PREFACE

The role of mining and quarrying in the Indian Economy needs no emphasis. The contribution of this sector to the gross domestic product (GDP) is estimated in terms of gross value added (GVA) using the production approach. The estimation of GVA involves valuation of the products and by-products and ancillary activities at the prices received by the producers and deducting there from the value of inputs of raw materials and services consumed in the process of production at purchasers' prices. In this context, information on state-wise value of output assumes considerable importance. With this in view, a brochure containing state-wise value of output of mining and quarrying activities is being published by Central Statistical Organisation. The present publication is the second in the series giving the state-wise estimates of value of output of different minerals with base year as 1999-2000. The earlier publication containing the state-wise estimates of value of output from mining and quarrying activities was published in 2006, giving the value of output from 1993-94 to 2003-04 both at current and constant prices with base year 1993-94.

Suggestions and recommendation of the users shall be highly appreciated.

INTRODUCTION

For the purpose of preparation of estimates of value added, the Mining & Quarrying sector has been divided into two broad groups, viz. major minerals & minor minerals. Major minerals cover fuel minerals, metallic and non-metallic minerals.

VALUATION OF OUTPUT OF MINERAL PRODUCTION

The sources of data and the methods used in the preparation of value of output are outlined as under:

A. Major Minerals

(a) Fuel Minerals

1. Coal: The estimates of value of output are compiled separately for Public & Private Sector.

Public Sector - Almost entire activity of coal mining is in the public sector. The All India estimates of the value of output are obtained from the analysis of reports of Public Sector companies (Coal India Ltd. and its subsidiaries).

Private Sector - The Coal Controller of India publishes year-wise estimates of public and private sector production of coal. The share of private sector's production of coal to the total coal production is worked out in terms of quantity. Using this ratio, the private sector estimates of value of output in respect of coal are compiled.

2. Lignite: The quantity and value of output estimates are provided by IBM.

3. Petroleum & Natural Gas: The data on production & prices is taken from the Report on Basic Statistics on Indian Petroleum & Natural Gas brought out by the Ministry of Petroleum and Natural Gas.

The value of output is estimated as under:

- The gross value of output of crude oil is evaluated by multiplying the price with the quantity of crude oil at CTF.
- In case of natural gas, the value of sale of gas sold to consumers is taken into account.
- In addition, the sale value of output of products other than crude oil and natural gas such as condensate, wax, distillate, waste, Natural Gas Liquid (NGL), sludge etc., are also included.
- As the elements of cess and sales-tax (as percentage of value of output) are included in the value of output at CTF prices, these are deducted from the Gross Value of Output (GVO) at CTF prices to obtain GVO at factor cost.

(b) Metallic & Non-Metallic Minerals: The primary source of data on production of metallic and non-metallic minerals is the monthly and annual returns received by IBM under the statutory provisions of the Mineral Conservation & Development Rules (MCDR), 1958. The quantity and value of production data are obtained from the IBM publication Monthly Statistics of Mineral Production (MSMP). The data used for estimation are generally the sale value of the mineral at the mine site or pit head. In case of captive mines, the value of output is obtained on the basis of cost of production. The value of atomic minerals is obtained from the Department of Atomic Energy, Indian Rare Earths Ltd. and Kerala Minerals and Metals Ltd.

The value of output at state level is obtained by multiplying the quantity of metal and non-metal outputs with the respective prices. These estimates are then consolidated to get the national level estimates.

In the new series 1999-2000 the salt production by evaporation of sea water has also been taken into account. The data on production of salt through evaporation of sea water for the year 1999-2000 has been captured from the Salt Commissioner's office.

B. Minor Minerals: Data on minor minerals relate to value only. The quantity figures are not uniformly available for all states. Minor minerals are those which are declared as such by the Central Government in exercise of the powers conferred by Section I (a) of the Mines & Minerals (Regulation & Development) Act, 1957. They are further revised and notified from time to time in the Gazette of India. Their statistics are collected by the State Geological Departments under the Minor Mineral Concession Rules framed by the respective State Governments for regulating the extraction of such minerals. These data are furnished by the concerned State Geological Departments to the IBM.

Estimates at Constant Prices

The value of output of minerals for each state at Constant (1999-00) prices is derived by evaluating the quantity of current year output of each major mineral at the corresponding pit-head implicit basic prices of 1999-00, computed from the annual accounts of the companies. In the case of minor minerals, which are reported in value terms only, the ratio of value of output of the total non-metallic minerals at constant to current prices for each state is multiplied by the value of output of the minor minerals at current prices to obtain the value of the output at constant (1999-00) prices.
