुपात ग्रामीण और नगरीय क्षेत्रों में महिलाओं के लिए क्रमशः 36% एवं 19% था जबकि पुरुषों के लिए यह अनुपात क्रमशः 11% और 5% था ।
- संदर्भ सप्ताह (वर्तमान साप्ताहिक स्तर के अनुसार) के दौरान अल्परोजगार वाले वे व्यक्ति जो बगैर रोजगार (बेरोजगार + श्रमबल में नहीं) के थे, के व्यक्ति-दिनों का अनुपात ग्रामीण पुरुषों के लिए लगभग 7 प्रतिशत, ग्रामीण महिलाओं के लिए 21 प्रतिशत, नगरीय पुरुषों के लिए 3 प्रतिशत एवं नगरीय महिलाओं के लिए 12 प्रतिशत था ।
- अल्परोजगार की उपर्युक्त लगभग सूचक दर यह सूचित करती है कि अल्परोजगार की स्थिति ग्रामों में नगरों के मुकाबले अधिक थी और महिलाओं में पुरुषों के मुकाबले अधिक थी ।

*****

HIGHLIGHTS

This report is based on the 64th round survey on employment and unemployment and migration particulars conducted during July, 2007 to June, 2008. The survey covered a sample of 1,25,578 households (79,091 in rural areas and 46,487 in urban areas) and a sample of 5,72,254 persons (3,74,294 in rural areas and 1,97,960 in urban areas). Employment and unemployment rates were measured in three different approaches, viz. *usual status (us)* with a reference period of one year, *current weekly status (cws)* with a one-week reference period and *current daily status (cds)* based on the daily activity pursued during each day of the reference week. Unless otherwise stated, 'all' *usual status* workers will mean all workers taking into consideration the *usual principal* and *subsidiary status* taken together (*ps+ss*). Some of the key findings are stated below.

A. Household and Population Characteristics

- About 72 per cent of the households belonged to rural India and accounted for nearly 74 per cent of the total population.

- Average household size in India was 4.5. The rural household size (4.7) was slightly higher than urban household size (4.2).

- The population in the age group 15-59 years, which is defined to be economically active, comprised about 57 per cent of males and 60 per cent of females in rural areas and about 67 per cent of males and 66 per cent of females in urban areas.

B. Labour Force and Work Force

- According to the *usual status* (ps+ss), 41 per cent of population belonged to the labour force. This proportion was 43 per cent for rural and 37 per cent for urban areas. The labour force participation rate (LFPR) was about 56 per cent of rural males and 29 per cent of rural females belonged to the labour force. The corresponding proportions in the urban areas were 58 per cent and 15 per cent, respectively.

- About 40 per cent of the population in the country were employed according *usual status (ps+ss)*. The worker population ratio (WPR) was about 42 per cent in the rural areas and 35 per cent in the urban areas.

- The male WPR in both the rural and urban areas were considerably higher than female WPR. In both the rural and urban areas, male WPR was nearly 55 per cent. Compared to this, the female WPR was 29 per cent in rural areas and 14 per cent in urban areas.

- The WPRs obtained according to *current daily status* were lower than those obtained in the *current weekly status*, which, in turn, were lower than those according to *usual status* rates: WPR in India, was 34 per cent as per *current daily status*, 37 per cent according to *current weekly status*, and it was 40 per cent according to *usual status*.

- Between 2004-2005 and 2007-08, in both rural and urban areas, WPR for males in *usual status (ps+ss)* remained unchanged at 55 per cent. However, for females, it decreased by about 4 percentage points for rural areas (from 33 per cent to 29 per cent) and about 3 percentage points for urban areas (from 17 per cent to 14 per cent).

- WPR for children of age 5-14 years had shown a declining trend during the period from 1993-94 and 2007-08. The reduction in WPR for both male and female children in rural areas was from 6 per cent in 1993-94 to 2 per cent in 2007-08. In the urban areas, the reduction in WPR for male children was from 4 per cent in 1993-94 to 2 per cent in 2007-08 and for female children from 3 per cent to 1 per cent.

- In *usual status (ps+ss),* among rural males, WPR was the highest (57 per cent) among the scheduled tribe (ST) while it was the lowest (54 per cent) among scheduled caste (SC) and other backward class (OBC). Female WPR, in the rural areas, was the highest for ST (40 per cent) and the lowest for 'others'(22 per cent).

- Among urban males, WPR according to *usual status* was the highest for SC and 'others' '(56 per cent each) while WPR was the lowest among the ST (51 per cent). Female WPR, in the urban areas, was the highest among the ST (20 per cent) and the lowest among the 'others' (12 per cent).

- *Self-employment* status was dominant for both males and females in both rural and urban area. In rural India, more than half of the usually employed ('all' workers) were *self-employed* – 55 per cent among males and nearly 58 per cent among females. The corresponding figures in urban India were 43 per cent for males and 42 per cent for females.

- The percentage of *regular wage/salaried employees* was relatively lower among females as compared to males in both rural and urban India. The proportion of *regular wage/salaried* persons was 9 per cent for males and 4 per cent for females in the rural areas, whereas in urban areas, these figures were 42 per cent and 38 per cent respectively.

- The share of the *casual labourers* in total workforce was much higher in the rural areas than in the urban areas. In the rural areas, nearly 36 per cent of male workers and 38 per cent of female workers, were *casual labourers*. In the urban areas, nearly 15 per cent of male workers and 20 per cent of female workers were casual labourers.

- In rural India, among the *usually employed (ps+ss),* about 67 per cent of males and 84 per cent of females were engaged in agriculture sector. The corresponding figures in 1977-78 were 81 per cent and 88 per cent, respectively.

- In urban India, the 'trade, hotel and restaurant' sector engaged about 28 per cent of the male workers, while in 'manufacturing' nearly 24 per cent of the male workers were engaged. During 1977-78 to 2007-08, the proportion of urban males engaged in 'manufacturing' decreased from 28 per cent to 24 per cent while the increase for 'trade, hotel & restaurant' during this time period was from 22 per cent to 28 per cent.

- For urban females, 'other services' sector accounted for the highest proportion (38 per cent) of workers, followed by manufacturing (28 per cent) and agriculture (15 per cent).

- Since 1977-78, the proportion of urban females employed in 'agriculture' fell by nearly 17 percentage points (from 32 per cent in 1977-78 to 15 per cent in 2007-08).

- Compared to the urban areas, in the rural areas, a very high percentage of persons were engaged in subsidiary economic activity. About 14 per cent of rural population and 2 per cent of urban population were engaged in subsidiary economic activity.

- In the rural areas, engagement in subsidiary economic activity was more prevalent among those classified as workers in the usual principal activity status. Nearly 25 per cent of rural male workers (as per PS) and 24 per cent of rural female worker (as per PS) were engaged in subsidiary economic activity.

- Considerable gender differentials in the wage rates (per day) for *regular wage/salaried* employees were observed. The average wage rate for *regular wage/salaried* employees, of age 15-59 years, in rural areas was 175.30 for males and Rs. 108.14 for females and in the urban areas, male wage rate was Rs. 276.04 against the female wage rate of Rs. 212.86.

- The wage rate for *casual labour in public works* was significantly higher than that for the *casual labours in other than public works*.

- In the rural areas, the wage rate, for workers of age 15-59 years, engaged as *casual labour in public works other than Mahatma Gandhi NREG (MGNREG) public works* was Rs. 74.45 and for *MGNREG public works*, was Rs. 78.91. On the other hand, the wage rates, for workers of age 15-59 years, engaged as *casual labour in other than public works* was Rs. 60.33 in the rural areas and Rs. 72.24 in urban areas.

- No male-female disparity in the wage rates for *casual labours in MGNREG public works* existed and the disparity was almost negligible in case of *casual labour in other than MGNREG public works*. However, considerable male-female and rural-urban disparities in wage rate existed among the *casual labours in other type of works.*

- In the rural areas, average male wage rate (of workers of age 15-59 years) for *casual labour other than MGNREG public works* was Rs. 76.02 and it was Rs. 70.66 for females.

- There was no gender differential in wage rate for *casual labour in MGNREG public works*, the wage rate (of workers of age 15-59 years) was nearly Rs. 79.00 for both male and female.

- The percentage share of person-days in rural casual labour in public works during NSS 64th round was four times higher than that observed in NSS 61st round. In the rural areas, share of person-days in *MGNREG public works* and *other public works* in total *casual labour* person-days for male and female combined was 3.2 per cent.

- In the rural sector, on an average, Rs. 66.59 was earned in a day by a male casual labourer (of age 15-59 years) engaged in *casual labours other than public works*, whereas a female casual labourer earned Rs. 48.41 a day – showing a difference of about Rs. 18. In the urban areas, a male *casual labourer engaged in works other than public works* earned Rs. 86.58 in a day and a female, Rs. 51.34 in a day.

C. Unemployment Rate

- At the all-India level, unemployment rate was nearly 8 per cent in the *cds* approach. The unemployment rate stood at nearly 4 per cent in *cws* and 2 per cent in the *usual status approach*, i.e., in *usual (adj.).*

- The unemployment rates for the urban areas in the *usual (adusted.) status* approach was 4 per cent compared to 2 per cent in the rural areas and 5 per cent in *cws* in the urban areas compared to 4 per cent in the rural areas. In *cds* the rate was nearly 7 per cent in the urban areas and 8 per cent in the rural areas.

- In the rural areas, generally, the female unemployment rate was lower than the male unemployment rate, in all the approaches of measurement, but this trend was reverse in the case of urban areas.

- In the rural areas, female unemployment rate stood at 8 per cent in *cds* compared to 9 per cent for males while in the urban areas, female unemployment rate in the *cds* was nearly 10 per cent which was 3 percentage point higher compared to male unemployment rate.

D. Underemployment

- The proportion of *usually employed* males (*ps+ss*) who are found to be not employed (*unemployed+not in the labour force*) during the week preceding the date of survey (*current weekly status*) was 4 per cent in the rural and 2 per cent in the urban areas. The proportion of *usually employed* females (*ps+ss)* not employed (*unemployed+ not in the labour force*) during the week preceding the date of survey was as high as 19 per cent in the rural and 7 per cent in urban areas.

- The proportion of person- days without work (*unemployed+ not in the labour force*) of the *usually employed (ps+ss*) was about 36 per cent and 19 per cent for females in rural and urban areas respectively as against 11 and 5 per cent for males in rural and urban areas respectively.

- The percentage of person-days on which persons with some work during the reference week (according to the *current weekly status*) were without work (u*nemployed+not in the labour force*) was about 7 for rural males, 21 per rural females, 3 for urban males and 12 for urban females.

- The above approximate indicators of rate of underemployment indicate that the incidence of underemployment was higher in rural than urban and higher for females than for males.

Chapter One

Introduction

1.0 The report in perspective

1.0.1 An all-India survey on the situation of employment and unemployment and migration particulars in India was carried out during NSS 64th round (July, 2007 to June, 2008). The collection of information on employment and unemployment particulars was as a part of the annual series of the National Sample Survey Organisation (NSSO) which was started in NSS 60th round and repeated in NSS 62nd round. In between NSS 60th and NSS 62nd round, the seventh quinquennial round of NSS was conducted in NSS 61st round (2004-05). The overall sample size for NSS 64th round was comparable with that of NSS 61st round but was on the lower side in NSS 62nd round. However, the designs of these three rounds were different. NSS 61st and 64th rounds were oriented towards demographic design while the design of NSS 62nd round design was enterprise based.

1.0.2 In this round, the scope of the survey on employment and unemployment was enhanced with the collection of information on migration particulars of the households, of the household members and of the out-migrants. In this survey, a nation-wide enquiry was conducted in a moderately large sample of households to provide estimates on various characteristics pertaining to employment and unemployment and migration particulars in India and some characteristics associated with them at the national and state levels. Information on various facets of employment and unemployment and migration in India were collected through a schedule of enquiry (Schedule 10.2). Based on the data collected during the survey period, estimates pertaining to employment-unemployment in India along with various characteristics associated with these have been presented in this report.

1.1 Background

1.1.1 *Past Surveys*: To assess the volume and structure of employment and unemployment, starting with the 9th round (May-September, 1955), NSSO conducted a number of surveys on employment and unemployment. To give a firm conceptual framework for conducting such surveys, the Planning Commission, in the year 1970, set up an 'Expert Committee on Unemployment Estimates', (popularly known as the Dantwala Committee), which reviewed these surveys and the indicators generated from such surveys. Based on concepts and definitions recommended by this Committee, the first quinquennial survey on employment and unemployment was conducted in the 27th round of NSS. After the 27th round, quinquennial surveys on employment and unemployment situation in India have been carried out by the NSSO, during the 32nd round (July 1977 - June 1978), 38th round (January 1983 - December 1983), 43rd round (July 1987 - June 1988), 50th round (July 1993 - June 1994), 55th round (July 1999 - June 2000) and 61st round (July 2004 - June 2005) in which concepts, definitions and procedures were based primarily on the recommendations of the Dantwala Committee. The results of these surveys have been brought out in the form of NSS reports.

1.1.2 *Other surveys on employment-unemployment*: Apart from these quinquennial surveys on employment and unemployment, NSSO has been regularly collecting information on certain key items on employment and unemployment, as a part of annual series, from a smaller sample of households in each round since its 45th round (July 1989 - June 1990) through the schedule on Household Consumer Expenditure (Schedule 1.0). The objective of data collected in the annual series was, measuring employment and unemployment indicators in terms of the usual

and current weekly statuses only, and study of these indicators in respect of category of employment, industrial distribution of the usually employed, etc. These procedures continued till the 59th round of NSS. In the NSS 60th round survey, there was a significant change in respect of the procedure of data collection and content of information as compared to the earlier annual rounds. In the NSS 60th round and in NSS 62nd round, a separate schedule (Schedule 10) on employment and unemployment was canvassed in a separate set of sample household to enable providing estimates of employment and unemployment on the basis of current daily status approach also.

1.2 Scope of the present survey

1.2.1 *Subject coverage*: The 64th round (July 2007-June 2008) of NSS was earmarked for survey on 'Employment-Unemployment and Migration', 'Participation and expenditure in Education' and 'Household Consumer Expenditure'. In this survey, information on various facets of employment and unemployment as well as on migration in India was collected through the employment-unemployment schedule (Schedule 10.2). In terms of subject coverage for employment and unemployment part of the schedule, this survey is broadly similar to the NSS 60th round and NSS 62nd round surveys on employment and unemployment in which a separate schedule on employment and unemployment was canvassed in the annual rounds. The facsimile of Schedule 10.2 used in the NSS 64th round is given in Appendix C.

1.2.2 *Items of enquiry*: In Schedule 10.2 of NSS 64th round (July 2007 – June 2008) information was collected regarding the employment-unemployment characteristics and migration particulars.

1.2.2.1 NSSO collected data on employment-unemployment characteristics, based on which, estimates of employment and unemployment, measured in terms of three basic approaches, viz., usual status, current weekly status and current daily status can be obtained. The reference period for these approaches differ - it being 365 days preceding the date of survey for 'usual status', 7 days preceding the date of survey for 'current weekly status' and each day of the 7 days preceding the date of survey for 'current daily status'. Data were collected on the activity status of all persons, i.e. for workers, for those seeking or available for work and also for those remaining out of labour force. A worker could be self-employed or enjoy regular salaries/wages or be employed on casual wage basis. Data on this aspect, along with the industry of work of the worker and his/her occupation, were collected during this survey. In order to reveal the multi-dimensional features of the employment-unemployment situation in India, information on several correlates pertaining to it were also gathered. For the purpose of collection of information on industry of activity, National Industrial Classification (NIC), 2004 and National Classification of Occupation (NCO) 2004 was used in this survey. The concepts used to collect data on employment-unemployment are similar to those used in the usual quinquennial rounds.

1.2.2.2 In the present survey, migration particulars of the households and the household members were also collected through Schedule 10.2 (Employment & Unemployment and Migration Particulars). Regarding households which have migrated to the place of enumeration during the last 365 days, particulars such as location of last usual residence, pattern of migration and reason for migration were collected. Particulars of out-migrants who migrated out to other village/ town, from the household, any time in the past, such as present place of residence, reason for migration, period since leaving the household, whether presently engaged in any economic activity, whether sent remittances, number of times and amount of remittances sent during last 365 days to the households by such former members who had migrated out were collected. Information on the use of remittances received by the households during last 365 days from the members who migrated out any time in the past was also collected. From

each of the sample migrants, information on reason for migration, period elapsed since migration, location of last usual place of residence, usual activity pursued at the time of migration, whether a return migrant, etc., was collected. In this survey, to assess the short duration movements of the people of India, for the household members who had stayed away for employment or in search of employment for a period of 30 days to 6 months, information on number of spells of duration of 15 days or more, destination for longest spell and industry of work, if worked, were collected.

1.2.3 *Geographical Coverage:* The survey covered the whole of the Indian Union *except* (i) Leh (Ladakh) and Kargil districts of Jammu & Kashmir (for central sample), (ii) interior villages of Nagaland situated beyond five kilometres of the bus route and (iii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year.

1.3 The survey outline

1.3.1. *Method of data collection*: The survey used the recalled-based interview method using a schedule for data collection from a sample of randomly selected households. The sample design on the basis of which the selection of households was made is stated in brief in the following sub-section.

1.3.2 *Period of survey and work programme*: The fieldwork of 64th round of NSSO started from 1st July, 2007 and continued till 30th June, 2008. As usual, the survey period of this round was divided into four sub-rounds, each with a duration of three months, the 1st sub-round period ranging from July to September, 2007, the 2nd sub-round period from October, 2007 to December, 2007, 3rd sub-round from January, 2008 to March, 2008 and 4th sub-round from April, 2008 to June, 2008. An equal number of sample villages/blocks (FSUs), as far as possible, were allotted for survey in each of these four sub-rounds.

1.4 Sampling design

1.4.1 *An outline of the sampling design*: A stratified multi-stage design was adopted for the 64th round survey. The first stage units (FSU) were the 2001 census villages (Panchayat wards in case of Kerala) in the rural sector and Urban Frame Survey (UFS) blocks in the urban sector. However, for the newly declared towns and out growths (OGs) in Census 2001 for which UFS were not done, each individual town/ OG were considered as an FSU. The ultimate stage units (USU) were the households in both the sectors. In case of large FSUs, i.e. villages/ towns/ blocks requiring hamlet-group (hg)/ sub-block (sb) formation, one intermediate stage was the selection of two hgs/ sbs from each FSU. Details of the sample design and estimation procedure is given in Appendix B.

1.4.2 *Sample Size – first stage units*: At the all-India level, 12,688 FSUs (7,984 villages and 4,704 urban blocks) was allocated for survey. The total number of sample FSUs was allocated to the States and UTs in proportion to population as per Population Census 2001 subject to a minimum sample allocation to each State/ UT. While doing so, the resource availability in terms of number of field investigators was kept in view. The State/ UT level sample size was allocated between rural and urban sectors in proportion to population as per *Census 2001* with 1.5 weightage to urban sector subject to the restriction that urban sample size for bigger states like Maharashtra, Tamil Nadu, etc., did not exceed the rural sample size. A minimum of 8 FSUs were allocated to each state/ UT, separately, for rural and urban areas. Further, the State level allocation for both rural and urban sectors were adjusted marginally in a few cases to ensure that each stratum got a minimum allocation of 4 FSUs. Within each sector of a State/ U.T., the respective sample size was allocated to the different strata in proportion to the stratum

population as per census 2001. Allocations at stratum level were adjusted to a multiple of 4 with a minimum sample size of 4. Out of these 12,688 FSUs allotted for survey, 12,589 FSUs could be surveyed – 7,921 in rural and 4,668 in urban. Note that in the 64th round, a sample of 13,600 FSUs (8,304 villages and 5,296 urban blocks) was also selected for survey by the state agencies (State sample) at the all-India level.

1.4.3. *Sample size – second stage units*: For Schedule 10.2, a sample of 10 households was planned for survey from each selected village and urban block. In the Central sample, 1,25,578 households were actually surveyed – 79,091 in rural areas and 46,487 in urban areas. As regards the actual number of persons surveyed, it was 3,74,294 in the rural sector and 1,97,960 in the urban sector.

1.5 Contents of the Report

1.5.1 All the estimates presented in this report are based on the Central sample data only. This report deals, in some details, with the employment-unemployment estimates measured in terms of the three basic approaches of usual status, current weekly status and current daily status and their patterns along with their correlates. It also covers some aspects of underemployment. The report gives the results generated at all-India level and some important results for different States/ Union Territories.

1.5.2 As stated earlier, this report deals with various estimates on employment and unemployment along with their correlates as obtained from data collected on relevant items for the entire round. Consequently, all discussions in this report are limited to only such items/concepts, based on which estimates have been generated. A detailed explanation of these is given in the next chapter entitled 'Concepts and Definitions'.

1.5.3 This report contains three chapters, including the present introductory chapter, and four appendices. Chapter Two states in detail the concepts and definitions of terms used in the survey in connection with the various items covered in this report. Chapter Three discusses the main findings of the survey. While the detailed tables based on which this report is brought out are presented in the Appendix A, the sample design and the estimation procedure is given in Appendix B. The facsimile of the schedule is given in Appendix C. In Appendix D, the Projected Population as on 1st March 2007 and 1st March 2008 supplied by RGI Office have been presented along with those projected for 1st January 2008 using compound rate of growth. The projections have been given for, male and female, separately, for rural and urban for each State/U.T.

