THE NATIONAL SAMPLE SURVEY

FORTYSECOND ROUND : JULY 1986 - JUNE 1987

NUMBER - 364

MORBIDITY AND UTILISATION OF MEDICAL SERVICES

Section One

INTRODUCTION

1.1 The fortysecond round of the National Sample Survey was devoted to mainly an enquiry on social consumption. The object was essentially to make an assessment of the benefits derived by various sections of the 'society' from public expenditure incurred by the Government, particularly in the areas of education public distribution and health care. With this view, an integrated survey on Maternity, Child Care, Family Planning, Utilisation of Public Distribution System, Education and Utilisation of Medical Services was conducted during July 1986 June 1987. The scope of the present report is to provide the results of the survey on utilisation of medical services.

1.2 In this report results on hospitalisation + hospitalised cases by type of hospital, system of medicine availed of, category of payment, average duration of stay in the hospital and average total expenditure per hospitalised case etc. - are presented. In addition, results on non hospitalised ailments are also presented in this report. The Appendix tables give the detailed results for all-India and the 16 major states. The Summary tables presented, however, give the key results for the remaining states and also the union territory.

1.3 Geographical coverage of the survey : The survey covered the whole of Indian Union except (i) Ladakh and Kargil districts of Jammu & Kashmir and (ii) the rural areas of Nagaland.

Narayan/

1.4 Sample design : The sampling procedure adopted for the survey was, as usual, a two-stage stratified design. The first stage units (fsu) were villages in the rural sector and urban blocks in the urban sector. The second stage units were households in both the sectors.

1.5 Selection of first stage units (fsu's) : The sample villages were selected with probability proportional to population with replacement in the form of two independent interpenetrating sub-samples (IIPNS). The sample blocks were selected by simple random sampling without replacement (SRSWOR), also in the form of two IIPNS's.

1.6 Sampling of households : For the selection of sample households in a village/block, the households were divided into two sub-strata - one containing households with at least one member who had been hospitalised during last 365 days and other containing households with at least one member who had fallen ill or been injured during last 30 days out of the households not included in the first sub-stratum. Then, a sample of 2 households were selected from each sub-stratum circularly systematically with a random start.

1.7 Sample size : The survey was conducted in a sample of 8346 villages and 4568 urban blocks. The statewide number of sample villages and blocks are given for the eighteen selected states and all-India in Statement (1) . The sample sizes for all-India are inclusive of the samples of those states and union territories for which the detailed survey results could not be presented in the report.

Kerala	336	336	144	144
Madhya Pradesh	656	635	312	302
Maharashtra	576	571	552	540
Orissa	368	357	120	120
Punjab	272	265	192	188
Rajasthan	369	367	176	176
Tamil Nadu	480	480	432	431
Tripura	208	158	48	36
Uttar Pradesh	1064	1043	456	452
West Bengal	520	498	352	338
All-India	8546	8346	4656	4560

1.8 Content of the report : The estimation procedure adopted is given in Section Two. The concepts and definitions follow in Section Three. In Section Four, a note on the detailed tables has been presented. Some important summary results are discussed in Section Five. The detailed tables for all-India and 18 states are appended.

Karavan/

Section Two

ESTIMATION PROCEDURE

2.1 Notation : The following notations are used in the sequel :-

S : subscript for state/u.t./region

s : subscript for stratum

i : subscript for sample village/block

j : subscript for sample household

k : subscript for sub-stratum

P : total frame population of stratum in rural sector

p : population of sample village (used for selection)

N : total number of urban blocks in frame in urban stratum

n : number of sample villages/blocks available for tabulation including depopulated and other zero cases in rural/urban stratum (excluding casualty and other not received cases)

D : number of hamlet-groups/sub-blocks formed

c : number of census villages in surveyed revenue village

H : total number of households listed in frame

h : number of sample households available for tabulation

x, y : value of any character

X, Y : aggregate estimate of x, y

R : any ratio of the form Y/X

A cap ($\hat{\ })$ placed over any symbol such as \hat{Y} denotes the estimate obtained from the sample.

