	<u>CONTENTS</u>	<u>PAGE</u>
Section One	: INTRODUCTION	1 - 5
Section Two	: CONCEPTS AND DEFINITIONS	6 - 7
Section Three	: EXPLANATORY NOTES ON TABLES	8 - 9
Section Four	: SAMPLING DESIGN AND ESTIMATION PROCEDURE	10 - 11
Section Five	: SUMMARY OF FINDINGS	12 - 22
STATEMENT 1R & 1U	: PERCENTAGE DISTRIBUTION OF HOUSEHOLDS OVER THREE BROAD CATEGORIES OF PER CONSUMER UNIT PER DIEM CALORIE INTAKE LEVEL DERIVE (I) ON THE BASIS OF REPORTED CONSUMPTION AND (II) MEAL ADJUSTED CONSUMPTION FOR SELECTED STATES	23 - 26
STATEMENT 2	: PERCENTAGE DISTRIBUTION OF HOUSEHOLDS OVER PER CONSUMER UNIT PER DIEM CALORIE INTAKE LEVEL GROUP BY SUB-SAMPLE	27 - 35
STATEMENT 3 & 3U	: PERCENTAGE OF HOUSEHOLDS (I) REMAINING IN THE SAME LEVEL, (II) MOVING UPWARDS AND (III) MOVING DOWNWARDS THE CALORIE INTAKE LEVEL SCALE AFTER ADJUSTMENT FOR BLCH PER CAPITA PER DIEM CALORIE INTAKE LEVEL GROUP	34 - 51
<u>APPENDIX-A</u>	: <u>LIST OF STATISTICAL TABLES</u> XXXXXXXXXXXXXXXXXXXX	
TABLE 1.1R - 1.17R TABLE 1.1U - 1.17U	: AVERAGE NUMBER OF MEALS CONSUMED IN A HOUSEHOLD FOR ENTERTAINING GUESTS DURING CEREMONIES FOR DISTRIBUTION TO EMPLOYEES (NON-MEMBER) AND THE AVERAGE NUMBER OF MEALS CONSUMED BY HOUSEHOLD MEMBERS AT HOME AND AWAY FROM HOME (FREE OR ON PAYMENT), DURING A PERIOD OF 30 DAYS BY MONTHLY PER CAPITA EXPENDITURE CLASS	A1 - A34
TABLE 2.0R - 2.17R & TABLE 2.0U - 2.17U	: PERCENTAGE (0.00) DISTRIBUTION OF HOUSEHOLDS OVER ADJUSTED PER DIEM PER CONSUMER UNIT CALORIE INTAKE LEVEL BY REPORTED PER DIEM PER CONSUMER UNIT CALORIE INTAKE LEVEL	135 - 142
APPENDIX B	: List of reports based on NSS 38th round consumer expenditure survey published	

THE NATIONAL SAMPLE SURVEY

THIRTYEIGHTH ROUND : JANUARY - DECEMBER, 1983

NUMBER - 356

TABLES WITH NOTES ON THE EFFECT OF
ADJUSTMENT OF ENERGY INTAKE FOR MEALS
CONSUMED FREE AND MEALS SERVED TO OTHERS

Section One

1.1 The National Sample Survey Organisation (NSSO) has been conducting enquiries on Household Consumer Expenditure once in every five years under its ten-year programmes. The third quinquennial survey in the new series on household consumer expenditure was conducted during the 38th round (January 1983 to December 1983). A report on intake of nutrients as estimated from the 38th round consumer expenditure survey data has already been released in Sarvekshana (Vol. XIII No. 2; Oct-Dec '89).

1.2 Apart from the information required for deriving total consumer expenditure for a household with respect to a specific reference period, an auxiliary set of information was also collected in the NSS 38th round on the number of meals taken by the household at home or away from home whether free or on payment and also the number of meals served by the household to its employees and guests whether during ceremonies or otherwise. It is by convention and convenience for data collection that the meals served to guests on any occasion or to the employees are accounted for in the hosts'/employers' households and such meals are obviously not taken into account in the recipients' households to avoid any duplication. Since the intake of nutrients by the household derived from the reported consumption of food does not conform to the actual intake, the purpose of collecting the information on meals (consumed by the household members as also those served to guests and employees) as per procedure mentioned above is

to use it for adjusting the reported consumption of food and hence the reported intake of nutrients to correspond closely to the actual intake. Nevertheless, there are some serious limitations to this adjustment process which are set by the nature and purpose of surveys of household consumer expenditure. The objective of the present report is to study the effect of some obvious and plausible adjustments on the distribution of population over the energy intake levels. This is the first of the series of notes to be brought out on the basis of the tables generated for this purpose.

