*This report was prepared by the NSS Organisation under the guidance of the Governing Council for NSS Organisation. The views contained in the report are not necessarily those of the Government of India.*

## FOREWORD

The National Sample Survey started in 1950, was reorganised in 1970 by bringing the Field, Technical and Data Processing wings under one organisation named the National Sample Survey Organisation (NSSO). The 25th round of NSS (July 1970-June 1971) was the first round of survey to be carried out under the new set-up. The Governing Council of the National Sample Survey Organisation which was responsible for deciding the programme of enquiry took into consideration the great urgency and relevance of a study on the economic conditions of the weaker sections of the rural population, and resolved to devote the 25th round of NSS mainly for this purpose. For the purpose of the survey, the weaker sections were defined to be the lowest 10 percent of the cultivating households, and the households having no cultivated holding whatsoever except that households from both these strata which might have derived their major income, more or less on a regular basis, from sources like self-employment in trading, manufacture, mechanised transport, professions and also from salaried employment or from rent were excluded. Thus the rural households selected for investigation were (i) the small cultivator households whose main-stay was farming a small holding and wage labour, and (ii) non-cultivating wage earner households having no other means of livelihood.

A comprehensive enquiry on the earning and consumption expenditure of the households and their indebtedness and assets was carried out. Besides, information on the activity pattern of the individual members of the households was collected. In addition, as a special feature of this enquiry, a number of questions were asked to ascertain how the small cultivator households would appraise the difficulties and improvement possibilities of their farm business and also the extent and nature of response of these small cultivator and wage earner households to employment opportunities outside the village of residence.

Results of the survey are being brought out in four series covering the different aspects namely :—

- (a) Time disposition and wage rate,
- (b) Annual household earnings, indebtedness, cultivated holding and other assets,
- (c) Consumer expenditure,
- (d) Problems and prospects.

The present report, the draft of which was brought out in June 1976 relates to results regarding activity pattern and wage rate for small cultivator and non-cultivating wage-earner households for all sub-rounds combined (there were four sub-rounds each of three month's duration).

To make available data on activity pattern and wage rate at different periods of the year, reports based on data of each sub-round separately have already been released.

The sample design and schedules of enquiry were prepared by the Survey Design and Research Division (SDRD) of the National Sample Survey Organisation. Field Work of the survey was done by the Field Operations Division (FOD) in all states excepting West

Bengal and Bombay city where the survey work was the charge of the field staff of the Indian Statistical Institute (subsequently merged with FOD, NSSO). Processing of the Data was done by the Data Processing Division (DPD) of the NSSO.

Drafting of the report was the responsibility of Shri S. Sengupta, Dy. Director S/Shri Bhattacharya, N. R. Dhar, P. C. Kundu and N. K. Dasgupta, Assistant Directors and M. L. Joshi, Statistician of the DPD of NSSO were in technical charge of the Manual Tabulation of the Data. S/Shri A. K. Chaudhury, S. Das, S. Palit, D. Sarkar and G. R. Verwal did the overall supervision of computation work. I take this opportunity to record my appreciation of the work of these officers. I also wish to mention the name of Shri Nisith Chowdhury, Assistant Superintendent for his careful work in scrutinising the end results, and Shri A. Roy for his assistance in typing the report.

16th July, 1976

V. M. DANDEKAR,

*Chairman*

Governing Council,

National Sample Survey Organisation.

THE NATIONAL SAMPLE SURVEY  
TWENTYFIFTH ROUND : JULY 1970—JUNE 1971

NUMBER 237

**TIME DISPOSITION AND WAGE RATE FOR ECONOMICALLY WEAKER SECTION OF RURAL POPULATION OF INDIA**

**SECTION ONE**

**INTRODUCTION**

1.1 This report contains tables on "time disposition" & wage rate for economically weaker sections of the rural population of India. The results presented in the report is the average position for the year July 1970-June 1971<sup>1</sup>. Detailed tables for each of the 63 regions covered in the rural areas of the country and for each state have been placed in the report.