2.2 Estimate of aggregates - rural : The formulas for \hat{Y} , the estimate of aggregate of any characteristic y are given below for the rural sector :

$$\hat{Y}_S = \sum_S \frac{P_S}{n_S} \sum_{i=1}^{n_S} \frac{D_{Si}}{C_{Si} \cdot P_{Si}} \sum_{k=1}^2 \frac{H_{SiK}}{h_{SiK}} \sum_j y_{SiKj}$$

The value of H_{Si1} and H_{Si2} i.e., total number of households in the frames of sub-strata 1 and 2 respectively for sch. 25.7.

2.3 Estimate of aggregates - urban : The formulas for \hat{Y} are given below for the urban sector :

$$\hat{Y}_S = \sum_S \frac{N_S}{n_S} \sum_{i=1}^{n_S} D_{Si} \sum_{k=1}^2 \frac{H_{SiK}}{h_{SiK}} \sum_{j=1}^{h_{SiK}} y_{SiKj} .$$

2.4 Estimate of ratios : The estimate of a ratio of the form $R = Y/X$ is given by $\hat{R} = \hat{Y}/\hat{X}$

Where Y and X are obtained by using the formulas already given at the level at which \hat{R} is required.

Narayan

Section Three

CONCEPTS AND DEFINITIONS

3.1 Illness/injury : Any deviation from the state of normal physical and mental well-being is considered as illness. Injury covers all types of damage to any part of the body such as cuts, wounds, haemorrhages, fractures, burns etc. caused by accidents including bites.

3.2 Hospitalisation : A person is considered as hospitalised if she/he has availed of medical services as an indoor patient in any medical institution. However, hospitalisation of females members for the purpose of child birth was not considered as hospitalisation for the referred survey.

3.3 Adult education classes : Adult education class relates to the highest education - level among those attained by the adult members of the household.

3.4 Average total expenditure : The average total expenditure per hospitalised case/person hospitalised is the ratio of the total expenditure for hospital treatment to total number of hospitalised cases/persons hospitalised reporting payment.

3.5 Proportion of person with ailments : Ailments, which prevailed for any length of time during the reference period of 30 days preceding the date of survey have been considered for this enquiry. However, the ailments which were not treated as an in-patient in a hospital have only been considered for working out the proportion of persons with ailments. The proportion of persons with ailments is given by the ratio of the persons with ailments, observed during the reference period of 30 days preceding the date of survey, to the total number of persons.

Section Four

NOTE ON DETAILED TABLES

4.1 Fractile group . It has been stated earlier that other than the survey on utilisation of medical services, survey in the area of education was conducted. The Schedule 25.2 was canvassed to ^{collect information on participation in} Education. The sampling frame for schedule 25.2 constituted whole of the population in India. On the other hand, the sampling frame for schedule 25.7 for collecting of information on utilisation of medical services, under consideration of this report, is a truncated one representing part of the population in India. In order to study the results of the survey on utilisation of medical services by fractile groups which should represent whole of the population, the limiting per capita expenditure of the fractile groups for schedule 25.2 were treated as the upper limits of the fractile groups for schedule 25.7 and accordingly, fractile groups for schedule 25.7 were formed.

4.2 The percentage distribution of characteristics may not agree absolutely in all the tables. The characteristics, on which the different tables have been generated, were missing in the records of the sample events in a few cases and hence, such records were kept aside of the tabulation in that table.

Narayan/

ection Five

SUMMARY OF FINDINGS

42nd round survey on utilisation of medical services was carried out in a sample 8346 villages and 456 blocks all over India. The survey results show that on an average about 149 lakh persons were hospitalised in the rural and lakh in the urban India in a period of 365 days from Jul 1986 - June 1987. The male - female ratio among the hospitalised persons was about 56 : both rural and urban sectors. The number of hospitalised cases per person hospitalised were observed to be 1.07 and respectively the rural and urban India. The prevalence rate of hospitalisation, and per 1000 persons respectively for rural and urban sector, indicates a lower order of hospitalisation in the urban sector compared to the rural.