1.3 Survey period and reporting period : The field work of the 38th round started in January 1983 and continued upto December 1983, covering a period of one complete year. The reference period for collection of data on consumer expenditure was 30 days preceding the date of survey. The estimates presented in the report, therefore, broadly relate to the period December 1982 to December 1983.

1.4 Coverage : The geographical coverage of the survey was the entire Indian Union excluding Ladakh and Kargil districts of Jammu & Kashmir and rural areas of Nagaland.

1.5 Sample Size : The survey covered about 1, 23,000 households spread over 8035 villages and 4379 urban blocks. The number of sample villages or blocks in the rural or urban areas of some states fell far short of the respective numbers allotted. As a result, the sample population was (for those states, unrepresentative and the derived estimates were also appreciably low. Being deficient on this count the results relating to Meghalaya, Sikkim (rural), Tripura and Arunachal Pradesh have not been presented in the report. These are, however, included in the all India estimate.

1.6 Participation of states : In this round all the states and union territories (included in the geographical coverage) except Andaman and Nicobar Islands, Chandigarh, Dadra and Nagar Haveli and Lakshadweep participated in the survey on at least equal matching basis. The results presented in this report are based on central sample data only.

1.7 Method of Adjustment : In the NSS 38th round survey data were collected on the quantity and value of food items consumed by the households during a period of 30 days preceding the date of enquiry in respect of the food items consumed by the households. The quantity estimates of the food items consumed by a household were converted into their equivalent number of calorie by applying appropriate conversion factors. Aggregating the estimates of total calorie for all food items consumed by the household during the period of 30 days preceding the date of enquiry, the required level of calorie intake per diem per consumer unit was derived by dividing the aggregate by the product of 30 and the number of consumer units in the household.

It is to be noted that the average estimate of calorie intake per consumer unit per diem, so derived, may not represent the actual level of intake of a household. There may be members of the household who might have consumed food from their employers (without payment) or as guests of other households. Similarly, persons other than the household members might have been entertained as guests during ceremonies or on any other occasions with food which though not consumed by household members, gets included in the consumer expenditure of the household. While the former is likely to raise the per capita level of calorie intake of the household, the latter will have a tendency to bring it down. Hence, to bring the estimate of calorie intake level closer to actual intake, the following adjustment procedure has been followed. Food reported to be consumed by a household may be broken up into three components viz.,

- (i) meals consumed by the household member in the household as well as those consumed away from home on payment (M_h)
- (ii) meals consumed by guests (M_g),
- (iii) meals consumed by employees (M_e),

All these three components together account for the total reported food consumption. But, this does not include the food received free as guest or as an employee (M_f). With this set of information the derived level of calorie intake per diem per consumer unit for a household (C) was adjusted as (C_a) where,

$$(C_a) = C \times \frac{M_h + M_f}{M_h + M_g + M_e}$$

1.8 Presentation of the results : At the first instance, the quantity of different items of food reported to be consumed by the household were converted into respective calorie values. Aggregating the calorie values of all the food items, the total intake of calorie by all the members of the household during the period of 30 days has been derived. Each individual member of the household was then converted into the corresponding consumer unit on **the basis** of sex and age of the member. Aggregating the consumer unit for all the members the total number of consumer unit of the household was derived. Dividing the total intake of calorie by the product of 30 and the number of consumer units, the per consumer unit per day intake of calorie was derived. The adjusted total calorie intake for the households was obtained by using the adjustment factor prepared in the manner described in the para 1.7 and the adjusted calorie intake per consumer unit per day was also derived. Thus for each household, there were two measures of calorie intake level per consumer unit per diem.

1.9 Contents of the Report : Two **distinct** types of tables in respect of 17 major states and all India separately for rural and urban sectors are presented in Part II. In addition to these tables , the other sections of the report contain (1) Concepts and Definitions (2) Sampling Designs and Estimation Procedure (3) Explanatory Notes on Tables and (4) A Summary of Findings, While the summary tables for all India (rural and urban) are presented in different paras of section five, those for some selected states are provided at the end of that section.

1/ Results for smaller states with low sample size in addition to those mentioned in para 1.5 have not been presented.