1.6 Plan for release of results

1.6.1 It has been planned to bring out two reports on the basis of data collected in Schedule 10.2 (Employment & Unemployment and Migration particulars) of NSS 64th. The present report - first in the series of two reports - deals in some detail, with the employment-unemployment estimates measured in terms of the three basic approaches of *usual status(us)*, *current weekly status* (*cws*) and *current daily status (cds)* and their patterns along with their correlates. It also covers some aspects of underemployment. The report gives the results generated at all-India level and some important results for different states/union territories. The other report planned to be released is 'Migration in India: 2007-08', in which various aspects of household migration, features of out-migrants, receipt and use of remittances by the households, migration particulars of the household members, etc., have been discussed.

Chapter Two

Concepts and Definitions

2.0 The concepts and definitions of some important terms used in the survey and relevant to this report are explained in the following paragraphs.

2.1 ***Household*****:** A group of persons who normally lived together and took food from a common kitchen constituted a household. The adverb "normally" means that temporary visitors and guests (whose total period of stay in the household was expected to be less than 6 months) were excluded but temporary stay-aways (whose total period of absence from the household was expected to be less than 6 months) were included. Thus a child residing in a hostel for studies was excluded from the household of his/her parents, but a resident domestic servant or paying guest (but not just a tenant in the house) was included in the employer's/host's household. "Living together" was given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria were in conflict. However, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to shortage of space, the household formed by such a person's family members was taken to include the person also. Each inmate of a hotel, mess, boarding-lodging house, hostel, etc., was considered to be a single-member household except that a family living in a hotel (say) was considered one household only. The same principle was applicable for the residential staff of such establishments. The size of a household is the total number of persons in the household.

2.2 ***Age (years)*****:** The age in completed years, as on the date of survey, of the household members were recorded.

2.3 ***Household type***: The household types were assigned on the basis of the sources of the household's income during the last 365 days preceding the date of survey. For this purpose, only the household's income from economic activities was considered. The income of servants and paying guests was not taken as the income of the household. Household types have been arranged as follows:

For **rural** areas, household types (codes are given in brackets) were as follows:

self-employed in:
- agriculture (4),
- non-agriculture (1),

rural labour:
- agricultural labour (2),
- other labour (3),

residual other households (9).

For **urban** areas, the household types (codes are given in brackets) were as follows:

- self-employed (1),
- regular wage/salary earning (2),
- casual labour (3),
- residual other households (9) .

2.3.1 ***Procedure for assigning household type codes in rural sector***: For a **rural** household, if a single source (among the five sources of income listed in preceding paragraph) contributed 50% or more of the household's income from economic activities during the last 365 days, the type code (1, 2, 3, 4 or 9) corresponding to that source was assigned.

For a household to be classified as 'agricultural labour' or 'self-employed in agriculture' (code 2 or 4) its income from that source must be 50% or more of its total income. If there is no such source yielding 50% or more of the household's total income, code 1, 3 or 9 was given according to the following procedure:

To be classified as self-employed in non-agriculture (code 1), the household's income from that source must be greater than its income from rural labour (all wage-paid manual labour) as well as that from all other economic activities put together (a three-way division is to be considered here).

A household not getting code 1, 2 or 4 is to be classified as other labour (code 3) if its income from rural labour (all wage-paid manual labour) was greater than that from self-employment as well as that from other economic activities (again a three-way division). All other households were given type code 9.

2.3.2 For **urban** areas the different urban household type codes correspond to four sources of household income, unlike the rural sector where five sources were considered. An urban household was assigned the type code 1, 2, 3 or 9 corresponding to the major source of its income from economic activities during the last 365 days. For a household, which did not have any income from economic activities, type code 9 (residual other households) was assigned.

2.4 ***Monthly per capita consumer expenditure (MPCE):*** For a household, this is the total consumer expenditure over all items divided by the household size and expressed on a per month (30 days) basis. A person's MPCE is understood as that of the household to which he or she belongs.

2.4.1 It may be noted that some of the employment and unemployment characteristics, in this report, have been studied with the 'level of living', of the household members. Thus, the distribution of population by 'income level' is considered as a useful background information for the study of employment and unemployment. As it is difficult to collect reliable income data, the NSSO, collects data on consumption expenditure in its surveys. In the present survey on *Employment & Unemployment and Migration Particulars (Schedule 10.2),* data on consumption expenditure was collected through a separate work-sheet which was integrated with *Schedule 10.2* (see Appendix C). The work-sheet is an abridged version of the detailed schedule used for collecting information of household consumer expenditure in the *consumer expenditure survey*. The estimate of MPCE derived based on worksheet may not converge to the corresponding estimates derived through main enquiry schedules of household consumer expenditure (Schedule 1.0). The abridged work-sheet was used to reduce the respondent fatigue. Based on the abridged work-sheet, monthly per capita consumer expenditure was worked out for each sample household, which is expected to serve as a close proxy for income and facilitates ordering the households and persons thereof in the hierarchy of their level of living.

2.4.1.1 ***Decile classes of MPCE*****:** The first decile of the distribution of MPCE over the population of any region or domain is the level of MPCE below which 10 per cent of the population lie, the second decile, the level below which 20 per cent of the population lie, and so on. Thus, the population can be divided into 10 "decile classes of MPCE" as follows: MPCE up to the 1st decile, from 1st decile to the 2nd decile, from the 2nd decile to the 3rd decile, and so on. Estimates of employment and unemployment parameters for each of the decile class help to

portray the variation of such variables with variation in MPCE. In this round, decile classes are used in all-India tables and are formed separately for the rural and urban sector of India.

2.4.1.2 ***Quintile classes of MPCE*:** The population of any region or domain can be divided into five quintile classes of MPCE, where the 1st quintile of the distribution of MPCE means the level of MPCE below 20 per cent of the population lie, the second quintile, the level below which 40 per cent of the population lie, and so on. In this round quintiles are estimated separately for the distribution of MPCE in the rural and urban sector of each State/U.T.

2.4.1.3 ***Procedure for collecting monthly per capita consumer expenditure (MPCE)*:** A worksheet was used for collection of information on household consumer expenditure in Schedule 10.2 to get a proxy for total household consumer expenditure, The approximate value of consumer expenditure obtained through the worksheet has been used for studying employment and unemployment characteristics of the household members. The worksheet contained 19 different components of household consumer expenditure. Depending upon the type of item, either of the two reference periods viz,. 30 days and 365 days, was used to record consumption of different groups of items. Conceptual framework and approach to record household consumer expenditure through the worksheet is similar to the one adopted for detailed household consumer surveys carried out by NSSO.

2.5 ***General educational level*:** A person was considered as literate if he/she could both read and write a simple message with understanding in at least one language. For all the individuals who were found to be literate, the general level of education was collected in terms of highest level of education successfully completed. Highest level of education successfully completed by each member of the household was decided by considering his/ her all general/ technical/ vocational educational level and was recorded in terms of 13 categories viz. *(i) not literate, (ii) literate without any schooling, (iii) literate without formal schooling: (a) Non-formal Education Courses (NFEC)/ Alternative Innovative Education Programme (AIEP), (b) Total Literacy Campaign (TLC)/ Adult Literacy Centres (AEC), (c) others; literate with formal schooling including EGS (iv) below primary, (v) primary, (vi) upper primary/middle, (vii) secondary, (viii) higher secondary, (ix) diploma/certificate course, (x) graduate, and (xi) postgraduate and above*. The criterion for deciding primary, upper primary/ middle, secondary, etc., levels were the same that had been followed in the concerned states/union territories. The category 'diploma or certificate course' meant diploma or certificate courses in general education, technical education or vocational education, which is below graduation level. Diploma or certificate courses in general education, technical education or vocational education, which is equivalent to graduation level, was considered under the category 'graduate'. Similarly, diploma or certificate courses in general education, technical education or vocational education, which is equivalent to post-graduation level and above were considered under the category 'post-graduate and above'. It may be noted that the persons with general education level '*secondary and above'* have been referred to as '*educated persons'* in this report.

2.6 ***Technical educational level*:** The highest level of technical education successfully completed by each member of the household was recorded in terms of 6 categories viz. *(i) no technical education, (ii) technical degree (graduate level) in agriculture/ engineering/ technology/ IT/medicine/management, (iii) technical degree (postgraduate and above level) in agriculture/ engineering/ technology/ IT/ medicine/ management, etc., (iv) diploma or certificate (below graduate level) in agriculture/ engineering/ technology/IT/ medicine/ management, etc.,* (*v) diploma or certificate (graduate level) in agriculture/ engineering/ technology/IT/ medicine/ management, etc., and (vi) diploma or certificate (postgraduate and above level) in agriculture/ engineering/ technology/IT/ medicine/ management, etc.* Technical diploma or certificate in 'other subjects' included diploma or certificate in management, applied arts, etc.

2.7 ***Public works*:** 'Public works' were those activities which were sponsored by Government or Local Bodies, and which covered local area development works like construction of roads, dams, bunds, digging of ponds, etc., as relief measures, or as an outcome of employment generation schemes under the poverty alleviation programme such as *Mahatma Gandhi National Rural Employment Guarantee* (MGNREG) public works, Sampoorna Grameen Rozgar Yojana (SGRY), National Food for Work Programme (NFFWP), etc. The coverage of schemes under 'public works' was restricted to those schemes through which the Government generated wage employment under poverty alleviation programme, or relief measures. The types of works that were generally undertaken through these schemes, were watershed development, drought proofing, land levelling, flood control, laying pipes or cables, sanitation, water harvesting, irrigation canal, development of orchard, road construction, building construction / repair, running crèche, etc. To distinguish between *'public works'* and works not classifiable as *'public works'*, some broad characteristics of '*public work'* were identified, viz. the primary objective is generation of wage employment and poverty alleviation, and creation of community asset as an outcome in achieving those main objectives. It is to be noted that the existing activity status code 41 (casual wage labour in public works) was split into two codes for assigning activity status codes as per current daily activity status and current weekly activity status, as follows:

(i) worked as casual wage labour in public works other than Mahatma Gandhi National Rural Employment Guarantee (MGNREG) public works – 41

(ii) worked as casual wage labour in Mahatma Gandhi National Rural Employment Guarantee (MGNREG) public works – 42

However, in the usual activity status, code 41 was used for casual wage labour in public works, which included all types of public works and code 42 was not applicable in the usual activity status.

2.8 ***Economic activity***: The entire spectrum of human activity falls into two categories – economic activities and non-economic activities. Any activity resulting in production of goods and services that add value to national product was considered as an economic activity for the employment and unemployment survey. Such activities included production of all goods and services for market (i.e. for pay or profit) including those of government services, and, the production of primary commodities for own consumption and own account production of fixed assets.

2.8.1 The full spectrum of economic activities as defined in the UN system of National Accounts (1993) was not covered in the definition adopted for the NSS 64th round survey of Employment and Unemployment. Production of any good for own consumption is considered as economic activity by UN System of National Accounts (UNSNA 1993) but production of only primary goods for own consumption was considered as economic activity by NSSO. While the former considers activities like own account processing of primary products as economic activities, in the NSS surveys, processing of primary products for own consumption was not considered as economic activity.

2.8.2 The term 'economic activity' as defined in the employment and unemployment survey of NSS 64th round, therefore, included:

(i) all the market activities performed for pay or profit which result in production of goods and services for exchange.
(ii) of the non-market activities,

(a) all the activities relating to the primary sector (i.e. industry Divisions 01 to 14 of NIC-2004) which result in production (including free collection of uncultivated crops, forestry, firewood, hunting, fishing, mining, quarrying, etc.) of primary goods for own consumption

and

(b) activities relating to the own-account production of fixed assets, which include production of fixed assets includes construction of own houses, roads, wells, etc., and of machinery, tools, etc., for household enterprise and also construction of any private or community facilities free of charge. A person may be engaged in own account construction in the capacity of either a labourer or a supervisor.

As per the practice followed in earlier rounds, certain activities like prostitution, begging, etc., which though fetched earnings, were not considered as economic activities. Activity status of a person was judged irrespective of the situation whether such activity was carried out illegally in the form of smuggling or not.

2.9 ***Activity status***: It is the activity situation in which a person was found during the reference period with regard to the person's participation in economic and non-economic activities. According to this, a person could be in one or a combination of the following three broad activity statuses during a reference period:

(i) working or being engaged in economic activity (work) as defined above,

(ii) being not engaged in economic activity (work) but either making tangible efforts to seek 'work' or being available for 'work' if 'work' is available and

(iii) being not engaged in any economic activity (work) and also not available for 'work'.

Broad activity statuses mentioned in (i) and (ii) above are associated with 'being in labour force' and the last with 'not being in the labour force'. Within the labour force, broad activity status (i) and (ii) were associated with 'employment' and ‘unemployment’, respectively.

2.9.1 Identification of each individual in terms of a unique activity status could pose a problem when more than one of the three broad activity statuses listed above were concurrently obtained for a person. In such an eventuality, the identification uniquely under any one of the three broad activity statuses was done by adopting either *the major time* or *priority criterion.* The former was used for classification of persons according to the 'usual activity status' approach and the latter for classification of persons according to the ‘current activity status’ approach. Each of the three broad activity statuses was further sub-divided into several detailed activity categories. If a person categorised as engaged in economic activity by adopting one of the two criteria mentioned above was found to be pursuing more than one economic activity during the reference period, the appropriate detailed activity status code related to that activity in which relatively more time had been spent. A similar procedure was adopted for assigning detailed activity code for persons categorised as engaged in non-economic activity and pursuing more than one non-economic activities.

2.9.2 The detailed activity statuses under each of the three broad activity statuses (viz. employed, unemployed and not in labour force) and the corresponding codes used in the survey are given below:

code	description
	working (or employed)
	self-employed
11	worked (self-employed) in household enterprises as own-account worker
12	worked (self-employed) in household enterprises as an employer
21	worked (self-employed) in household enterprises as helper
	regular wage/ salaried employee
31	worked as regular wage/salaried employee
	casual labour
41	worked as casual wage labour in public works other than Mahatma Gandhi NREG public works
42	worked as casual wage labour in Mahatma Gandhi NREG public works
51	worked as casual wage labour in other types of works
61	did not work owing to sickness though there was work in household enterprise
62	did not work owing to other reasons though there was work in household enterprise
71	did not work owing to sickness but had regular salaried/wage employment
72	did not work owing to other reasons but had regular salaried/wage employment
	not working but seeking/available for work (or unemployed)
81	sought work or did not seek but was available for work (for usual status approach)
81	sought work (for current weekly status approach)
82	did not seek but was available for work (for current weekly status approach)
	neither working nor available for work (or not in labour force)
91	attended educational institutions
92	attended to domestic duties only
93	attended to domestic duties and was also engaged in free collection of goods (vegetables, roots, firewood, cattle feed, etc.), sewing, tailoring, weaving, etc. for household use
94	rentiers, pensioners, remittance recipients, etc.
95	not able to work owing to disability
97	others (including beggars, prostitutes, etc.)
98	did not work owing to sickness (for casual workers only)
99	children of age 0-4 years

It may be noted that codes 61, 62, 71, 72, 82 and 98 were applicable for current weekly status and current daily status approaches only. Moreover, activity status code 41 in the usual status is used for casual wage labour in all types of *public works*, whereas in the current activity status, code 41 is for casual wage labour in *public works* other than MGNREG public works and code 42 is for casual wage labour in MGNREG public works.

2.10 ***Workers (or employed)***: Persons who were engaged in any economic activity or who, despite their attachment to economic activity, abstained from work for reason of illness, injury or other physical disability, bad weather, festivals, social or religious functions or other contingencies necessitating temporary absence from work, constituted workers. Unpaid helpers who assisted in the operation of an economic activity in the household farm or non-farm activities were also considered as workers. Relevant activity status codes within 11 to 72 were assigned for workers. Workers were further categorized as *self-employed (*relevant activity

status codes: 11, 12, 21, 61, 62)*, regular salaried/wage employee (*relevant activity status codes: 31, 71, 72)*,* and *casual wage labour (*relevant activity status codes: 41, 42 and 51)*.*

2.11 ***Seeking or available for work (or unemployed)***: Persons who, owing to lack of work, had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work under the prevailing conditions of work and remuneration, were considered as those 'seeking or available for work' (or unemployed). Activity status codes 81 or 82 were assigned for unemployed.

2.12 ***Labour force***: Persons who were either 'working' (or employed) or 'seeking or available for work' (or unemployed) constituted the labour force. Persons with activity status codes 11 – 82 constituted the labour force.

2.13 ***Not in labour force***: Persons who were neither 'working' nor 'seeking or available for work' for various reasons during the reference period were considered as 'not in labour force'. Persons under this category are students, those engaged in domestic duties, rentiers, pensioners, recipients of remittances, those living on alms, infirm or disabled persons, too young persons, prostitutes, etc. and casual labourers not working due to sickness. Activity status codes 91-95, 97 and 98 were assigned for persons belonging to category 'not in labour force'.

2.14 ***Self-employed***: Persons who operated their own farm or non-farm enterprises or were engaged independently in a profession or trade on own-account or with one or a few partners were deemed to be self-employed in household enterprises. The essential feature of the self-employed is that they have *autonomy* (decide how, where and when to produce) and *economic independence* (in respect of choice of market, scale of operation and finance) for carrying out their operation. The remuneration of the self-employed consists of a non-separable combination of two parts: a reward for their labour and profit of their enterprise. The combined remuneration is wholly determined by the revenue from sales after netting out value of purchased inputs used in production.

2.14.1 *Categories of self-employed persons*: Self-employed persons were categorised as follows:

(i) ***own-account workers***: those self-employed persons who operated their enterprises on their own account or with one or a few partners and who, during the reference period, by and large, ran their enterprise without hiring any labour. They could, however, have had unpaid helpers to assist them in the activity of the enterprise;

(ii) ***employers***: those self-employed persons who worked on their own account or with one or a few partners and, who, by and large, ran their enterprise by hiring labour; and

(iii) ***helpers in household enterprise***: those self-employed persons (mostly family members) who were engaged in their household enterprises, working full or part time and did not receive any regular salary or wages in return for the work performed. They did not run the household enterprise on their own but assisted the related person living in the same household in running the household enterprise.

2.15 ***Regular wage/salaried employee***: These were persons who worked in others' farm or non-farm enterprises (both household and non-household) and, in return, received salary or wages on a regular basis (i.e. not on the basis of daily or periodic renewal of work contract). This category included not only persons getting time wage but also persons receiving piece wage or salary and paid apprentices, both full time and part-time.

2.16 ***Casual wage labourer***: A person who was casually engaged in others' farm or non-farm enterprises (both household and non-household) and, in return, received wages according to the terms of the daily or periodic work contract, was a casual wage labourer.

2.17 **Different approaches followed to determine activity status:** The persons surveyed were classified into various activity categories on the basis of the activities pursued by them during certain specified reference periods. There were three reference periods for this survey. These are: (i) one year (ii) one week and (iii) each day of the reference week. Based on these three periods, three different measures of activity status are arrived at. These are termed respectively as usual status, current weekly status and current daily status. As such the procedures adopted to arrive at the usual status and current daily status are elucidated below.

2.17.1 ***Usual principal activity status****:* The usual activity status relates to the activity status of a person during the reference period of 365 days preceding the date of survey. The activity status on which a person spent relatively longer time (i.e. major time criterion) during the 365 days preceding the date of survey is considered as the *usual principal activity status* of the person. To decide the usual principal activity of a person, first a two stage dichotomous classification was followed for determining the broad usual principal activity status (employed or unemployed or not in labour force) of the person. At the first stage, persons were first categorised as those in the *labour force* (either employed or unemployed) and those *not in the labour force* depending on the major time spent during the 365 days preceding the date of survey. Persons thus adjudged as not belonging to the labour force were assigned the broad activity status 'neither working nor available for work' (*not in the labour force*). At the second stage, for persons belonging to the labour force, the broad activity status of either 'working' (*employed*) or 'not working but seeking and/or available for work' (*unemployed*) was ascertained based on the same criterion viz. relatively longer time spent in accordance with either of the two broad statuses within the labour force during the 365 days preceding the date of survey. Within the broad activity status so determined, the detailed activity status of a person pursuing more than one such activity was determined once again on the basis of the relatively longer time spent on such activities. In terms of activity status codes, codes 11-51 were assigned to persons classified as workers and codes 91-97 to those not in the labour force. In the usual status approach, a single code 81 was assigned to persons seeking or available for work (unemployed persons) while two separate codes 81 (sought work) and 82 (did not seek but was available for work) were assigned to unemployed persons according to current weekly status and current daily status approach.

2.17.2 ***Usual subsidiary economic activity status****:* A person whose usual principal status was determined on the basis of the major time criterion could have pursued some economic activity for a shorter time throughout the reference year of 365 days preceding the date of survey or for a minor period, which is not less than 30 days, during the reference year. The status in which such economic activity was pursued was the subsidiary economic activity status of that person. Activity status codes 11-51 only were used for the subsidiary economic activity performed by a person. It may be noted that engagement in work in subsidiary capacity may arise out of the two following situations:

(i) a person may be engaged in a relatively longer period during the last 365 days in some economic (non-economic) activity and for a relatively minor period, which is not less than 30 days (not necessarily for a continuous period), in another economic activity (any economic activity). The economic activity, which was pursued for a relatively minor period *but not simultaneously with principal activity*, was considered as his/her subsidiary economic activity.

