ACKNOWLEDGEMENT

1. The report has been finalized by M. Das. M. S. Murty, M. T. Baby and P. C. Kundu were associated in the work relating to the preparation of the report.

2. Supervision of computing, punching and machine tabulation was entrusted to H. B. Chowdhury, S. S. Bose, A. K. Chowdhury and S. Palit; R. Roy and S. N. Das; and K. C. Poddar, B. B. Chakravorty, F. M. Rao and B. L. Banerjee respectively.

3. The design of the survey was prepared by the Indian Statistical Institute.

4. The primary data were collected by the Directorate of the National Sample Survey, Government of India in all the States except West Bengal and Bombay city in Maharashtra State where the Indian Statistical Institute collected the relevant data.

THE NATIONAL SAMPLE SURVEY

Eighteenth Round : February 1963—January 1964

NUMBER 142

*This report entitled 'Tables with Notes on Consumer Expenditure, Eighteenth Round : February 1963—January 1964' was prepared by the Indian Statistical Institute, Calcutta. The views contained in the report are not necessarily those of the Government of India.**

INTRODUCTION

1.1 The data on household consumer expenditure are being collected in each round of the National Sample Survey beginning from the first round which started in October 1950. The tables presented in this report have been prepared from the data collected during the eighteenth round of the survey. The tables have been generated from block number 17 (summary of expenditure by selected items) of schedule 1.0. The scope of information is thus limited only to thirteen broad groups¹ of items of consumption.

1.2 The field work of 18th round started in February 1963 and continued up to January 1964 covering a period of one complete year. The reference period for collection of data on consumer expenditure was 30 days preceding the date of enquiry. The estimates presented in the report, therefore, broadly relate to the period January 1963 to January 1964.

1.3 The geographical coverage of the survey was the entire Indian Union excluding the Andaman and Nicobar Islands, islands of Amindivi, Minicoy and Laccadive, the North East Frontier Agency, Mao, Ukhrul and Tamenlong sub-division of Manipur, the Ladakh district of Jammu & Kashmir and the Union Territories of Goa, Daman and Diu and Pondicherry. Information was collected by interviewing one of the members (usually the head) of the sample households. Altogether 21776 sample households from 8472 sample villages in the rural areas and 4296 sample households from 4572 sample blocks in the urban areas (including 601 sample households from 676 sample blocks in the four big cities of Bombay, Calcutta, Delhi and Madras) were surveyed in this round. The estimates in all tables are given by a pair of independent and interpenetrating party-wise sub-samples. In addition, for some selected items, estimates by all the 4 sub-samples have been given. The usual technique of interpenetrating net-work of samples (IPNS) had been employed both at the collection and tabulation stages.

1.4 The responsibility for field work rested with the Directorate of National Sample Survey in all States and Union Territories except in West Bengal and Bombay city, where the collection of data was done by the field staff of the Indian Statistical Institute.

1.5 All the states except West Bengal participated in the work of the survey. Except Mysore which participated on a half-matching basis, all the states participated on a full-matching basis. (States which conducted the survey with a sample size equal to that of the central sample are considered as having participated on full-matching basis.) The collection of data for the state sample was the responsibility of the state concerned.

1.6 A broad outline of the sampling design and the method of estimation is given in Appendix I. A facsimile of the schedule of enquiry is given in Appendix II. The estimates presented in this report are based on the central sample only.

¹Details given in para 3.2.

*The draft report (No. D. 166) was submitted to the Government of India in April 1967.

CONCEPTS AND DEFINITIONS

2.1 The concepts and definitions as followed in the consumer expenditure enquiry continued to remain the same as in earlier rounds. Some of the basic concepts and definitions are explained below.

2.2 *Household* : A household is a group of persons usually living together and taking principal meals from a common kitchen. A boarding house, a hotel or a hostel is treated as a cluster of households, where each individual boarder (with his dependents or guests) forms a separate household. Households maintained and fed directly by government such as those in prisons, police quarters, cantonments, hospitals, asylums and relief camps are, however, excluded from the scope of the survey.

2.3 *Household member* : Any person who takes principal meals with the household for at least 16 days during a period of 30 days preceding the date of enquiry is considered to be a member of the household. Such a person may be the head of household, or a relation or protegee of the head, or an employee or a guest of the household.

2.4 *Household size* : The number of members (as defined above) in a household gives the household size.

