REPORT ON INDEBTEDNESS SURVEY AMONG SCHEDULED TRIBE POPULATION OF HIMACRAL FRADESH.

SECTION ONE

ingroduction

1.1 In Eimachal Fradest, the districts of Linnaur, Lahaul & Spiti and Chamba form the tribal belt of the State. This is a hilly region marked by snow, glaciers, high altitudes and highly rugged terrain. The inaccessibility of these areas for more than half the year and limited working season have far-reaching effects on its economy and the socio-economic conditions of the people. In terms of area the tribal belt accounts for 43 per cent of the total geographical area of the State although the population content is only 3,30 per cent of the total.

Prior to independence little attention was paid to these farflung areas but after independence, various development programmes
have been undertaken with the object of developing these areas and
improving the economic conditions of the people. Since collection of
basic statistics on socio-economic conditions of the people and the
facilities available in different regions is an important requirement
for formulation of these programmes, the State Government has undertaken statistical surveys in a systained manner through the National
Sample Survey (NSS). One of them is the Survey on Household Indebtedness considered in this report.

1.2 In fact it was at the specific suggestion of the Government of Himachal Pradesh that this enquiry on household indebtedness among the tribal people of the State was undertaken by the NSSO in its 31st round programme of work. (This present of course in addition to the main enquiries on irrigation and electrification conducted in the 31st round). The enquiry was conducted in the rural areas of the districts Einnaur, Lahaul & Spiti and Chamba which constitute the tribal belt. The survey was simed at collecting details regarding nature and extent of indebtedness as well as information on purpose, sources, securities, interest rates of loans taken and availability of financial institution etc. in the region. The enquiry was conducted both in the Central and the State samples. The present report is based on the Central sample results,

- 1.3 Schedules of enquiry: The enquiry consisted of the following three schedules.
 - 1. Schedule 0.1 : List of households.
 - 2. Supplement to Schedule 3.1: Village schedule for indebtedness encuiry.
 - 3. Schedule 8.1: Household indebtedness survey in Hima-chal Procesh.

Schedule 0.1 was used for listing all the households in the sample villages, preparing the sampling frame and selecting sample households for schedule 8.1. The second schedule was meant for collecting some general information about existence of financial production and economic assistance facilities in the villages. Schedule 8.1 was the main schedule in which detailed particulars of indebtedness of households were collected.

- 1.4 <u>Period of Survey</u>: The field work was conducted during, the first sub-round of 31st round i.e. during July to September, 1976.
- Reference period: The fiference period for the data collected on dues payable and receivable by the households relate to the transactions made during 1st July 1975 to 30th June 1976, and the positions as on 30th June 1975 and 30th June 1976. Information on other items such as availability of financial institutions, inherited loans etc. relates to the date of survey.
 - 1.6 Sample size: The sample consisted of 48 sample villages and 24 households in each sample village. Schedule 8.1 was canvessed in all the scheduled tribe households among the selected bouseholds. The number of sample tribal households was 407.

SECTION TWO -

CONCEPTS AND DEFINITIONS

The following concepts and definitions were adopted in this survey :-

- 2.1 <u>Household</u>: A group of persons normally living together and taking food from a common kitchen constituted a household. The members of a household may or may not be related to one another.
 - Land Owned: It includes land owned with permanent heritable possession with or without right to transfer title, land held on a long term lease usually for a period of 30 years or more, land possessed by tribals in accordance with tribal right from local bedies, district council or community ownership etc. Illegal possession in any form has not been treated as land owned.
 - 2.3 Agricultural Labour: A bousehold was considered as an agricultural labour household if its major income during last one year was from wage paid manual labour in agricultural occupations.
- 2.4 Marginal farmer: A household was categorised as marginal farmer if it possessed an irrigated land upto 0.5 hectare or unirrigated land upto 1.0 hectare on the date of survey and its major occupation was agriculture. In case a farmer held both types of land then half hectare of irrigated land was counted as one hectare of unirrigated land, and he was classified as a marginal farmer if the total area on the basis of this conversion ratio did not exceed one hectare.
- 2.5 Small farmer: A household was considered as small farmer if it possessed an irrigated land more than 0.5 hectare, but less than 1.0 hectare or unirrigated land more than 1.0 hectare but less than 2.0 hectares on the date of survey and its major occupation was agriculture. In case a farmer held both types of land then he was classified as a small farmer if the total area (calculated on the above basis) did not exceed 2.0 hectares.