Section Two

CONCEPTS AND DEFINITIONS

2.0 The concepts and definitions followed in the consumer expenditure enquiry continue to remain broadly the same as in earlier NSS rounds. Some of these concepts and definitions are explained below.

2.1 Household : A household is a group of persons normally living together and taking food from a common kitchen. A boarding house, a hotel or a hostel is treated as a cluster of households, where each individual boarder (with his dependents or guests) forms a separate household. Households maintained and fed directly by government, such as those in prisons, police quarters, contonments, hospitals, asylums, relief camps are, however, excluded from the scope of the survey.

2.2 Household member : Any person who is a normal resident of the sample household is considered to be a member of the household.

2.3 Consumer unit : Consumer unit according to the age (in years) and sex of a person.

age group (in completed years)	s e x	
	m a l e	f e m a l e
2.0 (1) under 1	(2) 0.43	(3) 0.43
1 - 3	0.54	0.54
4 - 6	0.72	0.72
7 - 9	0.87	0.87
10 - 12	1.03	0.93
13 - 15	0.97	0.80
16 - 19	1.02	0.75
20 - 39	1.00	0.71
40 - 49	0.95	0.68
50 - 59	0.90	0.64
60 - 69	0.80	0.51
70 (+)	0.70	0.50

2.4 Calorie : It is a unit for measuring energy. The calorie unit of measurement of food items is 1000 times the conventional calorie unit of energy. Hence in some studies the unit of energy-nutrient notations like 'Kcal' (i.e. Kilo calorie or 1000 calorie) or simply 'Cal' are used. Throughout this report, however, only 'calorie' has been used to represent the unit of energy for nutrition which is one thousand times of a conventional calorie unit.

2.5 Meal : A meal is composed of one or more readily eatable (generally cooked) items of food with cereal as its usual major constituent. The meals consumed by a person twice or thrice a day provide him/her the required energy and other nutrients for living and for pursuing his/her normal vocations.

2.6 Meal taken away from home-free : The 'meals taken away from home free are (i) those which are provided free by an employer to his employees and (ii) those which are meals taken as guests in other households during ceremonial or other occasions.

2.7 Meal taken away from home - on payment : The meals taken away from home-on payment 'are those which are obtained on payment from hotels/restaurants, eating houses etc., or from office/factory canteens.

GGH

Section Three

EXPLANATORY NOTES ON TABLES

3.1 Table (1) series presented in Part-II shows the detailed results on meals consumed viz., the average number of meals consumed at home, away from home (free of cost or on payment), number of meals served to guests and employees and the average number of meals served to guests during ceremonies and Table (2) shows the percentage distribution of households over adjusted calorie intake level by the reported level of calorie intake.

3.2 Monthly per capita expenditure classes : Results in Table - 1 of Appendix - A are shown by monthly per capita expenditure (Rs.) class. The expenditure class ranges have been arranged in ascending order of their magnitudes as below :

srl. no.	monthly per capita expenditure class (in rupees)	srl. no.	monthly per capita expenditure class (in rupees)
(1)	(2)	(1)	(2)
1.	0 - 30	8.	100 - 125
2.	30 - 40	9.	125 - 150
3.	40 - 50	10.	150 - 200
4.	50 - 60	11.	200 - 250
5.	60 - 70	12.	250 - 300
6.	70 - 85	13.	300 & above
7.	85 - 100	14.	all expenditure classes

3.3 Calorie intake level : Table - 2 of Appendix - A shows the percentage distribution of households over adjusted level of calorie intake per consumer unit per diem. Levels of calorie intake have been expressed as ranges of percentage to the normal requirement of 2700 calorie (per consumer unit per diem) and have been grouped into the following 11 classes :
 (i) less than 25, (ii) 25-50, (iii) 50-70, (iv) 70-80, (v) 80-90, (vi) 90-100, (vii) 100-110, (viii) 110-120, (ix) 120-150, (x) 150-200, (xi) 200 & above.

3.4 Adjusted calorie intake level : For each household the per consumer unit per diem calorie intake has been adjusted by applying the appropriate adjustment factor as explained in Section One, para 1.7. Households have been grouped into calorie intake range as mentioned in para 3.3 considering their respective value of adjusted calorie intake.

Note : The expenditure groups 0-30, 30-40 etc. stand for Rs.0 to to less than Rs.30/-, rupees 30/- to less than Rs.40/-, etc. and so on.