(ii) a person may be pursuing an economic activity (non-economic activity) almost throughout the year in the principal status and also simultaneously pursuing another economic activity (any economic activity) for a relatively shorter time in a subsidiary capacity. The economic activity, which was pursued for a relatively shorter time, was considered as his/her subsidiary economic activity.

2.17.3 ***Usual activity status considering principal and subsidiary status taken together**:* The usual status, determined on the basis of the usual principal activity and usual subsidiary economic activity of a person taken together, is considered as the usual activity status of the person and is written as usual status (ps+ss). According to the usual status (ps+ss), workers are those who perform some work activity either in the principal status or in the subsidiary status. Thus, a person who is not a worker in the usual principal status is considered as worker according to the usual status (ps+ss), if the person pursues some subsidiary economic activity for 30 days or more during 365 days preceding the date of survey.

2.17.4 ***Current weekly activity status**:* The current weekly activity status of a person is the activity status obtaining for a person during a reference period of 7 days preceding the date of survey. It is decided *on the basis of a certain priority cum major time criterion*.

2.17.4.1 According to the *priority criterion*, the status 'working' gets priority over the status 'not working but seeking or available for work' that, in turn, gets priority over the status 'neither working nor available for work'. A person was considered working (or employed) if he/she, while pursuing any economic activity, had worked for at least one hour on at least one day during the 7 days preceding the date of survey. A person was considered 'seeking or available for work (or unemployed)' if, during the reference week, no economic activity was pursued by the person but he/she made efforts to get work or had been available for work any time during the reference week though not actively seeking work in the belief that no work was available. A person who had neither worked nor was available for work any time during the reference week was considered as engaged in non-economic activities (or not in labour force).

2.17.4.2 After deciding the *broad current weekly activity status* of a person on the *basis of 'priority' criterion*, the *detailed current activity status* was then decided *on the basis of 'major time' criterion if that person pursued multiple economic activities*. The current weekly activity status of a person could be any of the valid codes within 11 to 98. Of these codes, 11 to 72 pertained to workers, 81 to 82 for unemployed and 91 to 98 for persons not in the labour force.

2.17.5 ***Current daily activity status*** The activity pattern of the population, particularly in the informal sector, is such that during a week, and sometimes, even during a day, a person could pursue more than one activity. Moreover, many people could even undertake both economic and non-economic activities on the same day of a reference week. The current daily activity status for a person was determined on the basis of his/her activity status on each day of the reference week *using a priority-cum-major time criterion* (day to day labour time disposition). Time disposition was recorded for every member of the sample households. This involved recording of different activities pursued by the members along with the time intensity in quantitative terms for each day of the reference week. The different activities were identified and recorded in terms of 'activity status' and 'industry' codes for persons in urban areas and 'activity status', 'industry' and 'operation' codes for persons in rural areas. The description (and codes used) of current daily activity statuses is the same as those of current weekly activity status. The terms 'industry' and 'operation' are explained later. The following points were considered for assigning the time intensity and determining the current daily status of a person:

i) Each day of the reference week was looked upon as comprising either two 'half days' or a 'full day' for assigning the activity status. For recording time disposition for activities pursued by a person in a day, an intensity of 1.0 was given against an activity that was done for 'full day' and an intensity of 0.5 against the activity which was done for 'half day'.

ii) A person was considered 'working' (employed) for the full day if he/she had worked for 4 hours or more during the day.

iii) If a person was engaged in more than one of the economic activities for 4 hours or more on a day, he/she was assigned two out of the various economic activities on which he/she devoted relatively longer time on the reference day. In such cases, an intensity of 0.5 was given for each of these two economic activities.

iv) If the person had worked for 1 hour or more but less than 4 hours, he/she was considered 'working' (employed) for half-day and 'seeking or available for work' (unemployed) or 'neither seeking nor available for work' (not in labour force) for the other half of the day depending on whether he was seeking/available for work or not.

v) If a person was not engaged in any 'work' even for 1 hour on a day but was seeking/available for work for 4 hours or more, he was considered 'unemployed' for the entire day. But if he was 'seeking/available for work' for more than 1 hour and less than 4 hours only, he was considered 'unemployed' for half day and 'not in labour force' for the other half of the day.

vi) A person who neither had any 'work' to do nor was available for 'work' even for half a day was considered 'not in labour force' for the entire day and was assigned one or two of the detailed non-economic activity statuses depending upon the activities pursued during the reference day.

2.17.6 The current weekly status of a person is derived from the intensities assigned for the daily activities performed by a person during the 7 days of the reference week.

2.18 ***Industry and occupation of the work activity***: For the employed persons, to record the industry of work, 5-digit classification of NIC-2004 was used and to record the type of occupation, 3-digit classification of NCO-2004 was used. To identify certain category of workers under Division 95 (Private households with employed persons) of NIC-2004, eight additional codes were used in the survey viz., housemaid /servant (95001), cook (95002), gardener (95003), gatekeeper/chowkidar/watchman (95004), governess/baby-sitter (95005), tutor (95006), driver (95007) and 'others' (95009). Industry Divisions 96 and 97 of NIC-2004 were not used for the purpose of collection of information on industry of activity. The entire activities described under Division 97 are not under the production boundary of Indian System of National Accounts (ISNA) and are not also considered as economic activities in the NSS survey. A part of the activities under Division 96 (viz., hunting and gathering, farming and the production of shelter), which is within the production boundary of ISNA, is also considered as economic activities in NSS surveys and the industry of these undifferentiated activities were judged in the usual manner as done now, by considering the industry in which major time was spent. Thus, this part of activities got classified against the respective industries under divisions 01-14 relating to the primary sector or 45 relating to construction. The rest of Division 96 is outside the production boundary of ISNA and was not considered as economic activity for the NSS survey. Broad structure of NIC-2004 (Sections and Divisions) have been presented at the end of this Chapter in Annexure I.

2.19 ***Manual work*:** A job essentially involving physical labour was considered as manual work. However, jobs essentially involving physical labour but also requiring a certain level of general, professional, scientific or technical education were not termed as 'manual work'. On the other hand, jobs not involving much of physical labour and at the same time not requiring much educational (general, scientific, technical or otherwise) background were treated as 'manual work'. Thus, engineers, doctors, dentists, midwives, etc., were not considered manual workers even though their jobs involve some amount of physical labour. But, peons, chowkidars, watchman, etc., were considered manual workers even though their work might not involve much physical labour. A few examples of manual workers are cooks, waiters, building caretakers, sweepers, cleaners and related workers, launderers, dry cleaners and pressers, hair dressers, barbers, beauticians, watchmen, gate keepers, agricultural labourers, plantation labourers and related workers

2.20 ***Rural labour**:* Manual labour working in agricultural and /or non-agricultural occupations *in return for wages* paid either in cash or in kind (excluding exchange labour), either of casual or regular basis, and *living in rural areas*, was taken as rural labour.

2.21 ***Wage paid-manual labour**:* A person who did manual work in return for wages in cash or kind or partly in cash and partly in kind (excluding exchange labour) was considered as a wage paid manual labour. Salaries were also counted as wages. A person who was self-employed in manual work was *not treated* as a wage paid manual labour.

2.22 ***Agricultural labour**:* A person was considered as engaged as agricultural labour, if he/she followed one or more of the following agricultural occupations in the capacity of a wage paid manual labour, whether paid in cash or kind or both:

(i) farming,
(ii) dairy farming,
(iii) production of any horticultural commodity,
(iv) raising of livestock, bees or poultry,
(v) any practice performed on a farm as incidental to or in conjunction with farm operations (including forestry and timbering) and the preparation for market and delivery to storage or to market or to carriage for transportation to market of farm produce. Further, 'carriage for transportation' referred *only to the first stage of the transport* from farm to the first place of disposal.

Working in fisheries was *excluded* from agricultural labour.

2.23 ***Wage and salary earnings**:* Information on wage and salary earnings was collected separately for each of the wage/salaried work recorded for a person in a day. Here, earnings referred to the wage/salary income (and not total earnings taking into consideration of all other activities done) received/receivable for the wage/salaried work done during the reference week by a wage/salaried employee and casual labourer. The wage/ salary received or receivable may be in cash or kind or partly in cash and partly in kind. While recording the earnings following conventions were followed.

i) The wages in kind were evaluated at the current retail price.
ii) Bonus and perquisites such as free accommodation, reimbursement of expenditure for medical treatment, free telephones, etc. evaluated at the cost of the employer or at retail prices and duly apportioned for the reference week were also included in earnings.
iii) Amount receivable as 'over-time' for the additional work done beyond normal working time was excluded.

It may be noted that in the survey, at most two activities could be recorded for a person in a day. Therefore, it is possible that a person might have carried out two or more wage/salaried activities in a day, but only one activity or two activities at the most, depending upon the time spent on those activities, was recorded. In that case, the wage/salary income only from that activity(s) was collected and recorded separately, and not the total income of the person from all the activities done for the entire day.

2.24 ***Procedure followed for collecting employment and unemployment particulars in different NSS rounds**:* In the annual rounds from 45th (July 1989-June 1990) to 59th (January to December 2003), only activity status and industry of work according to usual principal status, subsidiary status and current weekly status approach were collected through a few columns of the demographic block of the Consumer Expenditure Schedule (Schedule 1.0). Particulars of employment and unemployment according to the usual principal status and usual subsidiary status were collected in the annual rounds by following a similar approach as in the quinquennial rounds. In the quinquennial rounds, particulars of current daily status of the household members are collected and current weekly status is derived from them, whereas in the annual rounds, current weekly status has been obtained through a direct query. In the 60th

round (January-June 2004), a separate schedule on employment and unemployment was canvassed for the first time in an annual round and particulars on employment and unemployment was colleted in the same manner as that of the quinquennial rounds. In NSS 62nd round (July 2005 - June 2006) also a separate schedule, similar to the one canvassed during NSS 60th round, on employment and unemployment was canvassed and in this round also particulars on employment and unemployment was colleted in the same manner as that of the quinquennial rounds. In the NSS 64th round (July 2007-June 2008) a separate schedule was also used to collect data on employment and unemployment. The scope of the schedule was further enhanced with the inclusion information on the some particulars of the migrant households, migrant household members and out-migrants. In this round also particulars on employment and unemployment was colleted in the same manner as that of the quinquennial rounds.

2.25 ***Labour force participation rate (LFPR):*** LFPR is defined as the number of persons/ person-days in the labour force per 1000 persons /person-days

2.26 ***Worker Population Ratio (WPR)****:* WPR defined as the number of persons/person-days employed per 1000 persons/person-days.

2.27 ***Proportion Unemployed (PU)****:* It is defined as the number of persons/person-days unemployed per 1000 persons/person-days.

2.28 ***Unemployment Rate (UR)****:* UR is defined as the number of persons/person-days unemployed per 1000 persons/person-days in the labour force (which includes both the employed and unemployed).

2.28.1 ***Usual status adjusted UR:*** Unemployment rates for the reference period of 365 days, i.e., in usual *principal status* (*ps*) approximates an indicator of chronically unemployed. Some of the persons categorised as unemployed according to the *usual principal activity status* might be working in a subsidiary capacity. Therefore, another estimate of the unemployed excluding those employed in a subsidiary capacity during the reference period can be derived. The former is called the usually unemployed according to the *principal status* (*ps*) and the latter, the usually unemployed excluding employed in *subsidiary status* or *usual status adjusted* i.e., *us* (*adjusted*), which would conceptually be lower than the former.

2.29 The architecture of key employment-unemployment indicators are given below in tabular form:

<table>
<tr><th colspan="2">activity profile*</th><th rowspan="2">key indicators</th></tr>
<tr><td>activity status (code)</td><td>category of persons</td></tr>
<tr><td>11, 12, 21, 31, 41, 42, 51, 61, 62, 71, 72</td><td>workers</td><td rowspan="3">1. Labour Force Participation Rate (LFPR):
$\frac{no.\ of\ employed\ persons + no.of\ unemployed\ persons}{total\ population}$
2. Worker Population Ratio (WPR):
$\frac{no.\ of\ employed\ persons}{total\ population}$
3. Proportion Unemployed (PU):
$\frac{no.of\ unemployed\ persons}{total\ population}$
4. Unemployment Rate (UR):
$\frac{no.of\ unemployed\ persons}{no.\ of\ employed\ persons + no.of\ unemployed\ persons}$</td></tr>
<tr><td>81, 82</td><td>unemployed</td></tr>
<tr><td>91, 92 93, 94, 95, 97, 98</td><td>not in labour force</td></tr>
<tr><td colspan="3">Note: *: Activity status codes, 42, 61, 62, 71, 72, 82, and 98 are used only in the current status (in CWS and CDS) and the remaining activity status codes are used in both usual in current status</td></tr>

BROAD STRUCTURE OF NIC 2004
(SECTIONS & DIVISIONS)

Section A: Agriculture, hunting and forestry

Division 01: Agriculture, hunting and related service activities
Division 02: Forestry, logging and related service activities

Section B: Fishing

Division 05: Fishing, aquaculture and service activities incidental to fishing

Section C: Mining and quarrying

Division 10: Mining of coal and lignite; extraction of peat
Division 11: Extraction of crude petroleum and natural gas; service activities incidental to oil and gas extraction, excluding surveying
Division 12: Mining of uranium and thorium ores
Division 13: Mining of metal ores
Division 14: Other mining and quarrying

Section D: Manufacturing

Division 15: Manufacture of food products and beverages
Division 16: Manufacture of tobacco products
Division 17: Manufacture of textiles
Division 18: Manufacture of wearing apparel; dressing and dyeing of fur
Division 19: Tanning and dressing of leather; manufacture of luggage, handbags, saddlery, harness and footwear
Division 20: Manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials
Division 21: Manufacture of paper and paper products
Division 22: Publishing, printing and reproduction of recorded media
Division 23: Manufacture of coke, refined petroleum products and nuclear fuel
Division 24: Manufacture of chemicals and chemical products
Division 25: Manufacture of rubber and plastics products
Division 26: Manufacture of other non-metallic mineral products
Division 27: Manufacture of basic metals
Division 28: Manufacture of fabricated metal products, except machinery and equipment
Division 29: Manufacture of machinery and equipment n.e.c.
Division 30: Manufacture of office, accounting and computing machinery
Division 31: Manufacture of electrical machinery and apparatus n.e.c.
Division 32: Manufacture of radio, television and communication equipment and apparatus
Division 33: Manufacture of medical, precision and optical instruments, watches and clocks
Division 34: Manufacture of motor vehicles, trailers and semi-trailers
Division 35: Manufacture of other transport equipment
Division 36: Manufacture of furniture; manufacturing n.e.c.
Division 37: Recycling

Section E: Electricity, gas and water supply

Division 40: Electricity, gas, steam and hot water supply
Division 41: Collection, purification and distribution of water

Section F: Construction

Division 45: Construction

Section G: Wholesale and retail trade; repair of motor vehicles, motorcycles and personal and household goods

Division 50: Sale, maintenance and repair of motor vehicles and motorcycles; retail sale of automotive fuel
Division 51: Wholesale trade and commission trade, except of motor vehicles and motorcycles
Division 52: Retail trade, except of motor vehicles and motorcycles; repair of personal and household goods

Section H: Hotels and restaurants

Division 55: Hotels and restaurants

Section I: Transport, storage and communications

Division 60: Land transport; transport via pipelines
Division 61: Water transport
Division 62: Air transport
Division 63: Supporting and auxiliary transport activities; activities of travel agencies
Division 64: Post and telecommunications

Section J: Financial intermediation

Division 65: Financial intermediation, except insurance and pension funding
Division 66: Insurance and pension funding, except compulsory social security
Division 67: Activities auxiliary to financial intermediation

Section K: Real estate, renting and business activities

Division 70: Real estate activities
Division 71: Renting of machinery and equipment without operator and of personal and household goods
Division 72: Computer and related activities
Division 73: Research and development
Division 74: Other business activities

Section L: Public administration and defence; compulsory social security

Division 75: Public administration and defence; compulsory social security

Section M: Education

Division 80: Education

Section N: Health and social work

Division 85: Health and social work

Division 90: Sewage and refuse disposal, sanitation and similar activities
Division 91: Activities of membership organizations n.e.c.
Division 92: Recreational, cultural and sporting activities
Division 93: Other service activities

Section P: Activities of private households as employers and undifferentiated production activities of private households

Division 95: Activities of private ho useholds as employers of domestic staff
Division 96: Undifferentiated goods-producing activities of private households for own use
Division 97: Undifferentiated service-producing activities of private households for own use

Section Q: Extraterritorial organizations and bodies

Division 99: Extraterritorial organizations and bodies

Chapter Three

Summary of Findings

3.0. Introduction

3.0.1 As stated earlier in Chapter One, an all-India survey on the situation of employment and unemployment and migration particulars in India was carried out during NSS 64th round (hereafter referred to as 2007-08). The collection of information on employment and unemployment particulars was as a part of the annual series of the National Sample Survey Organisation (NSSO) which was started in NSS 60th round (January to June 2004) and repeated in NSS 62nd round (July 2005-June 2006). In between NSS 60th and NSS 62nd round, the seventh quinquennial round of NSS was conducted in NSS 61st round (2004-05).

3.0.2 Though the overall sample size for NSS 64th round was comparable with that of NSS 61st round but was on the lower side in NSS 62nd round, the designs of these three rounds were different. NSS 61st and 64th rounds were oriented towards demographic design but the second stage stratum (SSS) formation in NSS 64th round was tuned to net more migrants/remittance recipient households since study of migration was one of the main focus of this round, whereas SSS formation in NSS 61st round was tailored for netting adequate representation from different stratum of the population to study the employment characteristics. Compared to these two rounds, NSS 62nd round design was enterprise based.

3.0.3 In this round, the scope of the survey on employment and unemployment was expanded with the collection of information on migration particulars of the households, of the household members and of the out-migrants. In this report, various facets of employment and unemployment characteristics have been presented. The detailed tables, related to employment and unemployment characteristics, obtained from the survey are presented in the Appendix A. This chapter discusses the salient findings of employment and unemployment characteristics.

3.0.4 The estimates are given for India and its constituent states and union territories. The discussions here are, however, centered on the all-India estimates. A comparison with the results from earlier surveys on employment and unemployment conducted by NSSO, is also given, whenever these are available.

3.0.5 The chapter is organized into five sections. To study the employment-unemployment situation, it is necessary to have a perspective of, the socio-economic structure of the households and the demographic pattern of the population of the country during the survey period. Therefore, information on socio-economic condition of sample households and demographic data pertaining to the surveyed individuals were also collected in this survey. In section one, the main findings relating the demographic and social characteristics of the households and population are presented. The second section highlights the estimates of employment indicators, classified by various correlates such as sex, age group, decile classes of monthly per capita expenditure, educational level, etc. This section also discusses the wages received by the employees, for work during the reference week. The discussion on unemployment rate for different age groups of the population, educational level of the persons, etc. appears in section three and that for the extent of underemployment in section four. The results relating to the employment and unemployment characteristics of the different social groups of the population are discussed in section five.

3.0.6 *Use of estimated aggregates*: The estimates, in this report, are generally presented as ratios. However, the estimates of aggregates are also given in the margin of the detailed tables in the appendix. It may be noted that estimates of ratios are generally expected to be robust and the estimates of aggregates may be used only to combine the ratios but not for generating

estimates of absolute numbers for a characteristic. To estimate an absolute number in any category, it is advisable to apply the survey estimates of ratios to the census population or projections[1]. It may also be noted that as the tables are generally presented as 'per 1000 distribution', the figures are rounded off. Thus, while using the ratios from the survey results, it is to be noted that the accuracy of these derived aggregates will be limited to the number of significant digits available in the ratio or percentage estimates presented in the report. The estimated aggregates, wherever possible, can be used to get ratios with more significant digits.

3.0.7 *Reference period of the estimates:* The estimates presented in the report, in general, refer to the mid-point of the survey period (July 2007 – June 2008) of NSS 64th round, i.e., 01.01.2008.

3.0.8 The estimates of some important indicators of employment and unemployment, as mentioned earlier, have been presented for all the States and U.Ts. While using the estimates for the smaller States, it may be kept in mind that the sample sizes for them may not be adequate enough for getting sufficiently reliable estimates.

3.1 Characteristics of Households and Population

3.1.1 Estimates of Households and Population

3.1.1.1 In Statement 1 estimates of number of households, total population, average household size and sex ratio (number of females per 1000 males) are presented. As per the survey estimates, during 2007-08, about 72 per cent of the households belonged to rural India and accounted for nearly 74 per cent of total population. The average household size and sex ratio were 4.5 and 947 respectively. Sex ratio in rural areas (954) was higher as compared to that in urban areas (928). Average household size in rural areas (4.7) was also higher as compared to that in urban areas (4.2).