2.5 *Household Consumer Expenditure* : Consumer expenditure comprises all expenditure incurred by the household during the reference period (30 days preceding the date of survey) exclusively towards its non-productive purposes. Thus all expenses towards the enterprise activities of the household are excluded. While consumption by the pet animals of the household is included in the household consumption, the consumption by the livestock of the household is excluded as it is a part of the enterprise expenses of the household. The concept of consumption is not uniform for all items in the schedule. For items belonging to the category of food, intoxicants and fuel and light (blocks 10-13 of the schedule), consumption implies actual amount consumed (irrespective of the amount purchased in cash or kind) during the reference period. For clothing items (block 14), consumption implies maiden use only. So far as the items of blocks 10-14 are concerned, consumption out of transfer receipts in kind like receipt of loans, gifts, charities, free collections etc. is included in the household consumption, while transfer payments in kind like loans (advanced or repaid), gifts, charities etc. are excluded from the scope of household consumption. Consumption of goods purchased in cash is evaluated at the actual purchase price irrespective of the period of purchase, that of goods produced by the household, at the ex-farm or ex-factory price and that of goods received by barter exchange or by transfer receipts, at the average retail price prevailing in the locality of the sample household during the reference period. In case of items like miscellaneous goods and services, consumer rents and taxes (block 15) and durable goods (block 16), there is no separate concept of purchase and consumption as in the case of items of blocks 10-14. The actual expenditure incurred (in cash or kind) on an item of consumption during the reference period towards its purchase, construction, maintenance, repair or use for non-productive purposes is considered to be the consumer expenditure on that item. Expenditure towards purchase of land and building or construction of building for residential purposes is excluded from the household consumer expenditure as it is considered as an expenditure towards capital formation of the household, but expenditure towards repair and maintenance of residential houses is included. Second-hand purchases are, however, excluded from the scope of current consumer expenditure.

EXPLANATORY NOTES ON TABLES

3.1 The tables according to the nature of information they supply, are grouped in the following way.

- (i) tables showing the distribution of sample households,
- (ii) tables showing the percentage distribution of estimated number of households and persons,
- (iii) tables showing the average number of persons per household,
- (iv) tables showing the consumer expenditure in rupees per person for a period of 30 days by items of consumption and by monthly per capita expenditure classes.

3.2 The items of consumption have been merged into 10 major groups. The ten major groups are (1) cereals, (2) cereals and cereal substitutes, (3) pulses, (4) milk and milk products, (5) other food items, (6) clothing, (7) fuel and light, (8) rent, (9) taxes and (10) other non-food items. The tables also provide for additional lines relating to (i) all food items, (ii) all non-food items and (iii) all items.

3.3 The groups of items of consumption, as presented in the tables are defined here in terms of their constituents.

- (a) *cereals* : rice, wheat, jowar, bajra, maize, barley, small millets, ragi, Bengal gram and their products.
- (b) *cereals and cereal substitutes* : cereal and cereal substitutes like tapioca, pea etc.
- (c) *pulses* : arhar, tur, gram, moong, masoor, urd, khesari, pea and other pulses and their products.
- (d) *milk and milk products* : liquid milk (cow, buffalo, goat and others); milk (condensed, powder etc.); ghee (cow and buffalo); butter, dahi, ghol, lassi and other milk products.
- (e) *other food items* : oil, oil seeds and products, vegetables; fruits and nuts; meat, egg and fish; sugar; salt; spices; beverages, refreshments and processed food; pickles, jam and jellies.
- (f) *clothing* : all items of clothing—cotton (mill made, hand-loom and khaddar), silk, rayon etc. and woollen including items of bedding and upholstery.
- (g) *fuel and light* : coke, coal, firewood, electricity, gas, dungcake, charcoal, kerosene, candle, matches and other fuel and lighting oil.
- (h) *rents* : rents on residential house, residential land and other consumer goods. No imputation of rent for residential houses owned by the sample household was made.
- (i) *taxes* : consumer taxes like road cess, chowkidari taxes, municipal rates, consumer licence fees and other local rates. Income tax or taxes relating to household enterprise are excluded.
- (j) *other non-food items* : pan etc., tobacco and products, drugs and intoxicants, amusements and sports, education, medicine, toilets, sundry goods, consumer services, conveyance, ceremonials, furniture, musical instruments, ornaments, domestic utensils, footwear and other durable or semi-durable goods and their repairing expenses including the maintenance of residential houses.

3.4 Separate tables have been provided for each of the State and all-India for both the rural and urban sectors; and for each of the four big cities of Bombay, Calcutta, Delhi and Madras and all these cities pooled.