5.2 Hospitalised cases by type of hospitals - The percentage distribution of hospitalised cases over type of hospital are as follows:

Category	Percentage
Rural Sector	55% in public hospitals, 32% in private hospitals
Urban Sector	60% in public hospitals, 30% in private hospitals

It is observed that proportion of hospitalised cases treated by primary health centres was only about 1 per cent in the urban sector as against about 4 per cent in the rural sector. The preference of getting treated as an inpatient in a public hospital over the other types of hospitals is observed in all the states and union territories except in few states, like Andhra Pradesh, rural Kerala, Maharashtra and rural Punjab where private hospitals were preferred to public hospitals for treatment.

5.3 Hospitalised cases by type of wards used - The percentage distribution of hospitalised cases by type of ward is given in Statement (3). While about 61 per cent of the hospitalised cases in the rural India were treated in free wards about 32 per cent

cases got treated in paying general wards and 7 per cent in paying special wards. The percentages of hospitalised cases treated in the corresponding types of wards were observed to be 55, 32 and 13 respectively in urban India. This observed all India pattern of the use of wards by the hospitalised cases could also be seen for all states and union territories except for Andhra Pradesh, Gujarat, Maharashtra, urban - Meghalaya and rural - Punjab. In these states and sectors, the percentage of hospitalised cases in the paying general wards are observed to be higher than those in the other types of wards.

5.4 System of medicine used : The percentage distribution of hospitalised cases over the system of medicine used during hospitalisation are given in Statements 4R & 4U respectively for the rural and urban sectors of each state and all-India. Results reveal that allopathic system of medicine was used in < over 98 per cent of the hospitalised cases in both rural and urban India. The percentages of hospitalised cases reported to have used allopathic system of medicine were lowest in the rural (88 percent) and urban (90 per cent) sectors of Manipur. The homeopathic system of medicine had been used ^{only} in a few cases of hospitalisation. For rural areas, the percentage is observed to be highest in Pondicherry and Manipur (4) and for urban areas in Mizoram (5) followed by Tripura and Manipur (1).

5.5 Hospitalised cases and payment category : Statement (5) gives the percentage distribution of hospitalised cases by payment category. At the all India level, the percentage of hospitalised cases under the 'no payment' and 'employers medical welfare scheme' payment categories are observed to be 23 and 6 . respectively in the rural sector as against the 20 and 13 respectively in the urban sector. The disparity ~~in the distribution~~ over the states and union territories is

observed to be very high in the distribution of hospitalised cases by payment category in both the rural and urban sectors. The percentage of hospitalised cases where no payment was made for the hospital treatment is observed to be very high in the rural sectors of Andaman & Nicobar Islands (77), Tripura (73), Pondicherry (71) and Jammu & Kashmir (70) and in the urban sectors of Lakshadweep (78), Tripura (73), Andaman & Nicobar Islands (71). On the other hand, the percentage of hospitalised cases with no payment is as low as 2, 3 and respectively in the rural sectors of Haryana, Punjab and Uttar Pradesh, and 1, 6, and 6 respectively in the urban sectors of Punjab, Gujarat and Uttar Pradesh. In Haryana the number of such cases is practically nil.

5.6 Payment made to the hospital : The payment made to hospital per hospitalised case for government and private hospitals are given in Statement (6). A wide variation in the average amount of payment made to the Government and Private hospitals is observed in both the rural and urban sectors of states and union territories. In the rural sector, the variation is from Rs. 5117 (Delhi) to Rs. 28 (Tripura) as against Rs. 1667 (Goa, Daman & Diu) to Rs. 127 (Mizoram) in the urban sector. ~~Obviously~~ Obviously the average amount of payment made to the government hospital is much lower compared to the payment made to private hospital. At the all-India level, while the average amount of payment made to the government hospital was only Rs. 320 per case, it was as high as Rs. 73 for private hospital in the rural sector. The corresponding amount of payments were Rs. 385 and Rs. 1206 respectively in the urban sector. The pattern is observed for all the states except urban Himachal Pradesh.