Statement 1: Estimated number of households, number of persons, average household size and sex ratio during 2007-08
all-India

estimates	rural	urban	rural+urban
(1)	(2)	(3)	(4)
number of households (00)	1592676	632740	2225417
number of persons (00)	7435962	2656634	10092595
average household size (0.0)	4.7	4.2	4.5
sex ratio (females per 1000 males)	954	928	947

Ref: Table 2 in Appendix A

Statement 2: Average household size and sex ratio (females per 1000 males) over the different NSS surveys
all-India

NSS survey periods	rural		urban	
	average household size	sex-ratio	average household size	sex-ratio
(1)	(2)	(3)	(4)	(5)
2007-2008 (64th)	4.7	954	4.2	928
2005-2006 (62nd)	4.8	951	4.3	916
2004-2005(61st)	4.8	962	4.3	920
2004 (60th)*	5.0	959	4.4	913
1999-2000 (55th)	5.0	959	4.5	915
1993-94 (50th)	4.9	944	4.4	905
1987-88 (43rd)	5.1	948	4.7	912
1983 (38th)	5.1	963	4.7	905
1977-78 (32nd)	5.2	959	4.9	904

* *refers to the period January to June 2004.* Ref: Table 2 in Appendix A

3.1.1.2 *Change over the years:* Statement 2 presents the average household size and sex ratio obtained from the last six quinquennial rounds which were conducted during 1977-78 to 2004-05 and those obtained from NSS 60th and 62nd rounds. It is seen that the sex-ratio has experienced a decline in the rural area during 2007-08 as compared to 2004-05. The situation has improved slightly in the urban areas during this period, with the sex ratio estimated as 928 females per 1000 males during 2007-08

[1] In Appendix D, the Projected Population as on 1st March 2007 and 1st March 2008 supplied by RGI Office have been presented along with those projected for 1st January 2008 using compound rate of growth. The projections have been given for, male and female, separately, for rural and urban for each State/U.T.

compared to 920 females per 1000 males in 2004-05. However, when compared with the situation prevailing during 1977-78 and 2007-08, it is noticed that in the urban areas, the sex ratio has increased from 904 to 928 and for the rural area, it has been hovering around 955. It is also observed that the average household size has experienced generally a, modest, declining trend in both rural and urban areas during the period from 1977-78 to 2007-08. During 1977-78, the average household size in the rural areas was 5.2 which has declined to 4.7 in 2007-08 and during this period the average size in the urban areas also has reduced from 4.9 to 4.2. The average household size and sex ratio for the periods 1993-94, 1999-2000, 2004-05 and 2007-08 for rural+urban are additionally presented in Statement 2(a).

Statement 2 (a): Average household size and sex ratio (females per 1000 males) for NSS 64th, 61st, 55th and 50th rounds
all-India

	average household size	sex ratio	average household size	sex ratio	average household size	sex ratio
(1)	(2)	(3)	(4)	(5)	(5)	(6)
2007-2008 (64th)	4.7	954	4.2	928	4.5	947
2004-2005(61st)	4.8	962	4.3	920	4.7	951
1999-2000 (55th)	5.0	959	4.5	915	4.9	947
1993-94 (50th)	4.9	944	4.4	905	4.8	934

3.1.2 Household Type

3.1.2.1 The nature and type of work from which a household derived its major income is an important indicator of the activity pattern of its members. In the survey, every sample household was, therefore, categorized into *household types*, depending on the economic activity of the members of the household during the 365 days preceding the date of survey from which major income of the household was generated. The distribution of households and the corresponding population by *household type* for all-India for the periods 1993-94, 1999-2000, 2004-05 and 2007-08 are given in Statement 3. The distribution of households and persons by household types for each State/ U.T. are presented in Statement 3.1 and 3.2, respectively

3.1.2.2 Statement 3 reveals prominence of *self-employed* households in rural areas, accounting nearly 49 percent of total rural households during 2007-08. Members of these households constituted about 54 per cent of the rural population. Another 36 per cent of the rural population belonged to *rural labour* households and such households constituted about 38 per cent of all rural households. On the other hands, among urban households, *regular employment* was the mainstay of 41 per cent of households with 39 per cent of the urban population. Nearly 37 per cent of the urban households and 43 per cent of the urban population depended on *self-employment* as the major source of income.

3.1.2.3 *Change over the years:* The proportion of households, in the rural areas, depending on *self-employment* as the major source of income has declined slightly in 2007-08 to 49 per cent from 52 per cent observed during 2004-05. The decline of this share of households with *self-employment* as the major source of income was reflected with the increased proportion of both *rural labour* households and the households categorized as '*others'*. When compared with the time period between NSS 50th round (1993-94) and NSS 64th round (2007-08) it is found that the share of *rural labour* households hovered around 38 per cent of total households during this period, except in 1999-2000 when their share increased to 40 per cent and the share of *self-employed* households decreased slightly from 51 per cent in 1993-94 to 49 per cent during 2007-08. It is noticed that the share of the households categorized as '*others'* has registered an

increase of 2 percentage points during this period to reach 13 per cent. In the case of urban areas, during the period from 2004-05 and 2007-08, the share of *casual labour* households has increased slightly from 12 per cent to 13 per cent. However, the share of *regular wage/salaried* households remained static at 41 per cent during this period and the share of *self-employed* household decreased marginally from 38 per cent to 37 per cent. When compared with the share of different categories of urban households for the period 1993-94 and 2007-08, it is noticed that the share of *self-employed* households has increased 3 percentage points from 34 per cent to 37 per cent, the share of *regular wage/salaried* households decreased from 43 per cent to 41 per cent and the share of *casual labour* households remained same at 13 per cent.

Statement 3: Distribution of households (per 1000) and population by household type during 1993-94, 1999-00, 2004-05 and 2007-08

Ref: Table 19 R and 19U in Appendix A

3.1.3 Age Distribution of Population

3.1.3.1 Age and sex distribution of the population are two important demographic characteristics that enhance the understanding of labour force indicators. In Statement 4, the distribution of rural and urban population by 5-year age-groups is presented for males and females separately along with corresponding distribution obtained from the NSS 61st round (2004-05). The corresponding distributions for each State/U.T are presented in Statement 4.1.

3.1.3.2 The rural-urban differences in the age-distribution of population are clearly evident from Statement 4. About 35 per cent of males and 33 per cent of females in rural areas belonged to the age-group 0-14 years compared to nearly 28 per cent males and 27 per cent females in the urban areas. The working age population (15-59 years) comprised about 57 of males and 60 per cent of females in rural areas and about 67 per cent of males and 66 per cent of females in urban areas. The percentage of elderly women, that is, women of age 60 years and above, tends to be higher than that of the elderly men, particularly in urban areas. It is noticed that compared to 2004-05, during 2007-08, there has been a reduction in the share of the persons in the lower age groups, viz, for 0-14 years and a marginal increase in the share of the of the persons in the age groups 45 years and above.

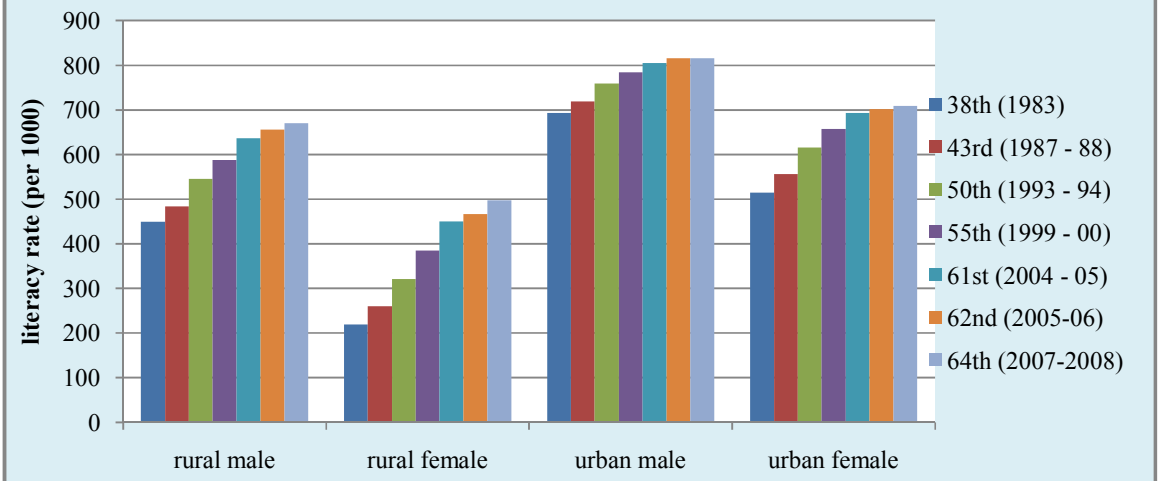
3.1.4 Educational Status of Population

3.1.4.1 *Literacy rate*: Literacy, together with educational attainment, determines the quality of population and is extremely relevant to study the aspects of labour force and its participation in economic activities. For the purposes of this survey, a person who could read and write a simple message in any language, with understanding, was considered a *literate*. *Literates* were further classified according to their levels of educational attainment. Thus, it is important to study the distribution of population by educational attainment (level) before a

comprehensive discussion is attempted on employment-unemployment in the subsequent sections of this chapter.

3.1.4.2 Literacy rate of all ages for both rural and urban areas for the period from 1983 (38th round) to 2007-08 (64th round) is summarized in Statement 5. Literacy among males and females (for all ages) has been gradually increasing over the years in both rural and urban areas. As compared to 1983 during 2007-08, the literacy rate in the rural areas has increased by 22 percentage points for males and 28 percentage points for females to reach of 67 per cent for males and 50 per cent for females. In urban areas also for both males and females, the literacy rate has increased. The increase was from 69 per cent to 82 per cent for males and from 52 per cent to 71 per cent for females in the corresponding period. The literacy rates for persons of all ages for 2007-08 are presented in Statement 5.1 for each State/U.T. A comparison of the literacy rates (for all ages) over the years are also presented in Figure 1.

Fig 1: Literacy rate (per 1000) in different NSS rounds



3.1.4.3 *Literacy rate for persons of age 7 years and above:* The information about the literacy status of the population is also collected in the Population Census conducted in the country decennially. The literacy rates in the Population census are presented for the population of age 7 years and above. Therefore, to facilitate the comparison with the figures of Population Census, Statement 6 presents the literacy rate for the persons of age 7 years and above for NSS 50th , 55th, 61st, 62nd and 64th rounds. The literacy rate among persons of age 7 years and above in 2007-08 was 71 per cent. This was nearly 4 percentage point higher compared to the literacy rate estimated in NSS 61st round (2004-05) and 14 percentage point higher compared to 1993-94. It is noticed that, though, for both rural and urban segments of the population, literacy rate had increased during 1993-94 and 2007-08, the increase was significant for rural areas (the literacy rate for the rural population increased by 15 percentage point, from 51 per cent in 1993-94 to 66 per cent in 2007-08) and for urban population the increase during this time interval was 7 percentage point from 77 per cent in 1993-94 to 84 per cent in 2007-08. The gender differential in the literacy rate is also perceptible. At the all-India level, for both rural and urban sectors combined, the literacy rate for male was nearly 80 per cent and for females it was nearly 61 per cent, indicating nearly 19 percentage point lower literacy for the female than the male. The literacy rate obtained from Population Census 2001 is also presented in this Statement. It may be seen that the literacy rates obtained from Census are comparable with those obtained from NSS surveys. The literacy rates for persons of age 7 years and above for each State/U.T. are presented in Statement 6.1.

Statement 6: Literacy rate (per 1000 persons) among persons of age 7 years and above during 1993-94, 1999-2000, 2004-05, 2005-06 and 2007-08

3.1.4.4 *Educational level:* The distribution of males and females of age 15 years and above by level of general education attained as estimated from the present survey on employment and unemployment is presented separately for rural and urban India in Statement 7 and the corresponding results for each State/ U.T. are presented in Statement 7.1. Figures presented in this Statement reveal that about 23 per cent of the population in India of age 15 years and above were having general education level of '*upto primary'* – 25 per cent in rural areas and 18 per cent in urban areas. The proportion of persons of age 15 years and above who had achieved general education level '*secondary and above'* (for discussion in this report, they will henceforth be referred to as *educated* persons) was nearly 18 per cent in rural areas compared to 46 per cent in urban areas. The proportion of *educated* persons is found to be highest among the urban males –about 52 per cent – followed by urban females (39 per cent) and rural males (24 per cent). It is observed that at the all-India level nearly 6 per cent of the population had achieved general educational level graduate and above. Considerable rural-urban and male-female differential in the category of higher level of general education (i.e., general educational level *graduate and above*) was observed. In the rural areas only 3 per cent of the persons of age 15 years and above had general educational level graduate and above while in the urban areas nearly 15 per cent of the population of age 15 years and above had achieved general educational level graduate and above. The gender differential in the level of

[2] In NSS 64th round the subject of *Participation and Expenditure in Education* was separately covered and in the corresponding Report no. 532 also, the estimates of literacy rate (based on independent sample of households), other broad indicators, such as proportion of persons in different levels of general education are arrived at. These estimates are very close.

higher education is also significant. In the rural areas, nearly 4 per cent of the males had achieved general educational level graduate and above and for females it was nearly 2 per cent. In the urban areas, nearly 18 per cent of the males had achieved general educational level of graduate and above. This was 12 per cent for the females.

3.1.4.5 *Level of technical education:* In this survey, the degree in professional courses like engineering, medicine, agriculture, etc., a diploma or certificates in agriculture, engineering/technology, medicine, crafts, etc., was included under technical education. The data collected according to the level of technical education successfully completed by the persons make a distinction between different levels of technical education such as technical degree of graduate level or postgraduate and above level. Similarly, for the diploma in technical education three types of levels were distinguished, viz., *below graduate* level, *graduate* level and *post graduate and above* level. The distribution of persons of age 15 years and above by level of attainment of technical education is given in Statement 8 at the all-India level. This Statement reveals that only 1 per cent of the persons of age group 15 years and above in the rural areas and 4 per cent in urban areas had some technical education. It is observed that in both the rural and urban areas, most of the persons having technical education were having diplomas/certificates of either below graduation level or graduation. In the rural areas almost all of those who had some technical education had attained the technical education through diploma/certificate (nearly 1 per cent) and in the urban areas nearly 3 per cent had attained technical education through diploma.

3.2 Labour Force and Employed Population

3.2.1 *Labour-force*: Labour-force, refers to the population which supplies or offers to supply labour for production and, therefore, includes both 'employed' and 'unemployed' persons/person days. Labour-force participation rate (LFPR) is defined as the proportion of persons/person days in the labour-force. Similarly, the proportion of persons/person-days employed to total is referred to as work-force participation rates (WFPR) or worker-population ratio (WPR). For measuring LFPR or WFPR, all the three approaches, viz. *usual status (us), current weekly status (cws)* and *current daily status (cds)*, were adopted for collection of data in the survey. The estimates of various ratios (LFPR, WPR, PU, UR) are per person in case of *us* and *cws* and per person-day for *cds*.

3.2.1.1 The survey has, therefore, generated three different estimates of LFPR and WPR based on the three approaches used in classification of the *activity statuses* of the person surveyed. These ratios are given in per 1000 of persons/person-days. These are:

i) number of persons in labour-force - i.e. employed or unemployed-- according to usual *principal status* (*ps*) and according to the *principal* and *subsidiary status* taken together (*ps & ss*),

ii) number of persons in labour-force – i.e. employed or unemployed -- on an average in a week of 7 days preceding the date of survey, and

iii) number of person-days in labour-force – i.e. employed or unemployed --per day on an average during the reference period of 7 days preceding the date of survey.

3.2.1.2 In this section, the estimate of the labour-force, particularly the work force (or employed) and their structure are discussed. In order to study the trend, earlier survey estimates, in some cases, have been also provided.

3.2.2 Labour-force Participation Rate (LFPR)

3.2.2.1 In Statement 9, estimates of WPR (number of persons/ person-days worked per 1000 persons/ person-days), PU (number of persons unemployed/ person-days unemployed per 1000 persons/ person-days) and LFPR (number of persons/ person-days in the labour force per 1000 persons /person-days) according to *usual principal activity status* (*ps*) , *usual status* (*ps+ss*), *current weekly status* (*cws*) and *current daily status* (*cds*) are presented. Per 1000 distribution of persons by broad usual *principal activity status*, *usual status* (*ps+ss*), *cws* and *cds* for each State/U.T. are presented in Statement 9.1, Statement 9.2, Statement 9.3 and Statement 9.4, respectively.

Statement 9: WPR, PU and LFPR (per 1000), according to *usual status* (*ps*), *usual status* (*ps+ss*), *current weekly status* (*cws*) and cu*rrent daily status* (*cds*) during 2007-08

Ref: Tables 6, 7, 8 and 9 in Appendix A

3.2.2.2 *Usual status approach*: In the *usual status* (*ps+ss*), at the all-India level, during 2007-08, the LFPR was 41 per cent. Considerable rural-urban and male-female differentials in the LFPR were observed. The LFPRs for persons in the rural areas was about 43 per cent, which is about 6 percentage points higher than that in the urban areas. The gender differentials in the estimates of LFPRs were quite significant. In the urban areas, nearly 58 per cent males were in the labour force compared to 15 per cent females. In the rural areas, the gender differential also existed, albeit narrower than the urban areas. Nearly 56 per cent rural males were in labour force compared to 29 per cent rural females.

3.2.2.3 *Current status approach*: The LFPR according to *current weekly status* (*cws*) and *current daily status* (*cds*) approaches was 39 per cent and 37 per cent, respectively. It is observed that compared to estimates of LFPRs based on the *current weekly* or *daily statuses*, the *usual status* (*ps+ss*) LFPRs were marginally higher in both the sectors. Among the four segments of the population , viz., rural male, rural female, urban male and urban female, the LFPR for rural females in the *current status* approach was much lower than those obtained for them in the *usual status* (*ps+ss*). This could be due to the fact that some of the usually employed, which has a long reference period of last 365 days, withdrew from labour force when there was no work during week/day rather than reporting themselves as unemployed. The difference is found to be greater for females in the rural areas where the seasonality in work is known to be predominant.

3.2.2.4 *Sex-ratio of labour force*: It may be noted that sex ratio (females per 1000 males) in India was 954 in the rural areas and 928 in the urban areas. A study of the sex ratio among persons in the labour force (i.e., number of females in the labour force per 1000 males in labour force) revealed the gender differentiation that existed between the males and females in the labour force participation. It is seen that according to *usual principal status*, obtained from Appendix A Table 6, females were far outnumbered by males in labour force, in both the rural and urban areas. Moreover, the labour force sex ratio in urban areas (204) was even worse than that obtained in the rural areas (381). However, when the *usual* (*ps+ss*) status approach is followed, females were found to be relatively more frequent in the labour force. This was more so in rural areas (499) than in urban areas (234) (Appendix Table 7), reflecting more frequent females' engagement in subsidiary economic activities in rural areas than in urban areas. In NSS 61st round (2004-05), the labour force sex ratio in the *usual* (*ps+ss*) status was 577 in the rural areas compared to 287 in the urban areas. This showed that in 2007-08, even lesser number of females per 1000 of males were in the labour force compared to the situation in 2004-05.

3.2.2.5 *Educational level specific LFPR* : In Statement 10 educational level specific LFPR has been presented for persons of age 15 years and above and the corresponding results for each State/U.T. has been presented in Statement 10.1 . It is observed, that generally the LFPR was the highest among those with educational level *'post graduate and above'* and lowest among those with educational level '*higher secondary'*. Among rural males, LFPR was the highest among those with educational level *'post graduate and above'* and among those with education '*literate & up to primary'* (92 per cent each). This feature was observed for rural females also, with LFPR was the highest among those '*post graduate and above'* (62 per cent). In rural areas, the lowest LFPR was observed among those with educational level '*higher secondary'*, 70 per cent for males and 22 per cent for females. In case of urban males, LFPR was the highest among those with educational level '*post graduate and above'* (88 per cent) and it was the lowest among those with educational level '*higher secondary'* (64 per cent). Among urban females, the LFPR was the highest for those with educational level '*post graduate and above'* (44 per cent) and LFPR was the lowest among those with educational level '*secondary'* (11 per cent), closely followed by those with educational level '*higher secondary'* (12 per cent).

Ref: Table 17 in Appendix A

3.2.3 Usually employed Population

3.2.3.1 Of the estimates obtained on the basis of three approaches, viz., *usual status* approach, *current weekly status* approach and *current daily status* approach, mentioned above, the *us* approach gives the magnitude of the '*usually employed'* or the '*usual status work-force'*. In Statement 9, estimates of LFPR, WPR and PU have been presented for two categories viz. (a) '*usually employed'* or '*working'* in the *principal status* (*ps workers*) and (b) '*usually employed"* or '*working'* in the *principal* and *subsidiary statuses* taken together (*ps+ss workers*). The *ps+ss* category constitutes the total *usually employed* (or '*all'* workers). The first category pertains to those with more or less stable employment and in the second category, besides those with stable employment, those employed in the subsidiary category only are also included.