3.5 The estimates in all the tables of the report have been given by party-wise sub-samples and by the combined sample (indicated by s. 1, s. 2 and comb.) Sub-samples 1 and 3 gave party 1 sample and sub-samples 2 and 4, party 2. In addition estimates in tables 1.7.0, 2.7.0 and 3.7.0 have been given by all the 4 sub-samples indicated by ss. 1, ss. 2 etc. Estimates have been given also by breakdown of monthly per capita expenditure classes in rupees, arranged in ascending order of magnitude. The expenditure levels are grouped into 13 classes as follows.

| sl. no. | monthly per capita expenditure classes in rupees | sl. no. | monthly per capita expenditure classes in rupees |
|---------|--|---------|--|
| (1) | (2) | (1) | (2) |
| 1 | 0—8 | 7 | 21—24 |
| 2 | 8—11 | 8 | 24—28 |
| 3 | 11—13 | 9 | 28—34 |
| 4 | 13—15 | 10 | 34—43 |
| 5 | 15—18 | 11 | 43—55 |
| 6 | 18—21 | 12 | 55—75 |
| | | 13 | 75 & above. |

The groups 0-8, 8-11 etc. stand for 0- less than 8, 8- less 11 and so on. Estimates for all classes pooled together are also presented.

3.6 It may be noted that estimates in some of the tables are based on a very small number of sample households. In such cases, the estimates should be used with sufficient caution.

3.7 Figures in the tables are given in two decimal places. When an estimate is too small to be represented in two decimal places, it has been shown as 0.00 whereas for non-reporting items, the estimate has been indicated by the sign '-'.
3.1 The tables according to the nature of information they supply are grouped as follows:

3.8 The following system has been adopted in numbering the tables. The left handmost digits stand for the sector to which the tables belong, *i. e.*, 1 for rural, 2 for urban and 3 for cities (four big cities only). The digits following the first point from left stand for the nature of information. The digits following the second point refer to individual State or city.
(ii) Tables showing the average number of persons per household.
 (iv) Tables showing the consumer expenditure in rupees per person for a period of 30 days by items of consumption and by monthly per capita expenditure classes.

3.2 The items of consumption have been grouped into 10 major groups. The ten major groups are (1) cereals and cereal substitutes, (2) pulses, (3) milk and milk products, (4) other food items, (5) fats and oils, (6) sugar, (7) meat and fish, (8) other non-food items, (9) all non-food items, (10) all non-food items and (11) all non-food items.

3.3 The groups of items of consumption, as presented in the tables are defined here in terms of their consumption.

(a) Cereals: rice, wheat, jowar, maize, bajra, millets, ragi, Bengal gram and their products.

(b) Pulses and cereal substitutes: lentils, chickpeas, etc.

(c) Milk and milk products: liquid milk (cow, buffalo, goat and others); milk (condensed, powdered, etc.); ghee (cow and buffalo); butter, ghee, and other milk products.

(d) Other food items: oil, oil seeds and products, vegetable oils and fats; meat, fish and shellfish; salt; spices; beverages, refreshments and processed foods; pickles, jam and jellies.

(e) Cloth: all items of clothing—cotton, wool, silk, hand-made and machine-made, etc. and woollen including items of bedding and upholstery.

(f) Fuel and light: coal, wood, kerosene, electricity, gas, etc.; and other fuel and lighting oil.

(g) Rent: rent on residential houses, residential land and other residential premises. No imputation of rent for residential houses owned by the sample households was made.

(h) Taxes: consumer taxes like road tax, electricity tax, municipal taxes, etc. and other taxes. Income tax or taxes relating to household activities are excluded.

(i) Other non-food items: paper, etc., tobacco and products, drugs and medicinal preparations, and other items like furniture, books, etc. and other non-food items.

(j) All non-food items: including the expenditure on all non-food items.

3.4 Separate tables have been provided for each of the States and all India for both the rural and urban areas, and for each of the four big cities in Bombay, Calcutta, Delhi and Madras and all other cities.

3.5 The estimates in all the tables of the report have been given by party-wise sub-groups and by the combined sample (indicated by a, 1, 2 and combined). Sub-groups 1 and 2 have been given by all the 4 sub-groups indicated by a, 1, 2 etc. Estimates have been given also by towns and of monthly per capita consumption class in rupees arranged in ascending order of magnitude. The expenditure levels are grouped into 13 classes as follows.

13 classes as follows.

| Monthly per capita expenditure class in rupees | No. | Monthly per capita expenditure class in rupees | No. |
|--|-----|--|-----|
| 0-8 | 1 | 31-34 | 7 |
| 8-11 | 2 | 34-38 | 8 |
| 11-14 | 3 | 38-41 | 9 |
| 14-18 | 4 | 41-44 | 10 |
| 18-21 | 5 | 44-48 | 11 |
| 21-24 | 6 | 48-52 | 12 |
| | | 52-55 | 13 |
| | | 55 & above | 13 |

The groups 0-8, 8-11 etc. stand for 0-less than 8, 8-less than 11 and so on. Estimates for all classes pooled together are also provided.

SUMMARY OF FINDINGS

4.1 The detailed results of the survey can be obtained from the tables of the report which have been presented by sub-samples. Some of the main findings of consumer expenditure are, however, summarised below considering the estimates of the combined sample only.