- 2.6 Occupation classes: A briak description of the codes of the occupation classes used in the tables is given below.
- 1) Occupation divisions 0 = 1 and 2: These include profess, ional, technical and related workers, administrative, executive and managerial workers.
- 2) Occupation divisions 3, 4 and 5: These include clerical and related workers, sales workers and service workers.
- 3) Occupation divisions 7, 8 and 9: These include production and related workers, transport equipment operators and labourers.
- 4) Occupation group 61: All types of cultivators.
- 5) Occupation group 62: Farmers other than cultivators like planters, livestock farmers, dairy farmers, roultry farmers, insect rearers, orchard, vineyard and related workers.
- 6) Occupation group 63: All types of agricultural labourers.
- 7) Occupational group 64: Flantation labourers and related workers.
- 8) Occupational group 65: Other farm workers such as farm machinery/tractor operators, farm workers in animal, bird and insect rearing, gardeners and nursery workers and other farm workers not mentioned above.
- 9) All other groups: All other occupation classes not covered under any group or division mentioned earlier.
- 2.7 Cash loan: All loans taken in cash are considered as cash dues payable even if they are repaid in kind.
- 2.8 Commodity loan: All loans taken in kind irrespective of whether they are repaid in cash or in kind are regarded as commodity loans. The value of a commodity loan was evaluated at the current market price prevailing in the locality during

the reference period. The quantity to be paid in excess to the quantity originally borrowed was considered as interest and its imputed value was recorded as interest.

- 2.9 Short term losa: A losa taken for a period of 12 months or less was classified as short term losa.
- 2.10 <u>Medium term loan</u>: A loan taken for a period ranging from 1 to 8 years was classified as medium term loan.
- 2.11 Long term loan: A loan taken for a period exceeding three years was regarded as long torm loan.
- 2.12 Credit Agency: The loans from verious credit agencies.
 were classified under: 1) dovernment, (2).Co-operative Society
 of Co-operative Bank, (3) Commercial Bank, (4) Insurance,
 (5) Provident Fund, (6) Landlord, (7) Agricultural Money lander,
 (8) Professional money lander (9) Trader, (10) Relative and
 friend, (11) Others. Some of these agencies are explained below:-

Government: All loans borrowed from government departments_like revenue, spriculture, industries, community development/petional Extension Service blocks etc. as also those channelised by the government through the Khadi and Village Industries Board were classified under this category.

Co-overatives: All loans from Co-operative institutions like primary co-operative credit societies, grimary co-operative marketing societies, district or central co-operative banks, primary orcentral land development banks, handloom weavers' co-operative societies and other industrial or other types of co-operative societies were grouped under this head.

Commercial banks: All loans taken from convercial banks including nationalised banks, regional rural banks and State Bank of India and its subsidiaries were considered as loans taken from Commercial Banks.

Insurance: This included bife Insurance Corporation and other insurance funds.

Provident fund: This included contributory provident fund, general provident fund and an other provident fund.

Lindlord: Loans given by landlords to their own tenents were, classified under this head, Loans advanced by landowners to persons of er than their tenants were classified under other beads depending on the occupation of the landowner.

Agricultural money-lender: An agricultural money-lender was defined as one having agriculture as his major pecha tion and money-lending as a subsidiary business.

Professional money-lender: A professional money-lender was defined as a person receiving a major part of his income from money lending.

Trader: A trader was defined as a person having trading as his principal occupation.

Relative and friend: Loans received from any relative or friend free of interest were classified as loans from relatives and friends. If, however, a loan carried any interest, it was classified under an appropriate agency such as agricultural money-lender, trader etc. depending on the occupation of the person advancing fix loan.

Other Credit Agencies: Any other creditor not covered by the above categories was recorded as jothers!

2.13. Security: Regarding security the terms 'simple martgage' dusufructuary mortgage' impregage of immovable property' and 'first charge on immovable property need some clarification.

Simple mortgage: In this case the mortgager (i.e. the person who mortga es the property) retains ownership and possession of the property mortgaged.

<u>Usufructuary mortgage</u>: In this case the ownership of the property remains with the mortgager but the possession with the mortgages (i.e. the person to whom the mortgage is given). Income from the property acques to the mortgages and the mortgage is terminated as soon as the full amount is realised.

When a single charge was created on immovable property, it was taken as mortgage of immovable property.

The first charge on immovable property was the charge on immovable property created by the first mortgages when there were more than one mortgages for the same property. In such a case the liability of a particular mortgages was not cleared unless the liabilities of mortgages preceding him were cleared.

