FOREWORD

The National Sample Survey started in 1950, was reorganised in 1970 by bringing the Field, Technical and Data Processing wings under one organisation named the National Sample Survey Organisation. The 25th round of NSS (July 1970-June 1971) was the first round of survey to be carried out under the new set-up. The Governing Council of the National Sample Survey Organisation which was responsible for deciding the programme of enquiry took into consideration the great urgency and relevance of a study on the economic conditions of the weaker sections of the rural population, and resolved to devote the 25th round of NSS mainly for this purpose. For the purpose of the survey, the weaker sections were defined to be the lowest 10 per cent of the cultivating households, and the households having no cultivated holding whatsoever except that households from both these strata which might have derived their major income, more or less on a regular basis, from sources like self-employment in trading, manufacture, mechanised transport, professions and also from salaried employment or from rent were excluded. Thus the rural households selected for investigation were (i) the small cultivator households whose main stay was forming a small holding and wage labour, and (ii) non-cultivating wage earner household having no other means of livelihood.

A comprehensive enquiry on the earning and consumption expenditure of the household and their indebtedness and assets was carried out. Besides, information on the activity pattern of the individual members of the households was collected. In addition, as a special feature of this enquiry, a number of questions were asked to ascertain how the small cultivator households would appraise the difficulties and improvement possibilities of their farm businesses and also the extent and nature of response of these small cultivator and wage earner households to employment opportunities outside the village of residence.

Results of the survey are being brought out in four series covering the different aspects namely :—

- (a) Time disposition and wage rate.
- (b) Annual household earnings, indebtedness, cultivated holding and other assets.
- (c) Consumer Expenditure.
- (d) Problems and prospects.

Of these, the report under (a) are issued by sub-round (there are 4 sub-rounds each of 3 months duration) which makes available data on activity pattern and wage rate for different periods of the year. Reports on other aspects are presented for all sub-rounds combined. A separate all sub-round combined report on time disposition and wage rate is also under preparation. One important feature of the publication of the results of these series is that all essential tabulations are presented at regional level in addition to the all India and state level estimates which it is hoped would enhance the utility of the data to a great extent.

The present report, the draft of which was brought out in December, 1973, relates to results regarding activity pattern and wage rate for the third sub-round of the survey i.e. for the three months from January to March, 1971.

The sample design and schedules of enquiry were prepared by the Survey Design and Research Division (SDRD) of the National Sample Survey Organisation (NSSO). Field work of the survey was done by the Field Operations Division (FOD) in all states excepting West Bengal and Bombay city where the survey work was the charge of the field staff of the Indian Statistical Institute (subsequently merged with the NSSO). Processing of the Data was done by the Data Processing Division (DPD) of the NSSO.

Drafting of the report was the responsibility of Shri S. Sengupta, Deputy Director of the SDR Division. S/Shri M. Bhattacharyya, N. R. Dhar and P. C. Kundu, Assistant Directors, and N. K. Dasgupta and M. L. Joshi, Statisticians of the DPD of NSSO were in technical charge of the Manual Tabulation of the Data. S/Shri A. K. Chaudhury, S. Das, S. Palit, D. Sarkar and G. R. Varnwal did the overall supervision of computation work. I take this opportunity to record my appreciation of the work of these officers. I also wish to mention the names of Shri Nisith Chowdhury Statistical Assistants for this careful work in scrutinising the end results, and Shri A. Roy for his assistance in typing the report.

NEW DELHI,

Dated, the 17th January, 1976.

V. M. DANDEKAR

Chairman, Governing Council for N.S.S.O.

THE NATIONAL SAMPLE SURVEY : 25TH ROUND

SUB-ROUND III : JANUARY-MARCH 1971

NUMBER

TIME DISPOSITION AND WAGE RATE FOR ECONOMICALLY WEAKER SECTIONS OF THE RURAL POPULATION OF INDIA

*This report was prepared by the NSS Organisation under the Guidance of the Governing Council for NSS Organisation. The views contained in the report are not necessarily those of the Government of India.**

Introduction

1. The survey on the economic condition of the weaker sections of the rural population in India was conducted in the twentyfifth round of the National Sample Survey (NSS). This is the third part of the report on time disposition' of and the rate of wage earned by the weaker sections of the rural population in India. The whole survey period of the round was divided in to four sub-rounds of three months' duration each. Results presented here relate to the third sub-round that is, the first quarter of the calendar year 1971.

2. The weaker sections were constituted of the small cultivator households and the non-cultivating wage earner households. Small cultivator households were defined as the lowest ten percent of the households having some cultivated land during the reference period of July 1969-June 1970, and the 'non-cultivating wage earner households' were defined as households having no cultivated land whatsoever during the same reference period. Further, any of these households from either of these strata which might have derived its major income during the reference period, more or less on a regular basis, from sources like self-employment in trading, manufacture, mechanised transport, professions and also from salaried employment or from rent, was to be excluded.

3. The sample design of the rural survey of the NSS 25th round was a stratified one with two stage selection within each stratum. The first stage units were villages and the second stage units were households for socio-economic enquiries.

4. Results presented in the report are based on the data of central sample.

*This first part, NSS D 230/1, based on the data of the first sub-round was submitted in December, 1972. The present report is a revised version of NSS D 245 (December, 1973).