TABLE (A) : Percentage distribution of estimated number of households and persons and average household size by monthly per capita expenditure classes and by sectors : all India.

| monthly per capita expenditure classes | number of sample households | | | average house hold size | | | percentage of | | | | | |
|--|-----------------------------|-------|------|-------------------------|-------|------|---------------|--------|--------|------------|--------|--------|
| | | | | | | | persons | | | households | | |
| | rural | urban | city | rural | urban | city | rural | urban | city | rural | urban | city |
| (1) | (2) | (3) | (4) | (5) | (6) | (7) | (8) | (9) | (10) | (11) | (12) | (13) |
| 0-8 | 574 | 31 | .. | 5.98 | 6.96 | .. | 3.28 | 1.14 | .. | 2.83 | 0.75 | .. |
| 8-11 | 1705 | 91 | .. | 5.73 | 6.52 | .. | 9.42 | 3.34 | .. | 8.47 | 2.35 | .. |
| 11-13 | 1669 | 150 | 1 | 5.68 | 6.40 | 4.00 | 8.82 | 5.14 | 0.19 | 8.00 | 3.69 | 0.18 |
| 13-15 | 2035 | 216 | 18 | 5.52 | 5.82 | 5.36 | 10.44 | 6.78 | 4.61 | 9.73 | 5.35 | 3.30 |
| 15-18 | 3035 | 352 | 14 | 5.45 | 5.74 | 6.38 | 14.86 | 10.78 | 3.61 | 14.03 | 8.63 | 2.17 |
| 18-21 | 2678 | 364 | 13 | 5.26 | 5.36 | 6.86 | 12.48 | 10.25 | 4.09 | 12.21 | 8.79 | 2.29 |
| 21-24 | 2240 | 363 | 23 | 5.21 | 5.53 | 5.88 | 10.22 | 10.49 | 5.91 | 10.09 | 8.72 | 3.86 |
| 24-28 | 2183 | 399 | 39 | 4.86 | 5.21 | 5.66 | 9.20 | 10.77 | 9.75 | 9.74 | 9.50 | 6.61 |
| 28-34 | 2132 | 482 | 55 | 4.78 | 4.70 | 4.82 | 8.80 | 11.55 | 11.99 | 9.46 | 11.27 | 9.55 |
| 34-43 | 1569 | 513 | 88 | 4.41 | 3.87 | 3.72 | 5.87 | 9.68 | 14.14 | 6.84 | 11.50 | 14.60 |
| 43-55 | 1018 | 444 | 91 | 4.25 | 3.31 | 2.96 | 3.67 | 7.25 | 11.77 | 4.45 | 10.07 | 15.25 |
| 55-75 | 566 | 428 | 122 | 3.62 | 3.27 | 3.09 | 1.73 | 6.75 | 16.06 | 2.46 | 9.48 | 19.91 |
| 75 & above | 372 | 463 | 137 | 3.69 | 2.82 | 3.08 | 1.21 | 6.08 | 17.88 | 1.69 | 9.90 | 22.28 |
| all classes | 21776 | 4296 | 601 | 5.15 | 4.59 | 3.84 | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 | 100.00 |

4.2 *Household size* : Referring to table (A) above in which percentage distribution of households and persons and average household size have been shown by monthly per capita expenditure levels for the rural, urban and city sectors (only four big cities of Bombay, Calcutta, Delhi and Madras), it may be observed that, in general, the average household size decreases with the rise in expenditure levels. This is as much true for the rural sector as for the urban sector with the single exception in the expenditure classes 75 & above in the rural sector and 21-24 in the urban sector. For the cities, however, the trend is different. The household size first increases with the rise in expenditure level and then falls from the expenditure class 18-21, it being roughly the same in the last three expenditure classes.

The average number of persons for the country as a whole is 5.15 per rural household and 4.59 per urban household. The highest household size 5.98 and 6.96 are reported by the lowest expenditure class 0-8 and lowest 3.62 and 2.82 by the penultimate (55-75) and the ultimate (75 & above) expenditure classes respectively in the rural and urban areas. The average household size for all cities pooled is 3.84.

4.3 *Population* : The distribution of persons in the different expenditure classes in the three sectors is quite different. The proportion of persons in the rural sector rises to a certain level of expenditure after which it shows a downward trend. For instance, the proportion of persons in the lowest class is 3.28%. The increase from this to the next expenditure class is very considerable (9.42%) after which the rise in proportion is slow till we reach expenditure class 15-18 (14.87%) whereafter it falls slowly upto class 28-34 and sharply afterwards, the highest class reporting 1.21% of population. A large bulk of the rural population (84.24%) is concentrated between the expenditure classes 8-11 and 28-34 both included.