Section Four

SAMPLING DESIGN AND ESTIMATION PROCEDURE

4.0 Broad design : The sampling design adopted in the survey was a stratified two-stage, one with census villages in the rural areas and NSSO urban frame survey blocks in the urban areas as first stage units and households as second stage units. The sample villages were selected with probability proportional to size and with replacement in the form of two independent interpenetrating samples (IPNS). Sample blocks were selected with equal probability also in the form of two IPNS. The sample households in the second stage (ten from each first stage unit) were selected circular systematically after arranging all the households of the first stage units in a specified manner.

4.1 Survey period and sub-round formation : The survey was started in the month of January 1983 and was completed in December 1983. The entire survey period of one year was divided into four sub-rounds, each of three months duration coinciding approximately with the four agricultural seasons. The four sub-round periods were :

sub-round 1	:	January	-	March 1983
sub-round 2	:	April	-	June 1983
sub-round 3	:	July	-	September 1983
sub-round 4	:	October	-	December 1983

The sample units were equally distributed over the four sub-rounds in a manner so as to provide equally valid estimates for each of the related sub-round period. The averages based on the pooled data of all the four sub-rounds would be free from the effect of seasonality.

4.2 Estimation procedure : The estimation procedure adopted in 38th round is based on a weighted sum of the sample values. Denoting by Y the unbiased estimate of Y (the state total of any variate), Y may be expressed as

$$Y = \sum_s \frac{P_s}{n_s} \sum_i \frac{D_{si}}{e_{si} P_{si}} \frac{H_{si}}{h_{si}} \sum_j Y_{sij} \dots\dots (1)$$

for the rural sector ; and

$$Y = \sum_s \frac{N_s}{n_s} \sum_i D_{si} \frac{H_{si}}{h_{si}} \sum_j Y_{sij} \dots\dots (2)$$

For the urban sector. Where,

$s, i,$ and j are suffixes for stratum, village/urban block and household respectively ;

P_s, N_s and n_s give the stratum values of population, number of villages/blocks in the frame and the number of sample villages/blocks respectively;

D_{si}, e_{si}, P_{si} stand respectively for number of hamlet groups/sub-blocks formed, number of census villages contained in a large revenue village actually surveyed and the population of the sample village ;

H_{si} and h_{si} stand for the total number of households listed and the number of sample households ; and finally Y_{sij} is the observed value of the variate for a sample household.

Estimates of the ratio of two characteristics is given by the ratio of the estimates of their aggregates.

Section Five

SUMMARY OF FINDINGS

5.1 Meals consumed by the household and served to guests and employees

Table S1(R) and S1(U) give the average number of meals per household consumed for entertaining the guests during ceremony or at other times, for distribution to the employees (non-members) and also the average number of meals per household consumed by household members at home and away from home (free or on payment) during a period of 30 days by monthly per capita expenditure class for rural all-India and urban all-India respectively. It is seen from the results that in rural India, on an average about 338 meals per household i.e. nearly 60 meals per capita are consumed in a month. As against this, about 13 meals are served by a household to its guests while only 1.6 meals are served to its employees. On the other hand, the number of meals per household whether consumed by the members themselves at home or served to its guests or employees is found to be lower in urban areas than what is correspondingly observed in rural areas at all-India level. Though the number of meals served to employees is in general small, it is relatively higher in the rural areas of Haryana, Jammu and Kashmir, Karnataka, Kerala, Punjab and West Bengal. It is also observed that the average number of meals served to the guests in a month during ceremonies is lower than what is served to them at other occasions. Moreover, ceremonial guests are observed to be more in rural areas than in urban. While 6 such guests are entertained by a rural household on an average during a period of one month, the same is found to be about 3 in urban areas. The reported number of meals consumed by a household free of cost is about 8 in both the sectors. Without any loss of generality, it is expected that at the state level the average number of meals served by the households to guests and employees should be equal to the average number of meals consumed free of cost by them. But belying the expectation, the former is always found to be higher for the rural and urban areas of all the states. It may, therefore, be concluded that, in general, for any reason or other, there is a tendency to under report the number of meals consumed by household members free of cost away from home.

5.2 Meals consumed by monthly per capita expenditure class: The number of meals consumed at home by a person is of the order of 60 on an average in all the per capita expenditure classes in rural and urban areas of India. In the rural areas, the number of meals served to guests and to employees increases with the rise in per capita expenditure level of a household. Correspondingly, the number of meals taken away from home and received free decline with increasing per capita expenditure of the households. That is, a few meals prepared by the households at the higher

expenditure classes partially covers the number of meals served to guests by the high expenditure group of households. In statements 1R and 1U, the average number of meals consumed in a household for entertaining guests during ceremonies, for distribution to employees (non-member) and the average number of meals consumed by household members at home and away from home, during a period of 30 days is shown for each monthly per capita expenditure class separately for all India rural and all India urban.