2.14 Purcose of long: Some important terms are explained below:

Farm business: In addition to cultivation including cultivation of plantation and ordered crops, farm business was taken to comprise all activities allied to agriculture such as processing of the produce on the farm, animal husbandry, livestock rearing, fishing, dairying, bee keeping etc.

Non-farm husiness: Non-farm business was defined to include all the household economic activities other than those covered in farm business. Thus, it comprised mining and quarrying, manufacturing and repairing, trading and transport as also all other professions and services.

Capital expenditure: The expenditure incurred on account of purchase and reclamation of land, other land improvements, purchase, construction, additions, alterations and major repairs of buildings, orchards, plantations, irrigation resources, wells, production machinery, equipments, tools and implements, transport equipments, furniture and fixtures, farm houses, grain golas, animal shed; purchase of livestock etc. constituted capital expenditure in farm or non-farm business as the case might be,

Current expanditure: The expenditure incurred on account of purchase of seeds, manure, fertilizers, raw materials, merchandise, fuel and lubricants, electricity and water clarges, payments of rent, water and salaries, hirs clarges of implements and machineries, hiring of animals and agricultural implements, transport and service clarges, benefits in kind, interest on loans taken for the chiesprise, land revenue, case, etc. constituted current expenditure.

: 9 : SECTION THREE

FINANCIAL INSTITUTIONS IN TRIBAL AREAS

3.1 A summary of the survey findings obtained from canvassing of the village schedule 3.1 is given in subsequent paragraphs. The particulars relate to availability of financial institutions in rural areas, number of financial agencies in the villages and usual rates of interest charged for loans given in the three districts of Kinnaur, Lahaul & Spiti and Chambs.

38.6%
3.2 It is observed that 35.6% and 31.2% of the villages of these districts were served by the co-operative credit societies, post office savings banks and commercial banks respectively, whereas . 59.4% of the villages were not served by any kind of financial institution.

Regarding distance of financial institutions, the percentage distribution of villages by distance classes is shown below :-

	Financial		percentage of villages in distance class (km).				
	institution	less than1	1 to 2.9	3 to 4.9	5 to 9.	9 10 or	All *
	(1)	(2)	(3)	(4)	(5)	(8)	(7)
1,	co-operative dredit soci- ety	1.3	26.4	31,9	16.0	23,6	100.0
2.	post office mavings benk	6.1	3.6	24.2	24,6	40.8	100.0/
3,	commercial bank	1.1	4.9	6.7	27.5	58.8	10010

^{*} including not recorded cases.

3.3 As to financial agencies existing within the villages, the number of money lenders and temple/devta agency for loss per village were found to be 0.50 and 0.10 respectively. The money-lenders usually charged interest parting from 10 to 20 per cent Whereas the interest rate for temple/devta agency varied from 0 to 10 per cent. There was no indigenous banker or any other agency in any village.

3.4 As regards projects for the weaker sections of the people it is observed that only about 6 per cent of the villages were covered by the T.D Block project (Tribal Development) but no village was reported to have the facilities of NTAL (Marginal Farmer and Agricultural Labourer) of SFDA (Small Farmer Development Agency) projects. More details about financial institutions can be seen in the Tables given in Appendix I.

____0___

PECTION FOUR

STANCE YEARNUS

The findings of the survey on major sepects of cash and commodity loans taken by the scheduled tribe population are presented in a summary form in this section. However, before going into the details of the types and amount of loans, some general characteristics of the tribal population relating to their occupational pattern and ownership of land are presented in Tables 1 and 2 shown below:

Table (1) : Fercentage distribution of tribal households by occupation group.

Occupation group p.c.	of households
(1)	(2)
1. cultivator	70
2. agriculturel lebourer	10

5 5.00 ± 9.99	9
# 10.00 - above	1
7, All Classes	100

Eighlights of Cash Loan

- 4.2 It was observed that the percentage of households reporting outstanding cash loap was 21,62 on 30.6.1975 and 30.86 on 30.6.1976. Although the propertion of indebted households had increased during 1975 to 1978 the amount of cash loan per indebted household decreased from Rs. 1169 to Rs. 1033. A little more than 13 per cent households took loan during the one year period 1.7.75 to 30.6.1976, the amount being Rs. 588 per borrowing household. Thus, it works out that about 4 per cent of households repaid their losus fully during the reference year.
- 4.3 The total number of cash loans outstanding on 30.6.76 was 9340 with the average original loan value (excluding interest) as Rs. 713. Some major characteristics of these loans are presented in a condensed form in Table 3 below.