As we pass from the lowest expenditure class to the highest expenditure class in the urban sector, the proportion of persons at first rises, then becomes steady and then falls slowly. For example, the percentage of population rises from 1.14 in the lowest class to 10.78 in the expenditure class 15-18 whereafter it is steady upto class 28-34 and falls afterwards. A large bulk of the urban population (63.52%) is concentrated in the expenditure group 15-43 (i.e. all expenditure classes from 15-18 to 34-43). Unlike rural and urban areas the percentage of persons in the city sector, more or less goes on increasing with the increase in the monthly expenditure level. A fairly large concentration of persons (81.59%) is found to be in the expenditure group 24-28 and upwards. It is also worthwhile to note that in the city sector the lowest two expenditure classes are unrepresented.

As we pass from the rural to the urban and city sectors, the concentration of persons in different expenditure levels is very contrasting. The rural population is concentrated more heavily in the lowest expenditure levels whereas the urban and city populations are concentrated more heavily in the highest expenditure levels. For

instance, if we merge separately the first and last 4 expenditure classes together we see that in the expenditure group 0-15, the percentage of rural, urban and city populations are 31.96, 16.40 and 4.80 respectively whereas in the expenditure group 34 & above the corresponding figures are 12.48, 29.76 and 59.85. It can also be observed that in each expenditure class upto 18-21 the rural percentage is greater than the urban percentage which again is greater than the city percentage of population whereas after the class 28-34, the position is reversed *i. e.* the city population is greater than the urban population which again is greater than the rural population. In the highest expenditure class the rural, urban and city populations are 1.21%, 6.08% and 17.88% respectively.

4.4 *Households* : The distribution of households in different expenditure classes follows almost the same pattern as is observed in case of persons. It may be noted that upto expenditure class 21-24 in rural sector and upto expenditure class 28-34 in the urban and city sectors, in any individual class, the proportion of households is less than the proportion of persons in it which shows that the number of persons per household in these expenditure classes is greater than in the rest of the expenditure classes (in respective sectors). In the later expenditure classes the proportion of households in any class is greater than the corresponding proportion of persons in it which means lower household size in these classes and which is also evident from the figures in columns (5)-(7) of table A.

4.5 *Consumption expenditure* : The expenditure (per person per 30 days) on all food items and all non-food items (and on all items therefore too) rises continuously with the rise in the level of expenditure. From Table 1.5.0, 2.5.0 and 3.5.0 in the report it is observed that, in general the constituent items of food and non-food also behave similarly. This is as much true for the rural areas as for the urban areas though in the case of cities it is not so much pronounced. One, would, however, expect less consumption of cereals and pulses and comparatively high consumption of milk, meat, fish and egg, fruits and nuts and other not so essential food items (contained in "other food") at higher expenditure levels which does not seem apparent from an examination of these estimates. May be, at higher expenditure levels better quality and high priced cereals and pulses are consumed leading to higher expenditure on these items. It would, therefore, be interesting to further analyse these estimates and reveal the actual position by examining the proportionate expenditure on constituent items of food. That is to say, it is to be examined what share of percentage is borne out by each constituent food item out of the total expenditure on "all food". This has been shown in cols. (2)-(13) of Table (B). It is clear from these percentage estimates that for "cereals and cereal substitutes" the percentage of consumption falls with increasing expenditure levels. Consumption expenditure on pulse also, on the whole, behaves in the same manner (except a few classes at top), though not so clearly. Also truly according to expectation the percentage expenditure on milk and other quality food items like fruits and nuts, meat, fish and egg, sugar, beverages and refreshments etc., constituting "other food" rises with rise in expenditure levels. This trend is not very smooth in case of cities probably due to smaller sample size in the expenditure classes concerned. Thus, it is clear from this that at higher expenditure levels, of the total allocation for food, households spend better proportion of it on milk and other food items and less on cereals and pulses.

It is also worthwhile to note from cols. (14) to (16) of Table (B) that out of the total expenditure the percentage expenditure on all food items decreases (in other words the level of living increases with the rise in expenditure levels. Pooling all expenditure classes we find that the percentage expenditure on food for rural, urban and city sectors are 70.25, 59.62 and 54.44 respectively which gives an indication of the comparative living condition of the persons in these three sectors. Comparing rural and urban percentages in cols. (14) and (15) it is found that generally in every expenditure class the percentage expenditure on food is greater in the rural sector than in the urban sector. Surprisingly enough the same trend is not found between urban and city percentages.

4.6 The report also provides for state estimates. Some main results of the state estimates are given here.

4.7 *Average household size* : Referring to Table (C) page 8, the lowest rural household size (4.42) is reported by Madras and the highest (5.87) by the Punjab against the all-India average of 5.15. In the urban sector, West Bengal records the lowest household size (3.63) and Jammu & Kashmir the highest (5.93), the average for the country being 4.59.