1.2 The subject coverage and sample design of the twentyfifth round of the survey was finalised by the National Sample Survey Organisation Governing Council (NSSO-GC). The technical work relating to details of the sample design, sample selection, preparation of survey questionnaires and instructions for the field and training of field staff had been done by the Indian Statistical Institute (ISI). The field work of the survey was done by the Directorate of National Sample Survey, subsequently renamed as Field Operation Division (FOD), in all the states, excepting in West Bengal and Bombay City where the survey work was done by the ISI Field Staff (subsequently merged with FOD).

1.3 According to the decision of the Governing Council of the NSSO, the main plank in the socio-economic programme of the 25th round of National Sample Survey was the enquiry into economic conditions of the weaker sections of the rural population in the country. The weaker sections for the purpose of this enquiry were to comprise two strata of population *viz.* the "small cultivator households" and the "rural non-cultivating wage earner households". Small cultivator households were defined as the lowest ten percent of the households having some cultivated land during the reference period July 1969-June 1970; and non-cultivating wage earner households were considered to be those having no cultivated land whatsoever during the same reference period. Further, any of the households from either of these strata which might have derived its major income during the reference period, more or less on a regular basis, from sources like self-employment in trading, manufacture, mechanised transport, professions and also from salaried employment or from rent, was to be excluded. The rural households thus sifted and classified were to constitute two or more homogeneous groups *viz.* (1) the small cultivator households whose mainstay was forming a small holding (size of which is not the same nor is it fixed throughout the country), and (2) non-cultivating wage earner households whose mainstay was wage labour and who had no cultivated land.

1.4 A number of reports have been brought out covering the various topics enumerated in the previous paragraph. The present one is the fifth of the series of reports on time disposition of and rate of wage earned by the weaker sections. The four earlier reports on the subject contained results of the four sub-rounds in which the whole survey period of twelve months was equally sub-divided.

1.5 *Period of survey.*—The twentyfifth round of survey of NSS started in July 1970 and continued till the end of June 1971. Four independent sets of sample villages were covered the four quarters (four sub-rounds) of the one year survey period.

1.6 *Participation by States.*— In the NSS twentyfifth round all the State Governments excepting that of West Bengal and Nagaland and all the Union Territories excepting Himachal

---

The draft reports (NSS No. 270) were submitted in June 1976.

Pradesh, Goa, Pondicherry and Chandigarh participated in the work of NSS on a full matching basis.

1.7 *Geographical coverage*.—The survey had been extended over the whole of rural areas of Indian union excepting North East Frontier Agency, Ladak, Mizo Hills, Nagaland, Union Territories of Andman and Nicobar Islands and Laccadive, Minicoy and Amindivi Islands and a few tehsils of Madhya Pradesh, Maharashtra and Tripura.

1.8 This report contains the following two tables for small cultivator and non-cultivating wage earner households :

Table (1) : Percentage distribution of estimated man-days in a week under different types of economic and other activities for persons belonging to different sex-age groups : small cultivator and non-cultivating wage earner households in rural areas.

Table (2) : Average rate of earnings (Rs. 0.00) per man-day in agricultural and other occupations by employees of different sex-age groups : small cultivator and non-cultivating wage earner households in rural areas.

Both these tables are based on the complete set of information collected during the whole of the survey period of the NSS 25th round. Hence those exhibit the average annual position for the survey year July 1970-June 1971 and not to any season or part of the year. Results for 63 regions of rural India, for each state and union territory of the country and for all-India rural have been presented in the report.

## SECTION TWO

### CONCEPTS & DEFINITIONS

*Concepts 2.1* So far as the collection of information about activity particulars are concerned the usual procedure so long followed had been primarily to classify the population by labour force status that is, first of all it had to be ascertained whether a person is "gainfully employed" or "unemployed" or "outside labour force" on the basis of the person's activities during the reference period. After classifying the population into these three status categories the details of a person's activities on each day of the reference period (usually seven days preceding the day of survey) were being collected for gainfully employed population only. In this round however the procedure of predetermining a person's status was not attempted. For each person the details of his activities (including inactivity), no matter whether gainful or otherwise, were collected for each day of the reference week. For this purpose the following ten activity codes were listed to cover the whole range of activities.

description of activity	Code
<i>worked in farm</i>	
1. worked in own farm	1
2. worked in other's farm as exchange labour	2
3. worked in other's farm for salary or wages	3
<i>worked in non-farm occupation</i>	
4. as self-employed	4
5. as non-selfemployed	5
<i>did not do any work (gainful)</i>	
6. attended educational institution	6
7. engaged in domestic work	7
8. seeking or available for work	8
9. not available for work due to illness, leave, rest etc.	9
10. not available for work due to other reasons	0

#### *Definitions*

2.2 *Household*.—A group of persons normally living together and taking food from a kitchen was considered to constitute a household.