5.7 Average number of days stayed in the hospital per hospitalised case : In Statements 7R & 7U, the average number of days stayed in the hospital per hospitalised case are given for rural and urban sectors of each state and all-India. It

observed that the average number of days stayed in government hospitals is more than that in private hospitals for both the rural and urban sectors of India. Further, the number of days stayed in "paying special ward" per hospitalised case is observed to be higher than that in "free ward" and 'paying general ward' in the rural sector. But in urban sector, it is comparatively higher in the 'free ward' of the hospital. This observed phenomena at the all-India level is not uniformly reflected over the rural and urban sectors of the different states and union territories.

5.8 Average total expenditure per hospitalised case : The average expenditure per hospitalised case by type of ward separately for government hospitals and private hospitals is presented for the different states and all-India in statements 8R for rural areas and 8U for urban areas. It is observed that the average expenditure incurred per hospitalised case vary considerably according to the type of ward used and also over the states.

5.9 Average number of days stayed and average total expenditure per hospitalised person : From statement (9), it is seen that the average number of days stayed in the hospital per hospitalised person is almost 16 and 15 days respectively in rural and urban India. The average total expenditure is found to be Rs. 953 in rural areas as against Rs. 1193 in urban India. At the state level, the average expenditure is found to be the highest in rural Delhi (Rs. 2053) followed by urban Uttar Pradesh (Rs. 1821).

5.10 Proportion of persons with ailments : The morbidity rate, that is the number of persons who had fallen ill on an average

in a period of 30 days during 1986-87 per 1000 persons are presented in statement (10). It is revealed that the proportion of ailing persons in the rural sector was higher than that in the urban sector of India. It was 63 to 64 per 1000 persons among the rural males and females as compared to the rates of 30 to 33 among the urban males and females. The morbidity rates among both the males and females are observed to be almost same over the different fractile groups of population.

5.11 Proportion of persons with ailments treated and monthly household per capita expenditure : The proportion (per 100000) of persons with ailments treated (not as an inpatient in a hospital) to total persons with ailments are given in statement (11). The proportion of persons with ailments treated is found to be higher among males than females in the bottom expenditure groups. Whereas a reverse pattern is observed in the higher expenditure groups. Also, the proportions are higher in the urban sector compared to the rural sector.

5.12 Proportions of persons with ailments treated and adult education : Results given in statement (12), indicate a positive association between adult education standard and proportion of persons with ailments treated. The proportion is found to be higher among those with higher level of adult education. Also, the proportions are higher among males compared to females and also higher in the urban sector than in the rural sector.

5.13 Source of treatment : Percentage distribution of treatments over source of treatment is given in Statements 13R & 13U for the rural and urban sectors respectively. In rural India about 53 per cent of treatments were availed of from private doctors. Public hospitals accounted 13 per cent and private

Hospitals 15 per cent. The corresponding percentages were 6, 23 and 16 respectively in urban India. These proportions are found to be highly varying from one state to another.

5.14 - System of medicine : The percentage distribution of treatments over system of medicine is presented for rural and urban areas in statements 14R & 14U respectively. It is seen that most of the ailing persons go for allopathic system of medicine for their treatment. At all India level this system of medicine was used in 96 percent of treatments in both the rural and urban areas. This preference for allopathic system of medicine for treatment of ailments could also be observed in the rural and urban sectors of all the states and union territories.

5.15 Type of payment for treatment : It is observed from statements 15R & 15U that in rural India 49 per cent of the treatments for ailments were without payment. In the urban sector, the corresponding percentage is 42. Of the treatments reporting payment to some institution, the percentage of treatments received from private institutions is higher compared to the government institutions.

5.16 Average duration of treated sickness and average total expenditure per treatment : Average duration of treated cases of sickness and average total expenditure per treatment are given in statement 16. The average duration of sickness treated from government institutions was about 11 to 13 days for both the rural and urban areas at all-India level whereas, the average duration of sickness treated from private institutions was 12 days in rural and urban areas.

STATEMENT 14R : PERCENTAGE DISTRIBUTION OF TREATMENTS (NOT AS AN ILLPATIENT IN A HOSPITAL) OVER SYSTEMS OF MEDICINE FOR EACH STATE/U.T.