4.8 *Consumption expenditure* : In columns (6)-(13) of Table (C) the per capita expenditure on (i) cereals and cereal substitutes (ii) all food items, (iii) all non-food items and (iv) all items in states have been shown in terms of percentage of all India per capita estimates of these items. These figures have been provided to give a clear picture of the relative position of the states (with regard to consumption of these items) than is otherwise available.

Some notable observations can be derived from these figures. For example, in the rural sector, for cereals and cereal substitutes, the lowest and highest indices are given by Kerala and West Bengal; for all food items by Kerala and Jammu & Kashmir and so on.

A rough idea about the level of living of different states can be obtained from the percentage of total consumer expenditure devoted to food. The higher the percentage, the lower the level of living. It is observed from cols. (14) and (15) of Table (C) that in the rural sector, states which are on the lower side of all India average of 70.25 are Kerala, Maharashtra, Madhya Pradesh, Madras, Andhra Pradesh, Punjab, Rajasthan and Uttar Pradesh (in that order) which enjoy better level of living. On the other end stand states like West Bengal, Bihar, Orissa, Gujarat, Assam, Jammu & Kashmir and Mysore whose expenditure on miscellaneous items is, comparatively low. In the urban sector, the Union territories and the states of Maharashtra, Assam, Gujarat and Uttar Pradesh are in better position than the rest of the states. This is only to give a rough idea of the relative position of states with regard to their level of living as judged from their percentage expenditure on food. One should not draw sweeping conclusions, however. For instance, it is found that the highest percentage expenditure (75.64) on all food items is contributed by West Bengal and the lowest (65.62) by Kerala. Judged solely from the above criterion one would be led to believe that Kerala is better off than the rest of the country and West Bengal worst off. It is not safe to draw this conclusion without examining it further in detail and taking other factors into account which is not possible in such a short summary. Incidentally it may be mentioned that the per capita expenditures on all items for these two states (Kerala and West Bengal) are Rs. 20.36 and Rs. 23.69 respectively.

TABLE (B) : Consumer expenditure per person for some selected items for a period of 30 days expressed as percentage by monthly per capita expenditure classes and by sectors : all India.

| monthly per capita expenditure classes | per cent expenditure on (base : all food items=100) | | | | | | | | | | | | per cent expenditure on (base : all items=100) | | |

4.9 In the report are also included the estimates for the four big cities of Bombay, Calcutta, Delhi and Madras. Some important results of all cities have already been discussed in the preceding paragraphs. Main findings of individual cities are discussed here.

TABLE (D) : Consumer expenditure per person for a period of 30 days for some selected items and average household size by cities.

| cities | no. of sample households | average household size | expenditure on | | | per cent exp. on food |
|--------------------------------|--------------------------|------------------------|----------------|--------------------|-----------|-----------------------|
| | | | all food items | all non-food items | all items | |
| (1) | (2) | (3) | (4) | (5) | (6) | (7) |
| 1. Bombay | 222 | 4.64 | 31.89 | 26.31 | 58.20 | 54.79 |
| 2. Calcutta | 189 | 2.93 | 28.86 | 23.09 | 51.95 | 55.55 |
| 3. Delhi | 105 | 4.33 | 24.43 | 22.15 | 46.58 | 52.45 |
| 4. Madras | 85 | 3.47 | 23.83 | 20.02 | 43.85 | 54.34 |
| 5. all cities pooled | 601 | 3.84 | 28.32 | 23.31 | 52.03 | 54.43 |

4.10 *Average household size.*—From col. (3) of Table (D) it is observed that the city of Calcutta has the lowest (2.93) household size and that of Bombay the highest (4.64). The all cities pooled average is 3.84.

4.11 *Consumption expenditure :* The highest consumer expenditure (Rs. 58.20) is reported by Bombay and the lowest (Rs. 43.85) by Madras. The total consumer expenditure of the other two cities namely, Calcutta and Delhi are Rs. 51.95 and Rs. 46.58 respectively. The respective position of these cities with regard to the consumption of all food items and all non-food items follows the same pattern.

The level of living as represented by the percentage expenditure on food items is lowest for Delhi and highest for Calcutta. There is not much difference in the percentage expenditure on food for the other two cities.

SAMPLING DESIGN AND METHOD OF ESTIMATION

A. Sampling design for the rural sector

1. *General.*—The sampling design in the rural sector was stratified two-stage in which the first-stage units were the villages and the second-stage units were the households from which information was collected. The sampling design was self-weighting for each sub-sample at state level.