3.2.3.2 It is seen from Statement 9 that during 2007-08, WPR according to the *usual status* (*ps+ss*) was about 40 per cent in India and WPR in the rural areas (42 per cent) higher than that in the urban areas (35 per cent). The male WPR in both the rural and urban areas were considerably higher than female WPR. In the rural areas the male WPR was 55 per cent compared to 29 per cent for the female WPR. In the urban areas, the male WPR was at the same level as in the rural areas (nearly 55 per cent) while the female WPR was considerably lower (nearly 14 per cent) compared to the rural counterparts. A further comparison of WPRs according to usual (ps) and usual (ps+ss) gives an idea about the dimension of *subsidiary status* workers among '*all'* workers i.e. workers according to *usual* (*ps+ss*). Difference of WPRs according to *usual* (*ps+ss*) and *usual* (*ps*) gives the dimension of workers who worked in the subsidiary capacity only. It is noteworthy that among male workers in the *usual status* approach (*ps+ss*) in the rural areas, about 1 per cent had worked solely in the *subsidiary* capacity and in the urban areas, among *usual status* male workers, those who had worked solely in *subsidiary* capacity was almost negligible (less than 1 per cent). The increase in the proportion of workers in the *usual status*, who had only *subsidiary* work, is noticeable for the females, for both the rural and urban areas. About 7 per cent of females, in the rural areas, had worked in the *subsidiary* capacity only and the proportion turned out to be 2 per cent for urban female workers.

3.2.4 Estimates of Employed According to Current Status

3.2.4.1 The *usual status* approach, having the long reference period of last 365 days, adopted for classification of the population is unable to capture changes in the activity pattern caused by seasonal fluctuations. But the estimates obtained by adopting the current weekly and *current daily status* approaches are expected to reflect the overall effect caused by intermittent changes in the activity pattern during the year. The latter reflects even the changes that take place during a week. The estimates of the *employed* based on *current weekly status* give the average weekly picture while those based on *current daily status* give the average daily picture of employment. The difference between the two rates indicates the *underemployment* of those who had some employment in the week. Statement 9 gives the relevant estimates of the *employed* according to *current weekly status* and *current daily status* for all-India based on the survey.

3.2.4.2 The WPR, at the all-India level, considering all persons, was 37 per cent according to *current weekly status* approach and it was slightly lower at 34 per cent according to *current daily status* approach. The difference between the WPRs according to *usual status* (*ps+ss*) and *current weekly status* approach is found to be 4 percentage point in the rural areas and the difference was almost negligible (less than 1 percentage point) in the urban areas. The difference between these two approaches was higher for female than for males, in both the rural and urban areas. For rural males, the WPR according to *usual status* (*ps+ss*) approach was 2 percentage point higher compared to 5 percentage point in case of females. In case of

urban areas, the extent of difference in the WPR between these two approaches was considerably lower for both males and females. For urban males, the WPR in the *usual status* approach (ps+ss) was at the same level as that in *current weekly status* approach, and for females, the WPR according to *usual status* approach (*ps+ss*) was nearly 1 percentage point higher than the corresponding WPR according to *current weekly status* approach. This shows the higher incidence of underemployment among the usually employed rural females. In the *current daily status* approach, the WPR for rural areas was 34 per cent, which was 4 percentage points lower than the rate obtained in the *current weekly status* approach. In the case of urban areas, the difference in the estimate of WPR obtained through these two approaches narrowed further – it was 33 per cent in the *current daily status* approach and 35 per cent in the *current weekly status* approach. It may be noted that WPR for rural females according to *usual* (*ps+ss*) was 29 per cent and that according to *current daily status* was 19 per cent showing a difference of nearly 10 percentage points.

3.2.5 Changes in WPR over NSS Rounds

3.2.5.1 Statement 11 presents the WPRs, according to all the approaches, obtained from the present survey as well as those from the previous surveys. A comparison in the WPR over different time points has been made here. However it may be noted that certain procedural changes were made in the classification of 'employed', 'unemployed' and 'persons out of labour force' in course of earlier rounds. Prior to NSS 50th round survey (1993-94), a trichotomous classification, based on major time criterion, was adopted in classifying the population into broad groups: 'employed', 'unemployed' and 'persons out of labour force'. According to trichotomous classification, persons were directly classified into any of the three categories viz. 'employed' or 'unemployed' or 'out of labour force' based on major time criterion. In the later rounds of surveys, a two-stage dichotomous classification was adopted. In the first stage, a person was considered either belonging to the 'labour force' or ' out of labour force' based on major time criterion and then, in second stage, 'persons in labour force' were classified into 'employed' and 'unemployed' again based on major time criterion. However, in both the approaches, count of 'employed', 'unemployed' and 'persons out of labour force' are expected to be broadly comparable according to *principal* and *subsidiary statuses* taken together.

3.2.5.2 The comparison of WPRs over a short period shows that, compared to year 2004-05 (the latest quinquinnial round), the WPRs, according to *principal* and *subsidiary statuses* taken together, during 2007-08 for males did not change in either rural or urban areas. However, for females there was a decline in the WPR according to *usual status* approach in both the rural and urban areas. The decline was nearly 4 percentage points in rural areas and 3 percentage points in urban areas during the same period. According to *current weekly status*, there was nearly 1 percentage point marginal increase in the WPR for males in urban areas with no change in rural areas. For females, the decline observed was of the order of 4 percentage points in rural and 2 percentage point in urban areas. In the *current daily status* approach, the WPR remained unchanged at 49 per cent between 2004-05 and 2007-08 for rural males. However for urban males the WPR increased to 53 per cent in 2007-08 from 52 per cent observed in 2004-05. During the corresponding period, the WPR for rural females decreased to 19 per cent from 22 per cent and for females in the urban areas, the decrease was 2 percentage points from 13 per cent during 2004-05 to 11 per cent in 2007-08. The behavior of WPRs over a long period since 1983 shows no uniform pattern of movement in any of the approaches, rather the movement during this long period has been irregular, with intermittent peaks and troughs. The change in the WPR (per 1000 persons) as per *usual status* (*ps+ss*) during the period 1983 to 2007-08 has been shown in the Figure 2.

Statement 11: WPR according to '*usual status*', '*current weekly status*' and '*current daily status*' approaches for different rounds

3.2.6 Age Specific Usual Status Worker Population Ratio (ASWPR)

3.2.6.1 The number of persons employed in a particular age-group per 1000 persons in that age-group is defined as the age specific worker population ratio (ASWPR). Based on the age of the persons, the ASWPRs are estimated from the 64th round data for broad age groups for the *principal status* (*ps*) workers, 'all' workers, *current weekly status* workers and *current daily status* workers. The relevant results, separately for rural and urban areas, are presented for all-India in Statement 12. The WPR according to *usual status (ps+ss)* for the age groups 15-29 years and 15 years and above for each state/U.T have been presented in Statement 12.1 and 12.2 respectively.

3.2.6.2 Statement 12 shows that for both males and females and in rural and urban areas, the ASWPR, in all the approaches, was the highest in the age group 30-59 years. According to *usual status* (ps+ss), the ASWPR for males in the age group 30-59 years was 98 per cent and 96 per cent in the rural and urban areas, respectively. The corresponding proportions for females in the age group 30-59 years were 54 per cent and 24 per cent in the rural and urban areas, respectively. It is important to note that the incidence of child workers, is still significant, particularly in the rural areas. According to *usual status* (*ps+ss*), about 3 per cent of male and 2 per cent of female children of age 5-14 years in the rural areas and 2 per cent of male and 1 per cent of female children in the urban areas were found to be engaged in some economic activities. For the age group, 15-59 years the WPR according to *usual status* (*ps+ss*) was 86 and 45 per cent for rural males and females, respectively and the WPR in the urban areas for this age group was 80 per cent and 20 per cent for males and females, respectively. The WPR for the aged (i.e., for persons of age 60 years and above) shows distinct pattern for rural and urban areas for both males and females. In the rural areas, a considerably higher proportion of the aged remain in the workforce (nearly 66 per cent for males and, 23 per cent for females). However, in the case of urban areas the proportion of workers in the age groups 60 years and above dipped significantly (39 per cent for males and 7 per cent for females). The ASWPR for different age groups according to *usual status* (*ps+ss*) is shown in the Figure 3.

Statement 12: WPR (per 1000) for different broad age-groups according to '*usual status*', '*current weekly status*' and '*current daily status*' approaches during 2007-08

3.2.6.3 In Statement 12, the WPR for different age groups as obtained from NSS 64th round has been presented. The age group 5-14 constitutes an important segment of the population. Their participation in work activities is identified as detrimental to their development. Thus, study of the trend in WPR for children of age 5-14 over a period of time is important. In Statement 12(a), worker population ratio for children of age 5-14 years have been presented according to *current weekly status* approach for the period 1993-94, 1999-2000, 2004-05 and 2007-08. WPR for children of age 5-14 years had shown a declining trend during the period from 1993-94 and 2007-08. The reduction in WPR for both male and female children in rural areas was from 6 per cent in 1993-94 to 2 per cent in 2007-08. In the urban areas, the reduction in WPR for male children was from 4 per cent in 1993-94 to 2 per cent in 2007-08 and for female children from 3 per cent to 1 per cent.

Statement 12(a): WPR among children of age 5-14 years as per CWS during 1993-94, 1999-2000, 2004-05 and 2007-08 all-India

category of children (age: 5-14 years)	NSS rounds			
	50th round (1993-94)	55th round (1999-2000)	61st round (2004-05)	64th round (2007-08)

3.2.7 Education Level Specific Usual Status WPR

3.2.7.1 The number of persons who are usually employed in a particular education category per 1000 persons in that education category is defined as the education level specific worker population ratio. Such ratios have been worked out for persons of age 15 years and above and for the youth, i.e., for persons of age 15-29 years. For working out such education specific worker population ratios, persons are classified into 8 categories viz., '*not literate'*, '*literate and up to primary'*, '*middle'*, '*secondary'*, '*higher secondary'*, '*diploma/certificate'*, '*graduate*' and "*post graduate and above'*. The relevant worker population ratios for rural and urban India according to *usual status* (*ps+ss*) are shown in Statement 13. The education level specific WPR for persons of age 15 years and above for each state/U.T. are presented in Statement 13.1.

3.2.7.2 For persons in the age group 15 years and above in rural and urban areas combined, the WPR was found to be highest for educational level '*postgraduate and above'* (nearly 70 per cent) followed by '*diploma/certificate'* (66 per cent). This was closely followed by those with educational level '*literate & upto primary'* (65 per cent). For the '*graduate'* WPR at all-India level was 60 per cent. There were substantial gender differentials in WPR for different levels of education in both rural and urban areas. In rural areas, nearly 72 per cent of the males of ages 15 years and above with education level of '*secondary and above'* were employed while only 25 per cent for females of ages 15 years and above were employed in the same educational category. In the urban areas, 71 per cent males and 16 per cent females with educational level '*secondary and above'* were employed in the same age group. Significant gender differential in WPRs existed even for those with higher level of general education, such as '*graduate'* or '*post graduate and above',* in both the rural and urban areas. In rural areas, among males with educational level *graduate*, 82 per cent were employed and this was 29 per cent for females. In urban areas, WPR for this level of general education was 79 per cent and 24 per cent respectively.

3.2.7.3 The WPRs according to *usual status* approach at the all-India level, among the persons of age 15-29 years was 68 for males and 28 per cent for females. Among rural males, WPR for the age group 15-29 years was found to be highest (92 per cent) for those who are *not literate* followed by those with general educational level *literate and upto primary* (86 per cent). Among urban males also WPR was highest among those with general educational level *not literate* (88 per cent) followed by those with general educational level *literate and upto primary* (84 per cent). For rural females, WPR was highest for the *not literates* (45 per cent). However for urban females, among those with education level *diploma/certificate*, the WPR was highest (35 per cent). Among the persons of this age group with general educational level *secondary and above*, WPR was found to be 54 per cent for males and 19 per cent for females in rural areas and in urban areas WPRs, for this level of general education level, were found to 49 per cent for males and 13 per cent for females.

Statement 13: Education-level specific *usual status* (*ps*+*ss*) worker population ratio (WPR) for persons of age groups *15-29* , *15* + and *all ages* during 2007-08

Ref: Table 17 in Appendix A

3.2.7.4 In Statement 13(a), the distribution of usual status workers by level of general education has been presented. A dominant chunk of the rural workforce was *not literate* (41 per cent), while it was nearly 17 per cent for urban workforce. In both rural and urban areas, the share of *not literate* in female workforce was higher compared to male workforce: only 13 per cent of male workers in urban areas were *not literate* compared to 34 per cent for female and 30 per cent of male workers in rural areas were *not literate* compared to 62 per cent for female. The share of persons with education level *secondary and above* in rural workforce was nearly one-third of that of urban areas (16 per cent in rural areas compared to 45 per cent in urban areas). In workforce, it is observed that, a higher share of males had higher level of education compared to their female counterparts. Thus, while only 7 per cent of rural female workforce had education *secondary and above* it was nearly 20 for males, and in the urban areas, while it was 34 per cent of female work force, for male it was 48 per cent. This feature was observed for those with educational attainment *graduate* and *post graduate and above* also. In the urban areas, nearly 14 per cent of male workforce were *graduate* compared to only 12 per cent in female workforce whereas in the rural areas nearly 1 per cent of the female workforce were *graduate* compared to 3 per cent in the male workforce. In urban areas, a significant share in the workforce had education level *post graduate and above* compared to almost negligible share in the rural areas. Nearly 5 per cent of the male workforce had education *post graduate and above* in the urban areas compared nearly 1 per cent in the rural areas. One distinct feature of the female workforce in the urban areas was that nearly 6 per cent of them were *post graduate and above* compared to 5 per cent in the male workforce.

3.2.8 Distribution of Usually Employed by Status of Employment

3.2.8.1 As stated earlier in Chapter Two, employed persons are categorized into three broad activity groups according to their status of employment. These broad groups are: (i) *self-employed*, (ii) *regular wage/salaried employees* and (iii) *casual labour*. Statements 14 presents per 1000 distribution of usually employed by these broad activity groups for both *principal status* (*ps*) workers and '*all'* workers. The statement also gives the results on the corresponding distribution obtained from the earlier surveys. The discussion below, however, pertains to 'all'(ps+ss) workers.

3.2.8.2 Among the three broad statuses of employment of the worker, *self-employment* status was dominant for both males and females in both rural and urban area, though for urban males the share of the *self-employment* was only marginally higher (only 1 percentage point) than *regular wage/salaried* workers. During 2007-08, in rural India, more than half of the *usually employed* ('all' workers) were *self-employed* – 55 per cent among males and nearly 58 per cent among females. In the urban areas, though the share of the *self-employed* was considerably less compared to rural areas, majority of the workers were still engaged in *self-employment* status: 43 per cent male workers and 42 per cent female workers were self-employed. One distinguishing feature of the share of different statuses of employment in urban areas vis-à-vis the situation in rural areas, is the comparatively higher share of *regular wage/salaried* persons and a consequent reduction in the share of *casual labours*. The proportion of *regular wage/salaried* persons in rural areas was 9 per cent for males and 4 per cent for females, whereas in urban areas, these figures were 42 per cent and 38 per cent respectively. The share of the *casual labours* in total workforce was 36 per cent and 38 per cent for rural males and rural females, respectively. These figures stood at 15 per cent and 20 per cent in urban areas, respectively. It is seen that the share of *regular wage/ salaried* persons in total employed are significantly lower for females than the corresponding share for males, in both rural as well as in urban areas.

3.2.8.3 *Change over rounds*: Among rural males, the proportion of *self-employed* had fallen from 61 per cent in 1983 to 55 per cent in 2007-08 and the fall in the share of *self-employed* category for female was to 58 per cent in 2007-08 from 62 per cent observed in 1983. It may be noted that these reductions has not been uniform throughout this period, but the movement was found to be irregular in different survey periods. These reductions in share of the *self-employed*, in the rural areas had been accompanied by a corresponding increase in the proportion of *casual labour* over this period – from 29 per cent in 1983 to 36 per cent in 2007-08 for males and from 35 per cent to 38 per cent in females. The urban areas show distinct pattern with the increase in the share of *self-employed* to 43 per cent from 41 per cent for males and a fall in the share of the *self-employed* for the females from 46 per cent to 42 per cent during the period from 1983 to 2007-08. It is also interesting to note that the increase in the share of *self-employed* in the total male workforce in the urban areas has been accompanied by a corresponding reduction in the share of *regular wage/salaried* persons (from 44 per cent in 1983 to 42 per cent in 2007-08), while the share of *casual labours* in the male workforce remained static at 15 per cent. For the females, the share of both the *self-employed* category and *casual labour* has reduced with a corresponding increase in the share of *regular wage/salaried* persons. In Statement 14(a), distribution of usually employed (ps+ss) persons by status of employment has been additionally presented for rural+urban for male+females for NSS 50th, 55th, 61st and 64th rounds. During this period, the share of *self-employed* in total workforce has decreased from 55 per cent in 1993-94 to 53 per cent in 2007-08. The share of *regular wage/salaried* persons has increased from 13 per cent to 15 per cent, while the share of *casual labours* has remained static at 32 per cent.

3.2.9 Industrial Distribution of Usually Employed

3.2.9.1 As in the earlier employment and unemployment surveys, in 64th round survey also, information relating to the sector (industry) of employment in which a person was working has been collected for the persons categorised as *employed*. In case of *usually employed*, this information was collected for both the *principal status* (*ps*) as well as *subsidiary status* (*ss*) workers. Statement 15 shows the distribution of the *usually employed* by industry, separately for usual '*principal status'* (*ps*) workers and for '*all'* workers. The corresponding results, for broad industry divisions, for each State/U.T. are shown in Statement 15.1. In the present survey, industry classification followed was NIC 2004. Similar results based on the earlier quinquennial surveys are also presented in the Statement. It may be mentioned that NIC 1998 was used for NSS 55th, NSS 60th, and NSS 61st round survey. Earlier to that, NIC 1970 was used in some rounds and NIC 1987 in some others. For example, in NSS 50th round NIC 1987 was used while in NSS 43rd and 38th rounds NIC 1970 was used. *It may be noted that the changes in the activity classification across revision of NIC classification at broad industry groups, are nominal and do not affect comparison of changes in the workforce in different industry groups over different rounds.*

3.2.9.2 *Rural areas*: Statement 15 shows that, during 2007-08, in rural India, among 'all' *usually employed*, about 67 per cent of males and 84 per cent of females were engaged in agriculture sector. Compared to this, the proportion of males engaged in agriculture sector was 81 per cent in 1977-78, 78 per cent in 1983, 75 per cent in 1987-88 (NSS 43rd round), 74 per cent in 1993-94 (NSS 50th round), 71 per cent in 1999-2000 (NSS 55th round) and 67 per cent in 61st round (2004-05). At corresponding points of time, proportions of female workers engaged in agricultural sector were 88 per cent, 88 per cent, 85 per cent, 86 per cent, 85 per

cent and 83 per cent, respectively. This shows a modest declining trend in the share of employment in the agricultural sector for both males and females. Over these years, in rural India, there has been a corresponding gradual increase in the proportion of males engaged in 'manufacturing', 'construction', 'trade, hotel & restaurant', 'transport, storage and communications'.

3.2.9.3 *Urban areas*: In urban India, the 'trade, hotel and restaurant' sector engaged about 28 per cent of the male workers, while 'manufacturing' and 'other services' accounted for nearly, 24 per cent and 21 per cent of the male workers. 'Transport, storage and communication' 'construction' and 'agriculture' provided employment to about 11 per cent, 10 per cent and 6 per cent of the male workers, respectively. On the other hand for urban females, 'other services' sector accounted for the highest proportion (38 per cent), followed by manufacturing (28 per cent) and agriculture (15 per cent). Since 1977-78, the proportion of urban females employed in agriculture fell by nearly 17 percentage points (from 32 per cent in 1977-78 to 15 per cent in 2007-08). During this time period, the proportion of urban males engaged in 'manufacturing' decreased from 28 per cent to 24 per cent and for 'other services', the share of urban male employment decreased from 24 per cent to 21 per cent. On the other hand, the proportion of urban males engaged in 'construction' increased from 4 per cent in 1977-78 to 10 per cent in 2007-08 and the increase for 'trade, hotel & restaurant' during this time period was from 22 per cent to 28 per cent.

3.2.10 Extent of Participation in Subsidiary Economic Activities

3.2.10.1 In the preceding sub-sections, all discussions on employment pertained to those who were economically active as per their *principal* or *subsidiary usual activity status*. In Statement 16, the proportion of persons who reported to have pursued some economic activity in the *subsidiary* capacity is given for each category of persons belonging to broad *principal activity status*. This provides the proportion of *principal status* workers with *subsidiary* work and of those who did not work according to the *principal status* but worked in *subsidiary* capacity only.