Table (3): Number and average amount of cash loans by purpose, source, rate of interest, period and type of security.

- 4 Some interesting features of cash loans are mentioned below:-
- 1. Purpose of loan: The largest number of loanswere taken for the purpose of meeting household expenditure. In fact, 'household expenditure' accounted for 80 per cent of loans. The next invortant purpose was found to be 'others' (22% of loans). That is, for a large number of loans the informants could not or ideat specify the actual reasons for which the loans had been taken. The third important purpose of borrwing was for making capital expenditure in farm business (about 7% of leans).

Regarding the average value of cash loans it is seen that the loanstaken for meeting current expenditure in farm or non-farm business have a higher value than the loans taken for making capital expenditure in that business. This result may seem unusual but in reality it is not so uncommon among the households owning small entergrises. In fact, a similar feature was observed during the All India Debt and Investment Survey conducted during the 26th round (1971-72). In Zimachal Fradesh as well as in some other states or regions within states, households ferorted

higher loan values for meeting surrent expenditure of enterprises, (vide the report 'Statistical Tables relating to Cash Dues outstanding against Rural Eduseholds as en 30 June, 1971' published by the Reserve Bank of India).

- 2. <u>Period of loan</u>: Most of the loans were short term loans taken for a period of less than 12 months. This was quite expected since the loans were taken mainly for running t a household. However, the average value (Rs. 590/-) of short term loans was nearly half of the average value (Rs. 1029) of long term loans.
- source of loan; The principal source of borrowinh was relatives and friends! (46 per cent of loans) followed by 'trader' (23 p.c.) and 'government' (9 p.c.). Agricultural money leaders and professional money leaders together advanced about 10 per cent of the loans whereas co-operative societies and co-operative banks were the credit agency in 3 per cent cases only. The execut agency 'landlord' though seemingly unimportant in terms of number of loans gave away loans of high values to their tenents.

A glance at the swerage amount per load shows that for obtaining berge loads one had to approach the landlord (Rs. 1402 per load) per the government (Rs. 1319) or the trader (Rs. 984).

- 4. Typelof security. Reparding the security riven for leans the there was practically no difference between "personal security" and 80 per cent of leans were taken sizinst reasonal security or no security. The average value of these leans was borels. 630 to Rs. 670. Novever, either "security by third party" on "liber thange on impossible property" were decanded by the party should before giving big leans (average values Rs. 1416 and Rs. 2033 researched twoly).
- 3. Rate of interest: It was restaning to find that the percentage of interest-free loans was as large as 58. These were mostly small loans (everage value Rs. 528/-) advanced by friends & relatives and traders. Interest rates of Rs. 3.12 to Rs. 6.24 were everged for about 6% loans and Rs. 6.25 to Rs. 9.36 for 4.4% of the loans. These loans were taken, sinky from government and comperative sociation. On the other, hand, 27 per cent of the loans sarried an interest rate of Rs. 9.37 to Rs. 12.49; These had an average value of Rs. 1014; Migher interest rates were a arged for bull 4:4 per tent of the loans.

Fore details of interest rates vis-a-vis different credit areased as can be seen in the Tables, iven in Appendix II. In this connection it may be mentioned that the credit areas has been a percented as friend and relative in some cases because leans given by ther are found to bear interest but according to the leftivition of friend and relative their leans should be interest-free.

Corrodity Loans

4.5 Regarding commodity loans it is found that the remests of households reporting commodity loan was 3,44 and 4.01 only on the two dates 30.6.1978 and 30.8.1978 respectively. The loan value per incent ed household was 3s.,140.36 and 113.80 on these two dates. The decline is due to the fact that the average loan value was as small as As. 50.83 for households taking loan during the reference year 1975-7 Percentage of such households was 1.47.

There were in all 1026 correctty leans outstanding on 30-6-1073 with average loan value being Rs.-153.80. Most of the loans were train

in terms of maize (411), wheat (205), barely (154) and other cereals (154). Rice and rape/h mustard accounted for 51 loans each, By purpose of loan the breakdown was household expenditure (616 loans) and others (410). All these loans were advanced by friends and relatives. Fride Table 17 in Ept. If

Inherited Loans

There it is observed that 1.47 per cent of households reported inherited loans and the arount of inherited loan per reporting household at the time of inheritance was of the order of Rs. 508.33 (principal £s. 463.67, interest Rs. 41.67). Among trees bouseholds 83.37 per cent belonged to the cultivator class and remaining 16.57 per cent belonged to the cultivator class and remaining 16.57 per cent to the production and related workers class. The credit agencies of inherited loans were the government (18.67% reass), comperative society (18.6%) trader (16.67%), friend and relative (33.33%), and others (18.67%).