2. *Stratification.*—In each state, agricultural regions were formed by grouping contiguous districts having similar crop pattern and population density. These regions, 48 in number, were broadly the same as were adopted in the sixteenth and the seventeenth rounds. Strata were formed within each state or union territory by grouping together, as far as possible, contiguous tehsils or parts of contiguous tehsils within the same agricultural regions and NSS state block such that the sum of the sizes* of the villages were exactly equal for all strata within a state. While forming the strata, availability of good transport facilities between the tehsils of a stratum was also taken into account with a view to minimising the movement of an investigator within a stratum. In a few cases, however, strata cut across regions and/or NSS state blocks and were not geographically compact. Each compact section of such stratum within a region and NSS state block was called a sub-stratum. The number of strata formed was 353 in the whole of India. If a stratum was too large in area or if good transport facilities were not available between some segments of it, the stratum was divided into a convenient number of investigation zones so that the area of each zone was of manageable size and good transport facilities were available within each zone. Two investigation zones were selected with probability proportional to their total size. From each of the two selected investigation zones two sub-samples of 6 villages each were selected systematically with probability proportional to size.

3. *Allocation.*—The total sample size of 8472 villages was allocated to the different states on a joint consideration of their rural populations, areas under food crops and the available investigator strengths. This allocation was further modified to ensure a minimum sample size of 360 villages in each state and 192 villages in each of the union territories which participated in this round of NSS. The allocations were finally rounded off to multiples of 24 in view of 4 sub-samples of 6 villages each per stratum. Table (1.0.0) gives the allocation of sample villages to states.

4. *Selection of villages.*—Within each stratum (ignoring sub-strata), the tehsils were arranged in a serpentine order and 4 independent and interpenetrating sub-samples of 6 villages each were selected circularly systematically with probability proportional to size. In case a sample village was too large for investigation purposes the village was demarcated into two or more parts of nearly equal population (called hamlet groups) by grouping hamlets of that village and one of these groups was selected with equal probability. The survey for that village was restricted to the hamlet or group of hamlets thus selected.

5. *Selection of households.*—The households in the sampled village or hamlet groups were first arranged in 6 classes on the basis of their major source of income and household size. Then a 'combined sample' of households for several schedules including sch. 1.0 was selected linearly systematically using the sampling interval and random start provided in the sample list which were fixed so as to make the design self-weighting. From this combined sample a sub-sample for sch. 1.0 was selected by the same method with 10 as the sampling interval.

6. *Work programme.*—The survey period for the whole round was one complete year divided into 6 sub-rounds of 2 months each. In each sub-sample of a stratum the 6 sample villages were numbered from 1 to 6 according to their order of selection. Each sample village was visited and surveyed only once in the whole round. Thus sample villages 1, 4, 3, 6, 5 and 2 were surveyed in sub-rounds 1 to 6 respectively.

7. *Estimation procedure.*—The estimates presented are, in general, estimates of ratios like per person expenditure on different items of consumption or per person expenditure of a particular item expressed as a percentage to total expenditure. These estimates have been arrived at by computing in each case, the estimates of the totals of the two characteristics involved. The procedure of estimation of the total of a characteristic is explained below:

Let,

j denote — jth sample household

i ,, — ith sample village

S ,, — sth stratum

k ,, — number of strata in the state

h ,, — number of households selected

Y ,, — value of the characteristic

M ,, — constant multiplier.

Then, the estimate \hat{Y} of the state total of this characteristic built up from one sub-sample, is given by

$$\hat{Y} = M \sum_{s=1}^k \sum_{i=1}^6 \sum_{j=1}^{h_{si}} Y_{sij} \dots\dots\dots(i)$$

*The size of a village was taken as its 1951/1961 census population depending on the frame used in that state, rounded off to next multiple of 1000. The 1951 census list of villages was used as the sampling frame in all states except Jammu & Kashmir. In Jammu & Kashmir and the union territories, the 1961 census list of villages was used as the sampling frame.

Let $\hat{Y}_1, \hat{Y}_2, \hat{Y}_3$ and \hat{Y}_4 be the estimates as in (i) above on the basis of sub-samples 1, 2, 3 and 4 respectively. Then the combined estimate of state total based on all the four sub-samples is obtained as

$$\hat{Y}_0 = \frac{1}{4} (\hat{Y}_1 + \hat{Y}_2 + \hat{Y}_3 + \hat{Y}_4) \dots \dots \dots (ii)$$

The i^{th} sub-sample estimate of a ratio $R = \frac{Y}{x}$ is obtained as

$$\hat{R} = \frac{\hat{Y}_i}{\hat{x}_i} \dots \dots \dots (iii)$$

The combined estimate of R is given by

$$\hat{R} = \frac{\hat{Y}_0}{\hat{x}_0} = \frac{(\hat{Y}_1 + \dots + \hat{Y}_4)}{(\hat{x}_1 + \dots + \hat{x}_4)} \dots \dots \dots (iv)$$

B. Sampling design for the urban sector

8. *General.*—A two-stage sampling design was adopted in which the urban blocks formed the first stage units and the households the second stage units. The sampling design was self-weighting for each sub-sample at the sector level in a state.