Statement 16: Proportion (per 1000) of persons (of all ages) reported *subsidiary* economic activity in different broad *usual principal activity status* during 2007-08

all-India

Ref: Table 16 in Appendix A

3.2.10.2 It is seen from Statement 16 that the proportion of persons engaged in subsidiary economic activity was higher in rural areas than in urban areas. At all-India level, about 11 per cent of persons were engaged in subsidiary economic activity. The proportion of persons engaged in subsidiary economic activity was nearly 14 per cent in rural areas and 2 per cent in urban areas. Though considerable rural-urban differences existed in participation in subsidiary economic activities, the proportions were quite similar in respect of males and females. In the rural areas nearly 14 per cent males and 13 per cent females were engaged in subsidiary economic activities and in urban areas the engagement in subsidiary economic activities for male and female were 2 and 3 per cent respectively. Interestingly, in rural areas, higher proportion of workers in the *principal status* were engaged in subsidiary economic activities (25 per cent of male worker and 24 per cent of female workers were engaged in subsidiary economic activities) compared to other category of persons viz. *unemployed* or persons *not in labour force.* Compared to this, in urban areas, a higher proportion of the persons categorized as unemployed in the *usual principal status* had engaged in subsidiary economic activities. Nearly 6 per cent of unemployed males and 8 per cent of unemployed females were engaged in subsidiary economic activities. It is noticed that compared to the male counterparts, a higher proportion of females (in both rural and urban areas, who were classified as either *not in labour force* or *unemployed* in the *usual principal status*), were engaged in the subsidiary economic activity capacity. The proportion of persons engaged in subsidiary economic activity for each state/U.T is presented in Statement 16.1.

3.2.11 Distribution of Usually Employed by MPCE Decile Class

3.2.11.1 Economic activities pursued by the household members have bearings on the household income and in turn, on the household monthly per capita expenditure – a close proxy for household income. However, in the absence of household income data due to inherent constrains in its collection in NSS surveys, the profile of household consumer expenditure is a meaningful indicator for level of living. In the present survey on employment and unemployment, data on household consumer expenditure was collected through a separate

worksheet, to facilitate the ordering of households, and there persons thereof, in respective level of living for deeper synthesis of survey results. This helps in portraying the survey variables in the hierarchy of levels of living classified as percentile classes of MPCE. As mentioned in Chapter Two, for all-India, 10 decile classes of MPCE have been formed, separately for rural and urban areas, and for each State/U.T., 5 quintile classes of MPCE have been formed, separately for rural and urban areas. The magnitude of worker population ratio (WPR), according to *usual status* (*ps+ss*) has been studied here for each MPCE decile class for the all-India level, separately for the rural and urban areas. Statement 17 gives the WPR for different MPCE decile classes at the all-India level. The State/U.T level WPRs are presented for each MPCE quintile class in Statement 17.1. The gradual increase in the WPR for rural males from the lower decile class to the upper decile classes are evident from the Statement. The WPR for the rural males was the lowest (47 per cent) in the bottom decile class, which gradually increased to reach the peak of 60 per cent in the top decile class. For the urban males also the pattern is broadly similar as observed for the rural male, with the only exception being observed in the 9th and 10th decile class, where the WPR has dropped marginally from the WPR observed for the 8th decile class. The pattern for rural females also broadly correspond to that of the males, i.e., gradual increase in WPR from the lower to the upper decile classes, with some marginal decrease in some of the decile classes. However, for urban females, the movement of WPR over different decile classes had distinct pattern. The urban female WPR hovered around 15-16 per cent in the bottom two decile classes, thereafter gradual decrease in the WPR was observed and the WPR dropped to reach its nadir at 11 per cent for the 7th decile class and again started increasing to reach 12 per cent in the 8th decile class and attained its peak of 17 per cent in the top decile class. WPR for different MPCE decile classes have been presented in Figure 4.

Ref: Table 18 in Appendix A

3.2.12.1 To study the relation between status of employment (viz., *self-employed*, reg*ular wage/salaried* persons and *casual labours*) and MPCE, in Statement 18 the distribution of *usually employed* (*ps+ss*) persons by status of employment for each MPCE decile class is presented. It may be seen from this Statement that among the rural male workers, share of *regular wage/salaried* persons and for the *self-employed* has generally increased with the increase in MPCE and there had been a corresponding decrease in the share of the *casual labourers* with the increase in MPCE. It may be noted that the share of the *self-employed* and *regular wage/salaried* persons in total rural male employment, in the bottom decile class, was 40 per cent and 4 per cent respectively, which increased to 63 per cent and 23 per cent in the top decile class. Compared to this, the share of *casual labourers* was the highest (56 per cent) in the bottom decile class which had decreased to 14 per cent in the top decile class. In the case of rural females also, the shares of the three statuses in employment over different decile classes, broadly resemble the pattern observed in the case of rural male workers. The share of the *self-employed* among total rural female workers increased to 74 per cent in the top decile class from the 42 per cent observed for the bottom decile class and the corresponding share for the *regular wage/ salaried* persons increased from a meager 2 per cent in the bottom decile class to reach its peak of 13 per cent in the top decile class. The share of the *casual labourers* among the total female workers showed gradual decreasing trend as one moves from the lower decile classes to the higher ones, with the share of *casual labourers* decreased to 14 per cent in the top decile class from 57 per cent observed in the bottom decile class. In the case of urban areas, the share of *self-employed* as well as the *casual labours* in total employed decreased

with the increase in MPCE and the remarkable increase in the share of the *regular wage/salaried* persons was observed with the increase in MPCE, in case of both males and females. For urban males, the share of *regular wage/salaried* persons increased from 21 per cent of the total employed in the bottom decile class to reach 59 per cent in the top decile class, whereas the shares of the *casual labourers* decreased from 37 per cent in the bottom decile class to almost negligible level of 2 per cent in the top decile class. The share of the *self-employed* has broadly shown decreasing trend with the increase in MPCE. In case of urban females gradual fading out of the *casual labourers* in the share of total female workers with the increase in MPCE is noticeable: it decreased from 36 per cent in bottom decile class to slightly less than 1 per cent in the top decile class. The share of *self-employed* has also gradually decreased from the lower decile classes to upper decile classes and the share of the *regular wage/salaried* persons increased significantly in upper decile classes. The share of the *self-employed* in total female workers which was 47 per cent in the bottom decile class, decreased to 25 per cent in the top decile class and the share of the regular *wage/salaried* persons increased to as high as 74 per cent in the top decile class from a meager 18 per cent in the bottom decile class.

3.2.13 Daily Wage Rates of Regular wage/salaried Employees and Casual Labourers

3.2.13.1 Data on the average daily wage earnings received by *casual labourers and regular wage/salaried* employees during each of the seven days of the reference week were collected in this survey. It may be noted that *regular wage/salaried* earners, generally, receive bonus and perquisites such as free accommodation, reimbursement of expenditure for medical treatment, free telephones, etc. and those are evaluated at the cost to the employer or at retail prices and duly apportioned for the reference week and also included in their earnings. In contrast, *casual labourers* are not entitled to the additional benefits besides the wage/salary that are enjoyed by the *regular wage/salaried* workers. It may be noted that in the age group 15-59 years, nearly 9 per cent of the person-days for rural male, 2 per cent of the person-days for rural females, 35 per cent of the person-days for urban males and 8 per cent of the person-days for urban females were in *regular wage/salary* employment (Appendix Table 9).

3.2.13.2 *Average wages for regular wage/salaried employees:* Statement 19 gives the average wage rates (Rs.) for *regular wage/salaried* employees in the age group 15-59 years for different levels of general education. The corresponding rates for each State/U.T, along with the sample person-days are summarized in Statement 19.1. Data indicate sharp disparities between the wage rates for the *regular wage/salaried* persons in the rural and urban areas. In the urban areas, the average wage/salary was Rs. 265.18 and for the rural areas it was Rs. 162.94. The extent of gender differential in the average wages in both the rural and urban sectors is also evident. In the rural areas, average wage/salary earnings per day received by male *regular wage/salaried* employees for was Rs. 175.30 and for females it was Rs. 108.14, indicating the female-male wage ratio as 0.62. In the urban areas, also, considerable wage disparity existed between male wage rate and female wage rate. In urban areas, male wage rate was Rs. 276.04 against the female wage rate of Rs. 212.86, indicating that the female-male wage ratio was slightly rationalized compared to the rural areas, with the female-male wage ratio as 0.77. It may be seen that educational attainment of the employees has positive impact on the wages earned by them, with the wage rates gradually increasing with the increase of the educational attainment. Thus, while in the rural areas a male employee with educational level *graduate and above* earned on an average Rs. 298.21 per day, the figure was a meager Rs. 90.97 for *not literates*, and Rs. 190.82 for those with educational level *secondary and higher secondary*. It may be noted that urban male employees with educational level *graduate and above* earned highest wage rates among all category of employees (Rs. 510.89). which was followed by the urban female employees with the education *graduate and above* (Rs. 380.97). The differentiations in wage rates are presented diagrammatically in Figure 5.

Statement 19: Average wage/ salary earnings (Rs. 0.00) per day received by regular wage/ salaried employees (activity status codes: 31, 71, 72) of age 15-59 years for different broad general education level during 2007-08

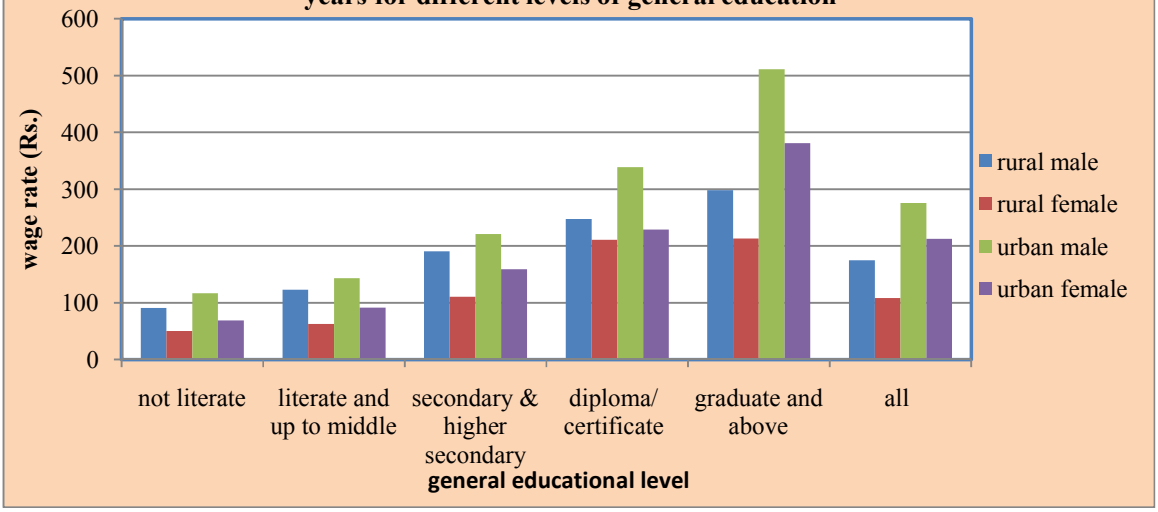
Ref: Table 20 in Appendix A

Figure 5. : Wage rate (Rs.) for regular wage/salaried workers of age 15-59 years for different levels of general education



3.2.13.3 *Categories of public works:* In NSS 64th round, in the *current status* (*current daily status* and *current weekly status*), separate activity status (*code*) was assigned to *casual labours in Mahatma Gandhi NREG (MGNREG) public works* and *casual labours in public works other than MGNREG public works.* This split of the category *casual labour in public works* into two separate categories was necessitated with the emergence of Mahatma Gandhi National Rural Employment Guarantee Act (MGNREGA), which envisages to provide at least 100 days of wage employment in every financial year to every household whose adult members volunteer to do unskilled manual work. In the Act, adult means a person who has completed his/ her 18 years of age. Though MGNREGA is applicable only for the rural areas and as per the Act only the adult persons are entitled to participate in work, the collection of information in the *current weekly status* and in the *currently daily activity status* corresponding to the activity status *casual labours in MGNREG public works* in NSS 64th round was not restricted to rural areas alone but information was also collected for urban areas and for all

persons irrespective of the age of the sample person. It may be noted that the Act was initially notified in 200 districts in the first phase with effect from February 2nd 2006 and then extended to additional 130 districts in the financial year 2007-2008 (113 districts were notified with effect from April 1st 2007, and 17 districts in UP were notified with effect from May 15th 2007). The remaining districts have been notified under the MGNREGA with effect from April, 2008. The survey period for the NSS 64th round being July 2007-June 2008, it was expected that considerable number of sample person-days *in MGNREG works* and *other type of public works* will be netted in the survey giving reliable estimates of the wage rates. However, it is apprehended that in a general household survey, with the design not particularly tuned to capture and identify persons, separately, as *casual wage labourers in MGNREG public works* or *other type of public works*, it may be difficult to differentiate these two distinct categories. Before, an analysis of the wage rates for different categories of casual labourers are undertaken, a comparison of the percentage of person-days in public works during NSS 64th with person-days in public works during NSS 61st round (2004-05) has been made.

Statement 20: Percentage share of person-days in casual labour in public works in total person-days considering all economic activities during 2004-05 and 2007-08

all-India

	64th round		61st round		percentage share of public works *	
	estimated person- days (00) in[3]:					
category of persons	in casual labour in public works	all economic activities	in casual labour in public works	all economic activities	64th	61st
(1)	(2)	(3)	(4)	(5)	(6)	(7)
rural male	111565	13060166	26674	12618564	0.85	0.21
rural female	68603	4756026	15615	5373804	1.44	0.29
rural person	180168	17816192	42289	17992368	1.01	0.24

*Note: *: Percentage share of casual labour in public works in total person-days considering all economic activities* Ref: Table 9 in Appendix A

3.2.13.4 *Person-days in different categories of public works:* In Statement 20, percentage share of person-days in *casual labour in public works* in total person-days considering all economic activities during 2004-05 and 2007-08 have been presented for rural areas. It is seen that percentage share has increased significantly (the increase has been from 0.24 per cent in 2004-05 to 1.01 per cent in 2007-08) and more among the females than the males. For the females, percentage share has increased from 0.29 per cent in 2004-05 to 1.44 per cent in 2007-08, whereas for males this increase was from 0.21 per cent in 2004-05 to 0.85 per cent in 2007-08. In the rural areas, share of person-days in *MGNREG public works* and *other public works* in total *casual labour* person-days for male and female combined was 3.2 per cent (Ref: Appendix Table 9).

3.2.13.5 *Average wages for casual labourers:* Statement 21 presents wage rates (Rs.) per day, at the all-India level, for different category of *casual labourers* of age 15-59 years, viz., *casual labourers in public works other than MGNREG public works*, *casual labourers in MGNREG public works* and *casual labours in other type of works*. Wage rates have been presented for NSS 50th, 55th, 61st and 64th rounds along with CIP (AL) and CPI (UNME) corresponding to these time periods. Since *casual labours in public works* (MGNREG public works and other types of public works) is relevant for rural areas, the wage rates have been presented for rural areas only. However, the wages rates for *casual labours other than public works* have been

[3] The absolute numbers of estimated person-days in Statement 20 correspond to the domain of 7 days (one week) per person of the population. Thus for a population of size N, in CDS/CWS approach, domain becomes 7 X N person-days/N person weeks. In CDS, it is the account of 7 days of the average week. Thus, Statement 20 gives estimates of 1.8 crore person-days, corresponding to average week, for rural areas in *casual labour in public works*. An approximation of total person-days in *public works* would be derived by (1.8*365)/7 = 93.86 crore person-days in the year.

presented separately for rural and urban areas. In Statement 21.1, wage rates for all types of *casual labourers* are presented for each State/U.T. along with the corresponding sample person-days. At the all-India level, the wage rate for *casual labour in public works* (for MGNREG public works as well as public works other than MGNREG public works) was significantly higher than that for the *casual labours in other than public works*. In the rural areas, the wage rate for *casual labour in public works other than MGNREG public works* was Rs. 74.45 and for *MGNREG public works* was Rs. 78.91. On the other hand, the wage rates for *casual labours in other than public works* was Rs. 60.33 in the rural areas and Rs. 72.24 in urban areas. No male-female disparity in the wage rates for *casual labours in MGNREG public works* existed and the disparity was almost negligible in case of *casual labour in other than MGNREG public works*. However, considerable male-female and rural-urban disparities in wage rate existed among the *casual labours in other type of works.* In the rural areas, average male wage rate for *casual labour other than MGNREG public works* was Rs. 76.02 and it was Rs. 70.66 for females. On the other than for casual labour in *MGNREG* public works, the wage rate was nearly Rs. 79.00 for both male and female. In the rural sector, on an average, Rs. 66.59 was earned in a day by a male engaged in *casual labours other than public works*, whereas a female casual labourer earned Rs. 48.41 a day – showing a difference of about Rs. 18. In the urban sector, the wage difference between males and females was even sharper. The difference was of the order of Rs. 35. In fact in the urban areas, a male *casual labourer engaged in works other than public works* earned Rs. 86.58 in a day and a female, Rs. 51.34 in a day. Another noticeable phenomenon of gender parity in wage rates in public work was evident during 2007-08. Female casual work wage rate in MGNREGA public work was 54 per cent higher than urban wage rate for *casual work other than public works in*

Statement 21: Average daily wages for casual labourers of age 15-59 years during 2007-08, 2004-05, 1999-2000 and 1993-94 along with CPIAL and CPIUNM for those periods

Ref: Table 21 in Appendix A

urban areas. It may be seen that compared to 2004-05, in 2007-08, the differences in wage rates in rural areas for males and females engaged as *casual labour in public works* has reduced. During the period from 2004-05, in 2007-08,, for those engaged as c*asual labour in other type of works* in the rural areas, the differences in wage rates for males and females have reduced slightly whereas for urban areas, the differences in the wages rates between males and females have increased.

3.3 Unemployment

3.3.1 *Unemployment:* As in the case of employed, for unemployed also, three kinds of estimates are obtained following the three different approaches used in classification of the activity statuses of the person. These are:

i) number of persons usually unemployed based on '*usual status'* approach,

ii) number of persons unemployed on an average in a week, based on the *current 'weekly status'*(cws) approach, and

iii) number of person-days unemployed on an average, on a day during the reference period of seven days preceding the date of survey, based on the *current 'daily status'*(*cds*) approach.

3.3.1.1 Of these three, the first estimate indicates the numerical magnitude of the persons unemployed for a relatively long period during a reference period of 365 days, i.e., in usual *principal status* (*ps*) and approximates an indicator of chronically unemployed. However, some of the unemployed on the basis of this criterion might be working in a subsidiary capacity. One can, therefore, get alternative estimate of the unemployed excluding those employed in a subsidiary capacity during the reference period. The former is called the usually unemployed according to the *principal status* (*ps*) and the latter, the usually unemployed excluding those employed in *subsidiary status* or usual status adjusted i.e., *us* (*adjusted*), which would conceptually be lower than the former.

3.3.1.2 The second estimate is based on the *current weekly status* and gives the average weekly picture during the survey year. It includes both chronic unemployment and also seasonal unemployment of those categorised as usually employed caused by seasonal fluctuations in economic activity.

3.3.1.3 The third estimate based on the *current daily status* concept considers person-days and gives average level of unemployment on a day during the survey year. It captures three aspects of *unemployment*, viz.:

(a) the unemployed days of the chronically unemployed,

(b) the unemployed days of the usually employed who become seasonally unemployed during the reference week by priority criterion and

(c) the (intra-week) unemployed days of those classified as employed according to the priority criterion of *current weekly status* approach.

This third measure of unemployed can be considered as the most inclusive rate of *unemployment.*

3.3.2 Unemployment Rates

3.3.2.1 *Unemployment rate* is defined as the number of persons (person-days in the *cds* approach) unemployed per 1000 persons (person-days in the cds approach) in the *labour force* (which includes both the employed and the unemployed). This, in effect, represents the unutilised portion of the labour force. Thus, it is a better indicator of the unemployment situation in a population than the *proportion unemployed (PU),* which is defined as the number of the unemployed per

thousand persons in the population as a whole. Proportion unemployed is identical to unemployment rate multiplied by labour force participation rates. Discussions in this section is mainly focused on unemployment rate. Differences in *unemployment rate(UR)* and *proportion unemployed (PU)* are explained wherever needed.

Statement 22: Unemployment rate (per 1000) according to *usual status*, *current weekly status* (*cws*) and *current daily status* (*cds*) approach during 2007-08

Ref: Tables 6, 7, 8 and 9 in Appendix A

3.3.2.2 Statement 22 presents the unemployment rates (UR), at the all-India level, as obtained from the present survey according to the three approaches. The unemployment rates, derived according to usual *principal status*, *usual (adj.),* cws and *cds* for each State/U.T have been presented in Statement 22.1, Statement 22.2, Statement 22.3 and Statement 22.4 respectively. Some of the important points emerging from this Statement are:

(i) at the all-India level, unemployment rate was nearly 8 per cent in the *cds* approach. The unemployment rate stood at nearly 4 per cent in cws and 2 per cent in the *usual status approach*, i.e., in *usual (adj.);*

(ii) in the urban areas, unemployment rates were higher compared to rural areas in both *usual (adj.)* and *cws*, but was lower in the *cds*. The unemployment rates for the urban areas in the *usual (adj.)* was 4 per cent compared to 2 per cent in the rural areas and 5 per cent in *cws* in the urban areas compared to 4 per cent in the rural areas. In *cds* the rate was nearly 7 per cent in the urban areas and 8 per cent in the rural areas;

(iii) substantially higher unemployed person-day rates (in *cds*) than the rates obtained on the basis of *usual (adj.)* or *current weekly status* approach, reflected in point (i) and (ii) above indicate a high degree of seasonal and intra-seasonal unemployment.