TABLE S1(R) : AVERAGE NUMBER OF MEALS CONSUMED PER HOUSEHOLD FOR ENTERTAINING GUESTS FOR DISTRIBUTION TO EMPLOYEES (NON-MEMBER) AND THE AVERAGE NUMBER OF MEALS CONSUMED BY HOUSEHOLD MEMBERS AT HOME AND AWAY FROM HOME (FREE OR ON PAYMENT), DURING A PERIOD OF 30 DAYS BY MONTHLY PER CAPITA EXPENDITURE CLASS

sd

5.3 Effect of adjustment of calorie intake on the basis of actual consumption of meals : It has already been observed that the major portion of the meals served to guests is contributed by the relatively affluent class while the recipient households have low per capita expenditure. Compared to the quantum of meals consumed at home, the other components like meals served to guests and employees and meal received free of cost or on payment being relatively small in dimension, their impact in changing the level of per capita intake of energy, is hardly perceptible. Table S2 presents the proportion of households by per capita per diem calorie intake levels of less than 2430, 2430 - 2700 and above 2700, before and after adjustment, by sub-sample for all India rural and urban. Both the sets of results exhibit close sub-sample agreement and the actual estimates are quite close to the corresponding adjusted values. Likewise, summary statements R & U for some selected states which have been presented at the end of this section also exhibit negligible difference between the actual and adjusted calorie intake level. It is therefore, imperative that there is very little impact of adjustment on the overall distribution of the households by levels of calorie intake.

TABLE S2 PERCENTAGE DISTRIBUTION OF HOUSEHOLDS BY PER CONSUMER UNIT PER DIEM CALORIE INTAKE LEVEL WITH AND WITHOUT ADJUSTMENTS BY SUB-SAMPLE

ALL INDIA

sub-sample	per consumer unit per diem calorie intake level					
	unadjusted			adjusted		
	less than 2430 cal.	2430 - 2700 cal	more than 2700 cal	less than 2430 cal	2430 - 2700 cal	more than 2700 cal

2	37.56	12.48	49.96	37.47	12.73	49.80
comb.	37.56	12.40	50.04	37.40	12.77	49.83
<u>u r b a n</u>						
1	44.02	14.24	41.74	43.87	14.13	42.00
2	44.17	14.40	41.43	43.86	14.64	41.50
comb.	43.98	14.37	41.65	43.71	14.58	41.71

5.5 Effect of adjustments at different different calorie intake levels : In Table 84, the percentage of households (i) remaining in the same category, (ii) having a downward shift and (iii) with an upward shift after adjustment for each range of reported calorie intake level are shown. In general, 70 to 90 per cent of the households remained in the same group after adjustment. The proportion was the highest in the "less than 25 per cent" calorie intake level category (93 per cent in rural and 89 per cent in urban). The corresponding proportion was of the order of 69 per cent for both the rural and the urban areas at the level of 200 per cent and above. It is also observed that in the rural areas, under each group below the 90 per cent level, the proportion gaining by adjustment are larger than those moving down after adjustment. This phenomenon is marked only upon the 80 per cent level in the urban areas and at the next higher class (i.e. level of 80 to 90 per cent) the proportion lost is exactly the same as the proportion gained. Upto this point, excepting for the first category the difference between the two groups declines as the level rises. For all the categories above 90 per cent, the picture is reverse that is, the proportion gained is less than the proportion lost and the difference between the two proportions increases with the increasing level of calorie intake.

TABLE S4 : PERCENTAGE OF HOUSEHOLDS (i) REMAINING IN THE SAME LEVEL, (ii) MOVING UPWARDS AND (iii) MOVING DOWNWARDS THE CALORIE INTAKE LEVEL SCALE AFTER ADJUSTMENT, FOR EACH PER CAPITA PER DIEM CALORIE INTAKE LEVEL GROUP

* Percentage to normal requirement of 2700 calorie per consumer unit per diem.