5.17:- Untreated sickness and reason for taking no treatment :
The percentage distributions of untreated sickness by reason for taking no treatment, given in statement 17B & 17D, reveal that in rural India in about 75 per cent of the cases of untreated sickness, they were not treated as the ailments were not considered serious. In about 15 per cent of the cases, the reason was financial difficulties. The corresponding figures for urban India were 81 and 10 per cent respectively. In the rural sectors of Jammu & Kashmir, Orissa and Rajasthan and both in the rural and urban sectors of Goa, Daman & Diu financial difficulties was reported major cause for taking no treatment. In rural India, of the untreated sickness, in about 3 per cent of the cases the reported reason was "no medical facility". Percentage of such cases was highest in the state of Himachal Pradesh (14) followed by Sikkim (10) and Rajasthan (9). In urban India this reason was cited only in less than 1 per cent of the cases. The proportion of untreated sickness due to non availability of medical facilities was as high as 9 per cent in urban Meghalay.

STATEMENT 17R : PERCENTAGE DISTRIBUTION OF UNREATED STALLS OF SICKNESS
OVER REASON FOR TAKING NO TREATMENT FOR EACH STATE/U.T.

LIST OF DETAILED TABLES

AND DETAILED TABLES

table no.	title	page no. (s)
(1)	(2)	(3)
1R	Estimated number of hospitalised persons by sex and fractile groups for selected states : rural	A1 - A3
1U	Estimated number of hospitalised persons by sex and fractile groups for selected states : urban	A4 - A6
2.00 -		
2.18	Percentage distribution of hospitalised cases over fractile groups, social groups and adult education classes by type of hospital and type of ward for rural and urban sectors of selected states	A7 - A132
3.00 -		
3.18	Percentage distribution of hospitalised cases over fractile groups by system of medicine for rural and urban sector of selected states	A133 - A151
4.00 -		
4.18	Percentage distribution of hospitalised cases over type of hospital into payment types by type of medical services for rural and urban sectors of selected states	A152 - A170
5.00 -		
5.18	Percentage distribution of hospitalised cases over fractile groups by payment category and average amount of payment made to hospital by fractile group and type of hospital for rural and urban sectors of selected states	A171 - A189

table no.	title	page no.
(1)	(2)	(3)
6.00		
6.18	Average number of days stayed in the hospital and average total expenditure per hospitalised case by fractile group, type of hospital and type of ward for rural and urban sectors of selected states	A190 - A208
7R	Proportion (per 1,00,000) of persons with ailments treated (not as an inpatient of hospital) to total persons with ailments by sex and fractile groups for selected states rural	A209 - A211
7U	Proportion (per 1,00,000) of persons with ailments treated (not as an inpatient of hospital) to total persons with ailments by sex and fractile groups for selected states : urban	A212 - A214
8.00		
8.18	Percentage distribution of treatments (not as an inpatient in a hospital) over fractile groups by source of treatment for rural and urban sectors of selected states	A215 - A233
9.00		
9.18	Percentage distribution of treatments (not as an inpatient in a hospital) over fractile groups by system of medicine for rural and urban sectors of selected states	A234 - A252

table no.	title	page no.
(1)	(2)	(3)
10.00 -		
10.18	Percentage distribution of treatments (not as an inpatient in a hospital) over sources of treatment by type of medical services and type of payment for rural and urban sectors of selected states	A253 - A271
11.00 -		
11.18	Percentage distribution of treatments (not as an inpatient in a hospital) over fractile groups by payment category and average amount of payment made to source of treatment by fractile groups and source of treatment for rural and urban sectors of selected states.	A272 - A290
12.00 -		
12.18	Percentage distribution of untreated spells of sickness over fractile groups, social groups and adult education classes by reason for no treatment for rural and urban sectors of selected states	A291 - A327

Note : In tables 2.00 to 2.18 & 12.00 to 12.18, the differences between 100 and sum of the individual items in a column indicate the percentage of 'not recorded' cases