(iv) in the rural areas, generally, the female unemployment rate was lower than the male unemployment rate, in all the approaches of measurement, but this trend reversed in the case of urban areas. In the rural areas, female unemployment rate stood at 8 per cent in *cds* compared to 9 per cent for males while in the urban areas, female unemployment rate in the cds was nearly 10 per cent which was 3 percentage point higher compared to male unemployment rate. Similar differences existed for *usual (adj.)* and *cws* also. Thus, though gender differential was noted in the unemployment rates in both the rural and urban areas, the magnitude was different in the rural and urban areas;

(v) it is seen that the magnitude of unemployment rate was higher than the proportion unemployed (PU), which is defined as the number of *unemployed person (person-days*) per 1000 of person (*person-days).* For males, the UR was almost double in all the approaches in both rural and urban areas. For rural females the UR was 5 times of PU in the cds approach and 4 times in each of *cws* and *usual status* approach. In the urban areas, for females, the UR was nearly 8 times of PU in the cds approach and 7 times in cws approach and *usual (adj.).* The difference between PU and UR is explained by differences in labour force participation rates.

3.3.2.3 *Change in unemployment rate*: Statement 23 presents unemployment rates obtained from surveys of NSSO conducted since 1993-94 (NSS 50th round). The Statement shows that compared to 1993-94, during 2007-08, for males in the rural areas, *unemployment rates* in *us (adj.)*, as well as in the *cws* approach increased by nearly 1 percentage point (from 1 per cent in 1993-94 to 2 per cent in 2007-08 in *us (adj.)*, and from 3 per cent to 4 per cent in *cws* approach during this period) while the UR in the *cds* approach increased by nearly 3 percentage point during this time period (from 6 per cent in 1993-94 to 9 per cent in 2007-08). The rural female UR has also increased, during 1993-94 to 2007-08, from nearly 3 per cent to 4 per cent in cws approach and from 6 per cent to 8 per cent in *cds* approach but remained static at around 1 per cent in the *us (adj.)*. In the urban areas, unemployment rate for males, during these time periods, in *us (adj.)* remained static at 4 per cent and in *cws* as well as *cds* approach the UR remained static at 5 per cent and 7 per cent respectively at both the time periods. It is seen that female UR in the urban areas had decreased modestly during this time period in all the approaches. The female UR in the urban areas during 1993-94 to 2007-08, decreased from 6 per cent to 5 per cent as per *us (adj.)*, the decrease was from 8 per cent to 7 per cent in *cws* approach and from 11 per cent to 10 per cent in *cds* approach.

3.3.3 Unemployment Rates for Different Levels of Education in Selected Age Groups

3.3.3.1 Unemployment rates for different levels of education in selected age groups obtained according to the *usual status* (*ps+ss*) approach are discussed as follows. For working out such education specific unemployment rates, the persons of age 15 - 29 years and 15 years and above have been considered. These persons have been classified into 8 categories viz., '*not literate*', '*literate and up to primary*', '*middle*', '*secondary*', '*higher secondary*', '*diploma/certificate*', '*graduate*' and '*post graduate and above*'. The education-level specific *usual status* (*ps+ss*) unemployment rates for persons of different age groups have been presented in Statement 24. The URs for each State/U.T for the age group 15-29 years and for the age 15 years and above have been presented in Statement 24.1 in Statement 24.2 respectively.

Statement 24: Education-level specific *usual status* (*ps+ss*) unemployment rate (UR) for persons of age groups *15-29* and 15 years and above during 2007-08

all	18	11	16	37	53	40	24	17	22

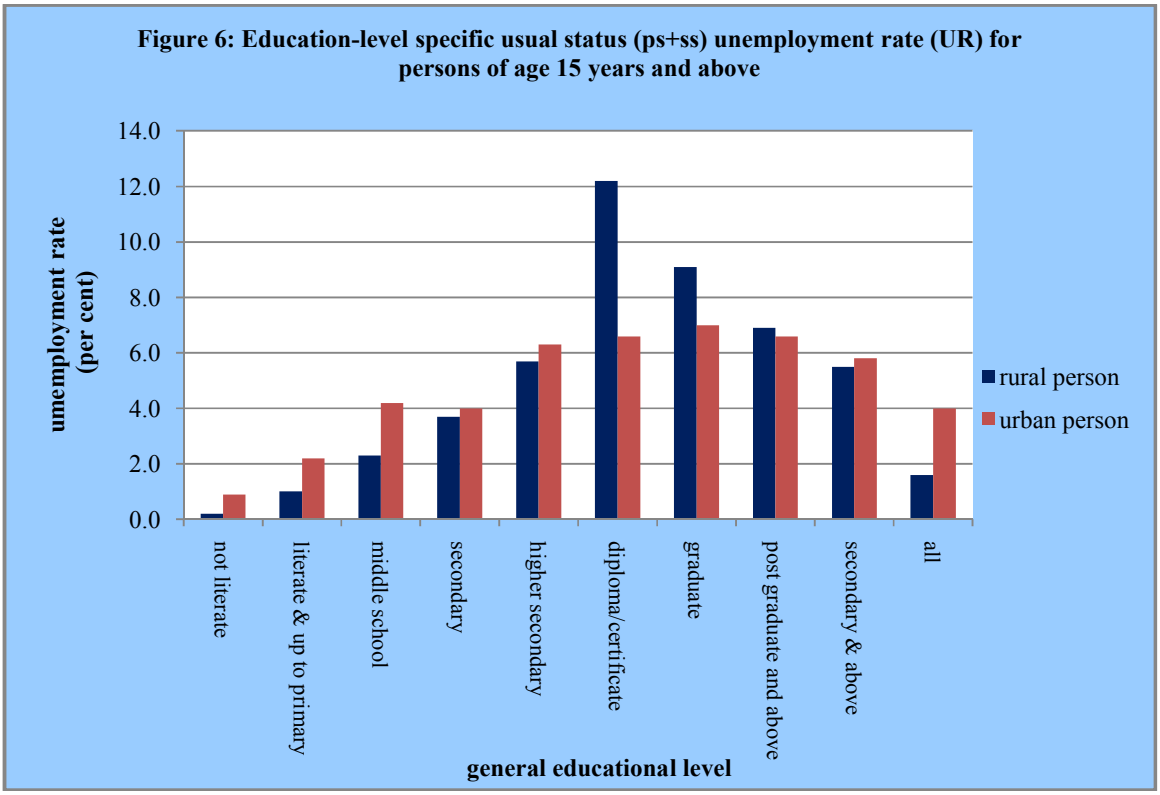
Ref: Table 17 in Appendix A

3.3.3.2 *Unemployment rates among persons of age 15-29 years:* Unemployment rate for the age group 15-29 was 10 per cent for urban areas and 4 per cent for rural areas, with female unemployed rate in the rural areas lower than their male counter parts by 2 percentage points while it is higher in the urban areas by 4 percentage points. It is seen that the unemployment rates, for age group 15-29 years, in both rural and urban areas, have increased, generally, with the increase in the level of education, though for males and females in rural areas and males in

urban areas there was a drop in the unemployment rate for the educational level *post graduate and above*. It is seen that the lowest level of unemployment rate was observed among the *not literates*, less than 1 per cent in rural areas and nearly 3 per cent in urban areas. For those with general education level *secondary and above*, unemployment rate was 11 per cent in the rural and 15 per cent in the urban areas. It may be seen that unemployment rate for female, with higher level of educational level, (i.e., for educational level, *graduate*, *post graduate and above*, *diploma/certificate course* and *secondary and above*), are on the higher side compared to the male unemployment rate for the corresponding level of general education, while in the case of the lower level of educational level (i.e., for educational level *middle level or below* including *not literates*), the male unemployment rates were generally higher, with the only exception for urban females with *middle level* of education, for whom unemployment rate was higher than the males with equivalent educational level.

3.3.3.3 *Unemployment rates among persons of age 15 years and above:* Among the persons with age 15 years and above, the unemployment rate was 4 per cent in the urban areas and 2 per cent in the rural areas, which are considerably lower than those observed for the age group 15 – 29 years. The unemployment rate for this age group was also lowest for the *not literates* and has shown an increasing trend with the increase in the level of general education only to reduce for those with educational level *graduate and above.* The unemployment rate for those with educational level *secondary and above* was 5 per cent for rural males, 10 per cent for rural females, 5 per cent for urban males and 11 per cent for urban females. It is seen that unemployment rates for female, in both rural and urban areas, for any level of general education was higher compared to the male unemployment rates with the same level of general education for all the educational levels except for the *not literates* or those with education level *literate & up to primary*. Different education level specific unemployment rates for the persons in the age group 15 years and above have been presented in Figure 6.

Figure 6: Education-level specific usual status (ps+ss) unemployment rate (UR) for persons of age 15 years and above



3.4 Underemployment

3.4.1 *Underemployment:* Underemployment is commonly defined as the under-utilisation of labour time of the workers. In contrast to unemployment rate which measures the extreme situation of total lack of work underemployment rate is intended to measure the situation of partial lack of work which are embodied among employed measured in longer reference period. For instance, some of the persons categorised as usually employed, do not have work throughout the year due to seasonality in work or otherwise and their labour time is not fully utilised - they are, therefore, underemployed. Their underemployment is termed as *visible* underemployment if they report themselves to be not working in the shorter reference period. The NSS approximates the *visible* underemployment by cross-classifying persons by (a) their usual and *current weekly statuses* (b) their *usual* and *current daily statuses* and (c) their *current weekly* and *current daily statuses.*

3.4.1.1 Some employed persons, particularly the *self-employed*, may appear to work throughout the year. But the work they are pursuing may not fully meet their needs in terms of generating sufficient income, giving a sense of fulfillment to them, etc. They may, therefore, want additional and/or alternative work. Such underemployment is termed as *invisible* underemployment and therefore, not directly measurable. The NSS calculates the indicators of *invisible* underemployment through a set of probing questions addressed to those categorised as usually employed on their availability for additional/alternative work and reason for seeking such additional/alternative work, status of their present engagement (i.e., whether worked more or less regularly), etc. The set of probing questions to try to measure *invisible* underemployment are generally addressed in the quinnquennial surveys of NSSO. In this round, being an annual survey on employment and unemployment situation, such information was not collected. Thus, the discussion in the following paragraphs of this section will deal with the *visible* underemployment only.

3.4.2 Underemployment among Usually Employed

3.4.2.1 As mentioned earlier, some persons categorised as *usually employed (ps+ss)* might not have work throughout the year. They might remain without work during some weeks of the year or go without work on some days of the different weeks of the year. The first dimension is brought out by the distribution of the usually employed by their *current weekly status*. Statement 25 gives the relevant all-India results for persons employed according to *usual status* (*ps+ss*) during 2007- 08 and the corresponding results for each State/U.T. have been presented in Statement 25.1.

Statement 25: Distribution (per 1000) of usually employed (ps+ss) by their broad current weekly status all-India

current weekly status	rural			urban			rural + urban		
	male	female	person	male	female	person	male	female	person
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
employed	957	811	908	984	925	973	964	828	923
unemployed	21	18	20	9	8	9	18	16	18
not in labour force	22	171	72	8	67	19	18	156	60
all	1000	1000	1000	1000	1000	1000	1000	1000	1000

Ref: Table13 in Appendix A

3.4.2.2 It is seen from Statement 25 that the proportion of *usually employed (ps+ss)* males who were found to be not employed (*unemployed+not in the labour force*) during the week preceding the date of survey (*current weekly status*) was 4 per cent in the rural and 2 per cent in the urban areas. The proportion of *usually employed* females (*ps+ss)* not employed (*unemployed+ not in the labour force*) during the week preceding the date of survey was as high as 19 per cent in the rural and 7 per cent in urban areas. It is seen from the Statement that most of the *usually employed (ps+ss)* females who were currently not working were reported to have withdrawn from the labour force and did not report themselves as currently unemployed, resulting in higher share corresponding to the *current weekly status* 'not in labour force' (nearly 17 per cent in rural areas and 7 per cent in urban areas) than in the share of *current weekly status* 'unemployed' (2 per cent in the rural areas and nearly 1 per cent in the urban areas).

Statement 26: Distribution (per 1000) of person-days of usually employed (ps+ss) by their broad *current daily status* during 2007-08
all-India

current daily status	rural			urban			rural + urban		
	male	female	person	male	female	person	male	female	person
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
employed	894	643	810	953	814	927	910	667	837
unemployed	63	46	57	31	31	31	55	44	51
not in labour force	43	311	133	15	155	42	36	289	112
all	1000	1000	1000	1000	1000	1000	1000	1000	1000

Ref: Table14 in Appendix A

3.4.2.3 The activity pattern of the usually employed during different days within the reference week is indicated by the distribution of their person-days by *current daily status*. The relevant results for rural and urban India are presented in Statement 26 and the corresponding results for each State/ U.T. have been presented in Statement 26.1. It is observed that the proportion of person-days of the *usually employed (ps+ss)* utilised for work was quite low for females compared to males. During 2007-08, in rural areas, nearly 89 per cent of the person-days of the *usually employed (ps+ss)* males were utilized for work activities in the *current daily status* and the share for the *usually employed (ps+ss*) urban males was estimated at about 95 per cent. For the *usually employed (ps+ss)* females, the share of the person-days utilized for work in *current daily status* was as low as 64 per cent in the rural areas and 81 per cent in the urban areas. It may be noticed that in the *current daily status* also, most of the females classified as workers in the *usual status* withdrew from the labour force rather than reporting themselves as unemployed, resulting in significantly higher percentage of usually working females reporting not in labour force in the *current daily status* .

3.4.3 Underemployment of workers under Current Weekly Status

3.4.3.1 As mentioned earlier, some persons classified as working during a week might not have had work for the entire week. The distribution of person-days for persons 'working' according to *current weekly status*, into different *current daily status* activities, therefore, would indicate the proportion of person-days on which they had remained without work (*unemployed + not in the labour force).* These results are presented in Statement 27 for rural and urban areas of all-India, separately for males and females and the corresponding results for each State/U.T. have been presented in Statement 27.1 .

3.4.3.2 During 2007-08, for the male workers in the rural areas according to *current weekly status*, nearly 93 per cent of the person-days were utilized for work in the *daily status*, while for the urban male workers nearly 97 per cent of the person-days were utilized for work. Among the female workers (in the *current weekly status*), only 79 per cent of the person-days in the rural areas and 88 per cent of the person-days in the urban areas were utilised for work. The percentage of person-days on which persons with some work during the reference week (according to *current weekly status*) were without work *(unemployed+not in the labour force*) was estimated at about 7 per cent for rural males, 21 per cent for rural females, 3 per cent for urban males and 12 per cent for urban females. However, both in rural and urban areas when there was no work, a higher proportion of females as compared to males withdrew from the labour force.

Statement 27: Distribution (per 1000) of person-days of *current weekly status* employed persons by their broad *current daily status* during 2007-08

all-India

current daily status	rural			urban			rural + urban

Ref: Table15 in Appendix A

3. 5 Employment and Unemployment Situation among Social Groups

3.5.1 It may be noted that the scope of the survey being all households without special focus on social groups, sample design was not tailored for netting special social groups like Scheduled Caste (SC) and Scheduled Tribe (ST) households, etc. Moreover, since ST households are concentrated in a few states and distribution of SC households are also not uniform in all the States, the reliability of state level results become critically dependent on the sample size of the households of the different social groups which happened to be netted in a general-purpose representative sample of households and hence state-level results are not presented here. To study the various features of the employment and unemployment situation among social-groups in India, the distribution of the persons in different social groups for different rounds have been studied first. The specific features of employment and unemployment situation among social groups presented here are LFPR, WPR and UR in all the *usual status* approach, *current weekly status* approach and *current daily status* approach.

3.5.2 Distribution of persons by Social Group

3.5.2.1 The distribution of persons by social group at the all-India level is presented in Statement 28, separately for males and females in the rural and urban areas for NSS 55th , 61st and 64th round. It may be seen that, in 2007-08, at the all-India level, nearly, 9 per cent of the

population belonged to ST, 20 per cent to SC and 42 per cent to OBC[4]. It may be noted that the share of ST in the rural areas was 11 per cent compared to 3 per cent estimated in the urban areas. The share of the SC in rural areas was also higher compared to its share in urban population: 21 per cent of the rural population was SC compared to 15 per cent in the urban areas. The same feature is observed for OBC population also, whose share in rural population was nearly 44 per cent compared to 38 per cent observed in the urban areas. It may be seen that the share of ST and SC population remained static during the time period from 1999-2000 to 2007-08, with ST population nearly 9 per cent and SC population nearly 20 per cent of total Indian population. However, the share of OBC population has increased by nearly 6 percentage point from 36 per cent in 1999-2000 to 42 per cent in 2007-08 and the share of the population categorized as 'others' decreased by an equal magnitude during this time period.

Statement 28: Distribution (per 1000) of persons among different social groups in NSS 55th (1999 - 2000) and 61st (2004 - 2005) and NSS 64th (2007-08) rounds

all-India

3.5.3 Labour Force Participation Rates (LFPR) of different Social Groups

3.5.3.1 The LFPR for persons belonging to different social groups has been presented in Statement 29 separately for *usual status* approach (*ps+ss*), *current weekly status* approach

[4] NSS estimates of proportion of ST or SC households/population are not strictly comparable with the corresponding figures available from Population Census due to the differences in definitions adopted. The NSSO classifies a household (and accordingly all persons within a household) as ST or SC if the informant reports the head of the household to be so. On the other hand, in the Population Census, a person enumerated are classified as belonging to ST or SC if he or she is covered in the list of STs/SCs furnished to the enumerator with respect to his/her State/U.T.. The divergence of the NSS estimates of ST/SC households or population from the Census figures may also partially be due to the limitation of the sample size to which the NSS estimates are subjected to.

(cws) and *current daily status* approach (cds). It is seen that the LFPR in *usual status* (ps+ss) was highest for male ST population in rural areas and male SC and 'other' category of population in urban areas (nearly 58 per cent each) and among the males it was the lowest among OBC (55 per cent) in rural areas and male ST in urban areas (54 per cent). The female LFPR in rural areas was the lowest among the category 'others' (22 per cent) and the highest among ST (40 per cent). In urban areas also, the female LFPR was the lowest among 'others' (12 per cent) and highest among ST (21 per cent). In *current weekly* and *current daily status* also broad features of LFPR for different social groups as observed in *usual status* were retained though the magnitude of LFPR in *current statuses* are lower than those observed in *usual status*. In *current weekly status* as well as in *current daily status*, the female LFPR was lowest for 'others' in both the rural and urban areas and among males the LFPR was highest among ST in rural areas and among SC in urban areas.

Statement 29: Labour Force Participation Rate (LFPR) according to *usual status* (*ps+ss*), *current weekly status* (*cws*) and *current daily status* (*cds*) approach during 2007-08

3.5.4 Worker Population Ratios (WPRs) of various Social Groups

3.5.4.1 In Statement 30, WPR for different social groups are presented according to *usual status* approach (*ps+ss*), *current weekly status* approach (*cws*) and *current daily status* approach (*cds*). It is seen that, in the *usual status,* among rural males the WPR was the highest among the ST (57 per cent) while it was lowest among SC and OBC (54 per cent each) and among rural females WPR was the highest for ST (40 per cent) and lowest among 'others'(22 per cent). In urban areas, among males, the WPR according to *usual status* was highest among SC and 'others' '(56 per cent each) while WPR was lowest among the ST (51 per cent). Among urban females, in *usual status* the WPR was highest among the ST (20 per cent) and lowest among the 'others' (12 per cent). In *current weekly status* approach, the male WPR in rural areas was highest among the ST and 'others' (nearly 54 per cent each) and in urban areas

it was highest among the 'others' (55 per cent). Among urban females the WPR in *current weekly status* was lowest among '*others'* (11 per cent) and highest among ST (18 per cent). Similar phenomenon was noticed for rural females with highest WPR according to *current weekly status* among ST (32 per cent) and lowest among the 'others' (19 per cent). The WPR in *current daily status* followed same pattern of WPR observed in *current weekly status*, with magnitude being on lower side compared to the corresponding proportions observed in *current weekly status*.

Statement 30: Worker population ratio (WPR) according to *usual status* (*ps+ss*), *current weekly status* (*cws*) and *current daily status* (*cds*) approach during 2007-08

3.5.5 Unemployment Rates (UR) of various Social Groups

3.5.5.1 In Statement 31, UR for different social groups are presented according to *usual status* approach (*ps+ss*), *current weekly status* approach (*cws*) and *current daily status* approach (*cds*). It is seen that in the *usual status*, the UR was higher among urban males for all the social groups compared to the UR observed for corresponding social groups in rural areas and it was highest among urban ST (5 per cent) and lowest among rural ST (nearly 1 per cent). For females, in *usual status*, UR was highest among '*others'* in urban areas (6 per cent) and lowest among the ST and SC in the rural areas (slightly lower than 1 per cent each). The UR in the *current statuses* are considerably higher than corresponding UR in the *usual status* for each social group. In the *current weekly status*, the UR in rural areas was highest for both males and females of SC population (5 per cent each) and in urban areas it was highest for male ST population (7 per cent) and among females it was highest among the female of 'other' category (8 per cent). In the *current daily status*, significant increase in the URs compared to those observed in the *usual status* and *current weekly status*, was observed for each social groups in both rural and urban areas. The *current daily status* UR, in rural areas, was nearly 12 per cent each for both SC male and female. In urban areas, among males, the *current daily status* UR

was highest for ST (11 per cent) and it was lowest for 'others' (6 per cent), while for females UR was nearly 10 per cent each for both SC and OBC and was nearly 8 per cent for ST.