5.6 Effect of adjustment for intake level of below 90 percent and 90 percent & above : Due to adjustment, it is expected that the calorie intake level would show an upward movement for the households reporting to have calorie intake levels less than the norm and would decline for others. Table S5 presents the percentage of households having per consumer unit per diem calorie intake levels of less than 90 percent and 90 per cent or more of normal requirement (grouped by level of calorie intake) moving to the adjacent groups (upwards and downwards), total movement upwards, total movement downwards and the percentage of households which remained in the same group after adjustment for all India rural and urban by sub-sample.

TABLE S5 : PERCENTAGE OF HOUSEHOLDS HAVING PER CONSUMER UNIT PER DIEM CALORIE INTAKS LEVEL OF LESS THAN 90 PERCENT OF REQUIREMENT (GROUPED BY RANGE OF CALORIE INTAKE*) WHICH MOVED TO THE ADJACENT GROUPS (UPWARDS AND DOWNWARDS), TOTAL MOVEMENT UPWARDS, TOTAL MOVEMENT DOWNWARD AND THE PERCENTAGE OF HOUSEHOLDS WHICH REMAINED IN THE SAME GROUP AFTER ADJUSTMENT

6. a l l	44.00	44.16	44.00	56.00	55.84	56.00

*Percentage to normal requirement of 2700 calories per consumer unit per diem

It is seen from the results that below the percent level there are 37.55 percent of the rural households while among them 31.84 percent remained in the same group even after adjustment. While 2.40 percent of them moved one group above and 1.43 percent moved one group below, the total upward movement was registered for 4.13 percent and total downward movement for 1.58 percent of households of that category (households reporting less than 90 percent intake level). Out of the remaining 62.45 percent rural households which reported intake level of 90 percent or more, 48.96 percent had no movement, 7.41 percent moved one group below, 2.86 percent moved one group above. Total downward movement was noted for 9.55 percent and 3.94 percent of households exhibited an upward movement. A similar observation can be made for the urban areas as well.

5.7 Effects of 80 per cent level cut off :

The results similar to those presented in Table S5 are shown in Table S6 for two groups of households taking 80 per cent level of calorie intake as a cut-off point.

It is seen that about one in four households of the rural areas got less than 80 percent of the required calorie energy which 11.83 percent did not receive any movement in movement.

TABLE 36 : PERCENTAGE OF HOUSEHOLDS HAVING PER CONSUMER UNIT PER DIEM CALORIE INTAKE LEVEL OF LESS THAN 80 PERCENT AND MORE THAN 80 PERCENT OF REQUIREMENT (GROUPED BY RANGE OF CALORIE INTAKE*) WHICH MOVED TO THE ADJACENT GROUPS (UPWARD AND DOWNWARD) TOTAL MOVEMENT UPWARD, TOTAL MOVEMENT DOWNWARD AND THE PERCENTAGE OF HOUSEHOLDS WHICH REMAINED IN THE SAME GROUP AFTER ADJUSTMENT

* Percentage to normal requirement of 2700 calories per consumer unit per diem.

Bhaskar/

It is seen that about one in four households of the rural areas got less than 80 percent of the required calorie among which 21.83 percent did not record any movement after adjustment, 0.59 percent moved one group below, 1.65 percent moved one group above and the total movement upwards and downwards was noted for 2.91 percent and 0.63 percent respectively. Downward movement was however more marked among the households above the reported level of calorie intake of 80 percent and more. Though the proportion moving upwards was also high, the proportion of downward movement was much higher than that. In the urban areas nearly 30 percent of the households had a calorie intake level of below 80 percent and the remaining 70 percent belonged to the above 80 percent level. For both the groups of households, the pattern of movement after adjustment of calorie intake is similar to the respective groups of households in the rural areas.

APPENDIX - B

List of reports based on NSS 38th round consumer expenditure survey published

Report No.	<u>Title</u>
319	Report on the third quinquennial survey on consumer expenditure, 38th Round.
332	Pattern of Consumer Expenditure of Scheduled caste and Scheduled tribe households, 38th round.
333	Pattern of Consumer expenditure of households self-employed in agriculture and agricultural and rural labour households, 38th round.
348	Per capita and per consumer unit per diem intake of calorie, protein and fat and perception of the people on adequacy of food, 38th round.
352	Monthly per capita consumption of cereals for various sections of population, 38th round.
353	Level of nutritional intake of population distributed over different expenditure classes, 38th round.
336	Report on Source of Drinking water and energy used for cooking and lighting.
339	Tables with notes on Particulars of Dwelling units, 38th Round.

Revised copy of the NSS Report No. 356

(Tables with notes on the effect of adjustment of energy intake for meals consumed free and meals served to others)