9. *Stratification.*—In each state and union territory the urban area was divided into two sectors, sector 1 consisting of the state or union territory capital and all towns and cities with 1951 census population 50,000 and above, and sector 2 consisting of the remaining urban areas. These two sectors formed the two strata within each state except in Maharashtra. In Maharashtra, 3 strata were formed. Bombay city constituted one stratum, the rest of sector 1 formed another stratum and sector 2 the third stratum. Thus 37 strata were formed in all.

10. *Allocation.*—The total sample size of 4572 blocks was allocated to the states in proportion to their urban populations with twice the weightage to sector 1. In finalising the allocation to the states, the available investigator strength and the rural workload were also taken into account. The allocations were then modified to ensure a minimum of 144 sample blocks in each state and 48 sample blocks in each union territory participating in NSS. The allocation to sectors within a state was in proportion to the number of blocks in them with twice the weightage to sector 1. Tables (2.0.0) and (3.0.0) give the allocation of sample blocks to states and cities respectively.

11. *Selection of blocks.*—From each urban stratum 4 independent interpenetrating sub-samples of blocks were selected. In sector 1 the sample blocks were selected circular systematically from the list of blocks prepared by the NSS in the Urban Frame Survey (UFS), (except in Chandigarh where the 1961 census frame was used) with probability proportional to size which was block population rounded off to the next multiple of 1000. In sector 2 the sample blocks were selected circular systematically with equal probability after arranging the towns according to their means of livelihood pattern as per the 1951 census data. For selection, UFS frame was generally used and if that was not available 1961 census frame was used. In the remaining towns for which neither the UFS nor the 1961 census frame was available, the number of blocks in a town was taken as the number of 1951 census blocks in it with adjustment for the increase. In any such town the actual selection of the sample blocks was done in the field from the UFS frame or 1961 census frame or from subdivisions of the municipal divisions in the town, using the interval specified in the sample list.

In case a sample block was too large for investigation purposes sub-blocks of approximately equal population were formed within the sample block and one of them was selected with equal probability. The survey for that block was confined to the group of sub-blocks selected.

12. *Selection of households.*—The households in the sample block or selected sub-block were first arranged in 5 classes on the basis of their major source of income and household size. Then a 'combined sample' of households for several schedules including schedule 1.0 was selected linear systematically using the sampling interval and random start provided in the sample list which were fixed so as to make the design self-weighting. From this combined sample a sub-sample for sch. 1.0 was selected by the same method with 30 as the sampling interval.

13. *Work Programme.*—As in the rural sector the survey period of one year was divided into 6 sub-rounds of 2 months each. In each sub-sample of a stratum the urban blocks were numbered from 1 according to their order of selection. Each block was visited and surveyed only once in the whole round according to a given programme. For example, block numbers 1, 7, 13, were to be surveyed in sub-round 1, block numbers 2, 8, 14, were to be surveyed in sub-round 2, and so on.

14. *Estimation procedure.*—The estimates presented for the urban sector are similar to those of the rural sector. The estimate of the total of a characteristic for the urban sector is, however, obtained as follows :

Let,

j denote the j^{th} sample household
 i ,, ,, i^{th} sample block
 s ,, ,, s^{th} sector
 k ,, ,, number of sectors in the state
 h ,, ,, number of households selected
 n ,, ,, number of sample blocks selected
in sector and in a sub-sample
for the whole round.
 Y ,, ,, value of the characteristic
 M ,, ,, constant multiplier

Then, the estimate \hat{Y} of the state total of a characteristic built up from one sub-sample is given by

$$\hat{Y} = \sum_{s=1}^k M \sum_{i=1}^{n_s} \sum_{j=1}^{h_{si}} Y_{sij}$$

The combined estimates for aggregates and ratios are obtained in the same manner as described for the rural sector.

14. *Estimation procedure*—The estimator proposed for the urban sector is similar to that of the rural sector. The estimator of the total of y in the urban sector is however obtained as follows:

Let

| | |
|-----|---|
| i | denote the i th sample household |
| j | the j th sample block |
| k | the k th sector |
| k | number of sectors in the state |
| h | number of households selected |
| n | number of sample blocks selected in sector k in a subsample for the whole country |
| y | value of the characteristic |
| M | constant multiplier |

Then, the estimator \hat{Y} of the total of y in the urban sector is obtained as follows:

$$\hat{Y} = M \sum_{k=1}^k \sum_{j=1}^n \sum_{i=1}^h y_{ijk}$$

The combined estimator for agriculture and taxes are obtained in the same manner as described for the rural sector.