Statement 31: Unemployment rate (UR) according to *usual status* (*ps+ss*), *current weekly status* (*cws*) and *current daily status* (*cds*) approach during 2007-08

3.5.6 Worker Population Ratios (WPRs) of Various Social Groups over the NSS Rounds

3.5.6.1 To study the changes in the WPR over different time points, the proportions of usually employed *(ps+ss)* as estimated from the present survey and those obtained from the earlier quinquennial rounds of NSSO viz., NSS 38th (1983), 43rd (1987-88), 50th (1993-94) and 55th (1999-2000), 61st (2004-05) rounds are presented in Statement 32. It may be noted that the estimates for '*others'* category included OBCs in the 38th, 43rd and 50th rounds, since no separate classification of OBC was available during these rounds. However to make the comparison with '*others'* category of NSS 55th, 61st and 64th rounds comparable with the 'others' category in other NSS rounds, for NSS 55th, 61st and 64th rounds, the figures for WPR considering both '*others'* and 'OBC' is shown in brackets. It is seen that for rural males, the WPR for ST decreased by nearly 2 percentage points during 2007-08 from 59 per cent in 1983 and for SC the WPR has decreased to 54 per cent in 2007-08 from 55 per cent in 1983. Compared to the decrease in male WPR for ST and SC in the rural areas, the WPR for '*others'* has increased by nearly 1 percentage points to reach 55 per cent in 2007-08 from 54 per cent in 1983. For rural females, a general decreasing trend in the WPR for all the social groups has been observed during 1983 to 2007-08. The decrease has been by nearly 8 percentage points for ST (from 48 per cent in 1983 to 40 per cent in 2007-08), 7 percentage point for SC (from 38 per cent in 1983 to 31 per cent in 2007-08) and from 31 per cent in 1983 to 27 per cent in 2007-08 for '*others'*. For urban males a general decreasing trend during 1983 to 2007-08, has been observed in WPR for ST and an increasing trend has been observed in the WPR for SC and '*others'* while for urban females the WPR has decreased for all the social groups.

Statement 32: WPR according to the usual status (ps+ss) for different social groups during 1983 to 2007-2008

50th (1993-94)	234	199	-	145	155
43rd (1987-88)	225	213	-	140	152
38th (1983)	255	205	-	139	151

Note: 1. For 38th, 43rd and 50th rounds, no separate category of social group 'OBC' was there and the category 'others' included 'OBC' category also.
2. Figures in parenthesis under column 5 gives the WPR considering 'others' and 'OBC' to make valid comparison with earlier rounds of NSS, when no separate category for 'OBC' was available.

Appendix A

Detailed Tables

NOTES ON DETAILED TABLES

1. Estimates are provided separately for rural and urban areas and for males and females.

2. The estimates presented in the report, in general, refer to the mid-point of the survey period (July 2007 – June 2008) of NSS 64th round, i.e., 01.01.2008.

3. It may be noted that as the tables are generally presented as 'per 1000 distribution' (Table 12 has been presented in 'per 10000 distribution', since in 'per 1000 distribution' many cell figures are zero), the figures are rounded off. Thus, while using the ratios from the survey results, it is to be noted that the accuracy of these derived aggregates will be limited to the number of significant digits available in the ratio or percentage estimates presented in the report. The estimated aggregates, wherever possible, can be used to get ratios with more significant digits.

4. If there are no sample households/persons in a particular category, the estimates/estimated proportions of households/persons in that category becomes 0. Estimated number per 1000 are also shown as 0, when they are greater than 0 but less than 0.5.

5. In the detailed tables, in some of the deeper classifications, some sample sizes may be small and this may have a bearing on the precision of the corresponding estimates.

Table (1): Number of villages/ UFS blocks, households and persons surveyed by state/ u.t.

Appendix B

Sample Design and Estimation Procedure

Appendix - B

Sample Design and Estimation Procedure

1. **Introduction**

1.1 The 64th round (July 2007-June 2008) of NSS was earmarked for survey on 'Employment-Unemployment and Migration Particulars', 'Participation and Expenditure in Education' and 'Household Consumer Expenditure'. The survey covered the whole of the Indian Union *except* (i) Leh (Ladakh) and Kargil districts of Jammu & Kashmir (for central sample), (ii) interior villages of Nagaland situated beyond five kilometres of the bus route and (iii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year. The period of survey was of one year duration starting on 1st July 2007 and ending on 30th June 2008. The survey period of this round was divided into four sub-rounds of three months' duration each and in each of these four sub-rounds equal number of sample villages/ blocks (FSUs) were allotted for survey with a view to ensuring uniform spread of sample FSUs over the entire survey period.

2. **Sample Design**

2.1 A stratified multi-stage design for rural as well as urban areas was adopted for selection of the sample units for the 64th round survey. The first stage units (FSU) were the 2001 census villages (Panchayat wards in case of Kerala) in the rural sector and Urban Frame Survey (UFS) blocks in the urban sector. However, for the newly declared towns and out growths (OGs) in census 2001 for which UFS were not done (i.e., non-UFS towns), each individual town/ OG was considered as an FSU. The ultimate stage units (USU) were households in both the sectors. In case of large FSUs, i.e., villages/ towns/ blocks requiring hamlet-group (hg)/ sub-block (sb) formation, one intermediate stage was the selection of two hgs/ sbs from each FSU.

2.2 *Selection of the first-stage units*: The various steps involved before making the selection of the FSUs are discussed at length in the following few paragraphs before taking up the issue of selection of USUs within an FSU.

2.2.1 *Sampling Frame for the first-stage units (FSUs)***:** *For the rural sector,* the list of 2001 census villages (Panchayat wards for Kerala) constitutes the sampling frame. *For the urban sector*, the list of latest available Urban Frame Survey (UFS) blocks and for non-UFS towns list of such towns/ OGs was considered as the sampling frame.

2.2.2 *Stratification of the first stage units*: Within each district of a State/ UT, generally speaking, two basic strata were formed as follows:

i) rural stratum comprising of all rural areas of the district and
ii) urban stratum comprising of all the urban areas of the district.

However, within the urban areas of a district, if there were one or more towns with population 10 lakhs or more as per population census 2001, each of them formed a separate basic stratum and the remaining urban areas of the district was considered as another basic stratum. For a few districts, particularly in case of Tamil Nadu, if total number of non-UFS towns in the district exceeded certain number, all such towns taken together formed another basic stratum. Otherwise, they were merged with the UFS towns for stratification.

2.2.3 *Sub-stratification of the first stage units in rural areas*: If 'r' was the sample size allocated for a rural stratum, the number of sub-strata formed was 'r/4'. The villages within a district, as per frame, were first arranged in ascending order of population as per the frame,

then sub-strata 1 to 'r/4' were demarcated in such a way that each sub-stratum comprised a group of villages of the arranged frame and had more or less equal population.

2.2.4 *Sub-stratification of the first stage units in urban areas:* If 'u' was the sample size allocated for a urban stratum, 'u/4' number of sub-strata were formed. The towns within a district, except those with population 10 lakhs or more and also the non-UFS towns, were first arranged in ascending order of population, then, UFS blocks of each town were arranged by IV unit no. × block no. in ascending order. From this arranged frame of UFS blocks of all the towns, 'u/4' number of sub-strata were formed in such a way that each sub-stratum had more or less equal number of FSUs. For towns with population 10 lakhs or more, the urban blocks were first arranged by IV unit no. × block no., in ascending order, then 'u/4' number of sub-strata were formed in such a way that each sub-stratum had more or less equal number of blocks. All non-UFS towns, if available in a district and exceeded a certain minimum number, formed one separate stratum within the district.

2.2.5 *Allocation of FSU's among Strata*: At the all-India level, a total number of 12688 FSUs (7984 villages and 4704 urban blocks) was allocated for survey. The total number of sample FSUs was allocated to the States and UTs in proportion to population as per census 2001 subject to a minimum sample allocation to each State/ UT. While doing so, the resource availability in terms of number of field investigators was kept in view. The State/ UT level sample size was allocated between rural and urban sectors in proportion to population as per *census 2001* with 1.5 weightage to urban sector subject to the restriction that urban sample size for bigger states like Maharashtra, Tamil Nadu, etc., did not exceed the rural sample size. A minimum of 8 FSUs were allocated to each state/ UT, separately, for rural and urban areas. Further, the State level allocation for both rural and urban sectors were adjusted marginally in a few cases to ensure that each stratum got a minimum allocation of 4 FSUs. Within each sector of a State/ UT, the respective sample size was allocated to the different strata in proportion to the stratum population as per *census 2001*. Allocations at stratum level were adjusted to a multiple of 4 with a minimum sample size of 4.

2.2.6 *Selection of first-stage units:* From each sub-stratum of a district of rural sector, 4 FSUs were selected with Probability Proportional to Size With Replacement (PPSWR), size being the population as per *census 2001*. For urban sector, from each sub-stratum 4 FSUs were selected by using Simple Random Sampling Without Replacement (SRSWOR) for UFS towns and by PPSWR in case of non-UFS towns with size being the population as per *census 2001*. Within each sub-stratum, samples were drawn in the form of two independent sub-samples in both the rural and urban sectors.

2.3 *Selection of Ultimate Stage Units within a FSU*: The remaining paragraphs of this sub-section outlines the various steps leading to the actual selection of USUs within a FSU.

2.3.1 *Selection of hamlet-groups/sub-blocks*: Large FSUs having approximate present population of 1200 or more was divided into a suitable number of 'hamlet-groups' in the rural sector and 'sub-blocks' in the urban sector as stated below.

approximate present population of the sample village/block		no. of hgs/sbs to be formed (D)
less than 1200	(no hamlet-groups/sub-blocks)	1
1200 to 1799		3
1800 to 2399		4
2400 to 2999		5
3000 to 3599		6
……..and so on		

For rural areas of Himachal Pradesh, Sikkim and Poonch, Rajouri, Udhampur, Doda districts of Jammu and Kashmir and Idukki district of Kerala, the number of hamlet-groups formed was as follows.

approximate present population of the sample village		no. of hgs to be formed
less than 600	(no hamlet-groups)	1
600 to 899		3
900 to 1199		4
1200 to 1499		5
……..and so on		

Two hamlet-groups (hg)/ sub-blocks (sb) were selected from a large FSU wherever hamlet-groups/ sub-blocks had been formed, by SRSWOR. Listing and selection of the households were done independently in the two selected hamlet-groups/ sub-blocks.

2.3.2 *Sampling frame of households*: All households listed in an FSU constituted the sampling frame of households. All the households listed in the selected FSU/ hamlet-groups/ sub-blocks were stratified, for Schedule 10.2, into three second stage strata (SSS) as given below:

SSS 1:	households having at least one out-migrant and received at least one remitance from him/ her during last 365 days
SSS 2:	remaining households having at least one other type of migrants, including temporary out-migrants, for employment purpose
SSS 3:	other households

2.3.3 Selection of households: For the survey on employment & unemployment and migration particulars (Schedule 10.2), 10 households were selected from each sample FSU. In both rural and urban areas, in case no hamlet-group/sub-block formation was done in the FSU, the number of households selected from the second stage strata SSS1, SSS2 and SSS3 were 2, 4 and 4, respectively. In case hamlet-groups/sub-blocks were formed in the village/block, the number of households selected from the second stage strata SSS1, SSS2 and SSS3 were 1, 2 and 2, respectively, for each of the hamlet-groups/sub-blocks. The sample households from each of the second stage strata were selected by SRSWOR.

2.4 Number of FSUs allotted for survey in the NSS 64th round along with the number of FSUs actually surveyed and number of persons enumerated in respect of the survey on employment & unemployment and migraton particulars (Schedule 10.2) are given for different states and union territories in Table 1 at the end of Appendix-B.

3. **Estimation Procedure**

3.1 **Notations:**

s = subscript for s-th stratum

t = subscript for t-th sub-stratum

m = subscript for sub-sample (m =1, 2)

i = subscript for i-th FSU [village (panchayat ward)/ block/ non-UFS town or OG]

d = subscript for a hamlet-group/ sub-block (d = 1, 2)

j = subscript for j-th second stage stratum in an FSU/ hg/sb (j = 1, 2 or 3)

k = subscript for k-th sample household under a particular second stage stratum within an FSU/ hg/sb

D = total number of hg's/ sb's formed in the sample village (panchayat ward) / block/ non-UFS town or OG

D* = 1 if D = 1

= D/ 2 for FSUs with D > 1

N = total number of FSUs in any urban (UFS) sub-stratum

Z = total size of a rural sub-stratum or urban sub-stratum of non-UFS towns or OGs (= sum of sizes for all the FSUs of a sub-stratum)

z = size of sample village/ non-UFS town or OG used for selection.

n = number of sample village/ block/ non-UFS town or OG surveyed including zero cases but excluding casualty for a particular sub-sample and sub-stratum.

H = total number of households listed in a second-stage stratum of a village/ block/ non-UFS town or OG/ hamlet-group/ sub-block of sample FSU

h = number of households surveyed in a second-stage stratum of a village/ block/ non-UFS town or OG/ hamlet-group/ sub-block of sample FSU

x, y = observed value of characteristics *x*, *y* under estimation

$\hat{X}$, $\hat{Y}$ = estimate of population total X, Y for the characteristics *x*, *y*

Under the above symbols,

$y_{stmidjk}$ = observed value of the characteristic y for the k-th household in the j-th second stage stratum of the d-th hg/ sb (d = 1, 2) of the i-th FSU belonging to the m-th sub-sample for the t-th sub-stratum of s-th stratum;

However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

3.2 Estimation of Aggregates for a particular sub-sample and stratum:

3.2.1 *Estimate for a sub-stratum in rural areas*:

(i) For households selected in j-th second stage stratum:

$$\hat{Y}_j = \frac{Z}{n_j}\sum_{i=1}^{n_j}\frac{1}{z_i}D_i^*\left[\frac{H_{i1j}}{h_{i1j}}\sum_{k=1}^{h_{i1j}}y_{i1jk} + \frac{H_{i2j}}{h_{i2j}}\sum_{k=1}^{h_{i2j}}y_{i2jk}\right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

3.2.2 *Estimate for a sub-stratum in urban areas:*

(i) For households selected in j-th second stage stratum:

$$\hat{Y}_j = \frac{N}{n_j}\sum_{i=1}^{n_j} D_i^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right] \text{ for UFS sub-stratum,}$$

$$\hat{Y}_j = \frac{Z}{n_j}\sum_{i=1}^{n_j} \frac{1}{z_i} D_i^* \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right] \text{ for non-UFS sub-stratum}$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

3.2.3 *Estimate for a stratum of a sub-sample*:

$$\hat{Y}_s = \sum_t \hat{Y}_{st}$$

3.2.4 *Overall Estimate for Aggregates*::

Overall estimate for aggregates for a stratum ($\hat{Y}_s$) based on two sub-samples is obtained as:

$$\hat{Y}_s = \frac{1}{2}\sum_{m=1}^{2} \hat{Y}_{sm}$$

3.3 *Overall Estimate of Aggregates at State/UT/all-India level:*

The overall estimate $\hat{Y}$ at the State/ UT/ all-India level is obtained by summing the stratum estimates $\hat{Y}_s$ over all strata belonging to the State/ UT/ all-India.

3.4 *Estimates of Ratios*:

Let $\hat{Y}$ and $\hat{X}$ be the overall estimate of the aggregates Y and X for two characteristics *y* and *x* respectively at the State/ UT/ all-India level.

Then the combined ratio estimate ($\hat{R}$) of the ratio $(R = \frac{Y}{X})$ will be obtained as $\hat{R} = \frac{\hat{Y}}{\hat{X}}$.

3.5 Estimates of Error: The estimated variances of the above estimates will be as follows:

3.5.1 For aggregate $\hat{Y}$:

$$\hat{Var}(\hat{Y}) = \sum_s \hat{Var}(\hat{Y}_s)$$

where $\hat{Var}(\hat{Y}_s)$ are as given below.

3.5.1.1 For strata with PPSWR selection at first stage:

$$\hat{Var}_{ppswr}(\hat{Y}_s) = \left[\sum_t \frac{1}{n_{st}(n_{st}-1)} \sum_{i=1}^{n_{st}} \left(\frac{Z_{st}\hat{Y}_{sti}}{z_{sti}} - \hat{Y}_{st} \right)^2 \right],$$

where $$\hat{Y}_{sti} = \sum_j Y_{stij},$$

$$\hat{Y}_{stij} = D^*_{sti} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

3.5.1.2 For strata with SRSWOR selection at first stage:

$$\hat{Var}_{srswor}\left(\hat{Y}_s\right) = \sum_t \frac{1}{4}\left(\hat{Y}_{st1} - \hat{Y}_{st2}\right)^2 \quad ,$$

where $\hat{Y}_{st1}$ and $\hat{Y}_{st2}$ are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't'.

3.5.2 For ratio $\hat{R}$:

$$\hat{MSE}(\hat{R}) = \frac{1}{(\hat{X})^2} \left[\sum_s \hat{MSE}_s(\hat{R}) + \sum_{s'} \hat{MSE}_{s'}(\hat{R}) \right]$$

where s, s' indicate respectively the strata with PPSWR and SRSWOR selection at first stage.

3.5.2.1 For strata with PPSWR selection at first stage:

$$\hat{MSE}_s(\hat{R}) = \sum_t \frac{1}{n_{st}(n_{st}-1)} \sum_{i=1}^{n_{st}} \left[\frac{Z_{st}}{z_{sti}} (\hat{Y}_{sti} - \hat{R}\hat{X}_{sti}) - (\hat{Y}_{st} - \hat{R}\hat{X}_{st}) \right]^2$$

where

$$\hat{Y}_{sti} = \sum_j \hat{Y}_{stij} \quad , \quad \hat{X}_{sti} = \sum_j \hat{X}_{stij} \quad ,$$

$$\hat{Y}_{stij} = D^*_{sti} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{si1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{si2j}} y_{i2jk} \right],$$

$$\hat{X}_{stij} = D^*_{sti} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{si1j}} x_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{si2j}} x_{i2jk} \right]$$

3.5.2.2 For strata with SRSWOR selection at first stage:

$$\hat{MSE}_{s'}(\hat{R}) = \sum_t \frac{1}{4}\left[\left(\hat{Y}_{s't1} - \hat{Y}_{s't2}\right)^2 + \hat{R}^2\left(\hat{X}_{s't1} - \hat{X}_{s't2}\right)^2 - 2\hat{R}\left(\hat{Y}_{s't1} - \hat{Y}_{s't2}\right)\left(\hat{X}_{s't1} - \hat{X}_{s't2}\right)\right]$$

where $\hat{Y}_{s't1}$ and $\hat{Y}_{s't2}$ are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's'' and sub-stratum 't'.

3.6 *Estimates of RSE:*

$$\hat{RSE}\left(\hat{Y}\right) = \frac{\sqrt{\hat{Var}\left(\hat{Y}\right)}}{\hat{Y}} \times 100$$

$$\hat{RSE}\left(\hat{R}\right) = \frac{\sqrt{\hat{MSE}\left(\hat{R}\right)}}{\hat{R}} \times 100$$

Table 1: Number of FSUs allotted, number of FSUs surveyed and number of persons enumerated in different states and union territories

Note: 1. Projected population as on 1st March 2007 and 1st March 2008 are from RGI (reference Tables 8 and 9 of the Population Projections for India and States: 2001-2026).

2. Table 8 provides projected population as on 1st March 2007 and 1st March 2008 for rural+urban combined and Table 9 provides projected population as on 1st March 2007 and 1st March 2008 for urban.

3. Projected population as on 1st January 2008 has been derived using the formula, A= $A\ 1 * [\frac{A2}{A1})^{[1/1\ 2]}]^{1\ 0}$, where A1 is the population for 1st March 2007 , A2 is the population for 1st March 2008 and A is the population for 1st January 2008.

4. Projected population as on 1st January 2008 has been derived for the rural+urban and urban separately and that for rural has been derived by subtracting these two.

Note: 1. Projected population as on 1st March 2007 and 1st March 2008 are from RGI (reference Tables 8 and 9 of the Population Projections for India and States: 2001-2026).

2. Table 8 provides projected population as on 1st March 2007 and 1st March 2008 for rural+urban combined and Table 9 provides projected population as on 1st March 2007 and 1st March 2008 for urban.

3. Projected population as on 1st January 2008 has been derived using the formula, A= $A\ 1 * [\frac{A2}{A1})^{[1/1\ 2]}]^{1\ 0}$, where A1 is the population for 1st March 2007 , A2 is the population for 1st March 2008 and A is the population for 1st January 2008.

4. Projected population as on 1st January 2008 has been derived for the rural+urban and urban separately and that for rural has been derived by subtracting these two.

Statement 1.1: Projected population (000) as on 1st March 2007, 1st March 2008 and 1st January 2008 for each State/U.T

male+female