Dues Receivable by Tribal Fouseholds

Details of receivable dues are given in Tables 3 to 7 in Appendix II. As regards cash dues receivable only 2 per cent of households had rechivable dues of 30-6-1975 with Rs. 21,23 as the amount receivable per household. This percentage rose to 2.21 with Rs. 17.84 ho receivable per household on 30-6-1976. However, the amount receivable varied largely from one occupational group to emother. It was the -highest for the occupation divisions 3, 4 & 5 (clerical, sales and, service workers) being Rs. 224.55 on 30-6-75 and Rs. 179.10 on . 30.6.1976. The corresponding figures for production workers etc. were 46.88 and 31.25 respectively, The cultivator, Kouseholds also gave. loans - to the extent of Rs. 5.67 per cultivator household on 30.6,75 and As. 6.19 on 30 -6-76. For households belonging to fother becametions! the receivable dues was Rev 55;56 per household on both their dates. Receiveble composity dues mas found only, a one few cultivator housefolds, the receivable amount being only Rs. 2.84 per cultivator household. More details of losps and indebted households classified by occupation classes and credit agencies may be seen in tremables given in Appendix II.

SECTION FIVE

SAMPLE PRSIGN AND BETTIATION PROCEDURE.

Sample Design

- 15.1 Broad design: The sample design was a stratified two-store design vith each district as a stratum, villages as first-stage outs and households as second-store units.
- 5 2 Selection of Villages: The list of 1971 census villages was taken as the sampling frame. In each stratum the allotted number of villages were selected with probability proportional, to their census populations and with replacement. For a depopulated village its population was taken as 25 for the purpose of selection.
- 5.3 <u>Hamlet-group selection</u>: Villages with large population were devided into two or more compact, areal sub-divisions (called hamlet-groups) of usarly equal population content. The survey was conducted in one of the sub-divisions selected at random.
- 5.4 <u>Selection of households</u>: All the households of a sample village (or selected harlet-group) were arranged into 5 classes. by type of irrigation of their land and area of cultivated land. From this arranged frame 24 households were sampled circular systematically with equal probability. All the scheduled tribs. households among those selected were surveyed for schedule 8.1,

Estimation Procedure.

5.5 Notations:

- s subscript for ath stratum
- subscript for ith sample village.
- .j. subscript for j.h sample household
- p village population (used for selection)
- . total rural repulation
- n number of selected villages.
- n number of surveyed villages including depopulated villages and zero cases
- D number of hamlet groups in village (D = 1 when the whole village issurveyed)

H: number of scheduled tribe households in the frame

h : number of surveyed scheduled tribe households.

y : value of a characteristic

For the supplement to schedule 3.1, the value of D has been taken as one for those items which relate to the whole village.

5.6 Let Y stand for the estimate of the total of the three concorned districts (area covered by this survey) based on the whole seconds.

(a) Schedule 0,1 and surplement to 3.1

$$\stackrel{\wedge}{H} = \sum_{A} \frac{\stackrel{P}{s}}{\stackrel{m}{s}} \frac{\stackrel{m}{s}}{\stackrel{i=1}{s}} \frac{\stackrel{D}{s}_{i}}{\stackrel{H}{s}_{i}} \cdots \cdots (2)$$

There H_{si} is the total number of scheduled tribe bouseholds in the ith village of sth stratum as per schedule 0.1. The s extends over the three strata (districts) and i over surveyed villages including depopulated villages and zero cases.

It may be mentioned that for estimating the total number of villages belonging to a certain category, the value of y_{si} was taken as one for the villages belonging to the category and zero for other villages.

(b) Schedule 8.1
$$\searrow$$
 \searrow \searrow \searrow y_{sij} (3)

Where hai was the number of surveyed bouseholds in the village of statum. The multiplier M was obtained as Man haber has the total number of surveyed households for schedule 8.1.

The estimate of a ratio of two totals (R + Y/X) was obtained as the ratio of the estimates of those totals i.e $\hat{R} = \hat{Y}/\hat{X}$. For example, the amount of cash loan per indebted household was estimated as the ratio of the estimate of total cash loan and the estimate of total number of households having cash loan.

APPENDIX I

Supplement to Schedule 3.1: Village Schedule for the Indebtedness Enquiry in Himachal Pradesh.