2.3 *Activity codes*.—"Out of the ten categories of activity listed in para 2.1, the codes 1 to 5 were under the "gainful work" categories in the sense that those are economically productive activities and the total estimated number of man-days in this group of activity codes is the estimate of total employed man-days. Categories 6 & 7 are self explanatory and the active man-days in these categories do not belong to the 'gainful work' group. The total man-days with code 8 is the estimate of the man-days which were available for gainful work but remained unutilised due to non-availability of work that is, the estimate of "unemployed" man-days. Code 9 indicate the category of man-days which was not available for gainful work though the concerned persons had job or enterprise to work but due to some reasons they voluntarily abstained themselves from participating in such activity. The last code "0" stands for the residual category of man-days having no such activities as listed under codes 1 to 9.

2.4 *Man-day*. For each individual listed in a sample household there were seven man-days of activity during the reference week. The activity of a person might not be the same on

all the seven days of the reference period. Provisions were, therefore, made to record the actual activity of the concerned person on each of the seven days.

2.5 *Intensity code*.—On a particular day a person might have been engaged in one activity only. In such cases the recorded intensity code was 1, indicating that the person was full time engaged in that activity. If on the other hand, the person pursued more than one activity on the same day, the first two activities, considering the amount of time spent on those were recorded with intensity code “ $\frac{1}{2}$ ” against each of the two. The decision whether the intensity is half or full would rest on the judgement of the informant. In case of doubt and difficulty, however, attachment for 4 hours or less was taken to be of half intensity and more than 4 hours attachment as full intensity.

2.6 *Man-day at work*.—A man-day utilised in any of the activities under codes 1 to 5 was considered to be an employed man-day at work.

2.7 *Unemployed man-day* : If on a day a person had been seeking work or was available for work but could not secure one (activity code 8), that particular man-day was an unemployed man-day.

2.8 *Man-day with job but not at work*.—Man-days of voluntary abstention from gainful activities (activity code 9) were put under this category.

2.9 *Economically active man-days*.—All the man-days under the activity codes 1 to 5, 8 and 9 were treated as economically active man-days.

2.10 *Economically inactive man-days (man-days not in labour force)*.—The man-days spent under the remaining activity codes *viz.* 6, 7 & ‘0’ were treated as economically inactive man-days.

2.11 *Incidence of unemployment*.—The percentage of unemployed man-days to total economically active man-days has been termed as incidence of unemployment.

2.12 *Rate of unemployment*.—The rate of unemployment is defined as the percentage of the man-days seeking work or available for work (activity code 8) to the total number of man-days

2.13 *Wage rate*.—The total of the amount receivable in cash and in kind per man-day of gainful work was considered to be the wage rate. For imputing the value of wages in kind the prevailing retail market price had to be considered.

## SECTION THREE

### SOME FINDINGS

3.1 Some broad features of the observed results have been discussed in this section. These are seasonal variations in the work participation rates, rates of unemployment or in other types of activities which can be read from the reports on the subject relating to the different sub-rounds. In the present report, only the results for the whole of the survey period have been presented and discussions is restricted to those only.

#### *Rural Small Cultivator Households*

3.2 *Time disposition (all-India rural).*—Nearly 42 percent of the man-days were observed to be economically active. The corresponding percentages were 54 for males and 28 for females. The percentages of man-days at work were 47, 23 and 35 for males, females and persons respectively. The small cultivators, although have some cultivated land, depend to a large extent on “work in others farm for salary/wages”. For males, the percentage of man-days “worked in own farm” was 14.84 and that for “work in other’s farm” was 23.24. Females participation rates in such activities, although lower had the same pattern. Both for males and females the proportion of man-days spent in “work in other’s farm for salary/wages” was the highest in age group 15—44 years. The proportion of “man-days worked in other’s farm to the man-days worked in own farm” was also higher in the age group 15—44 as compared to the corresponding ratios in other age groups. The values of this ratio were 0.18, 1.20, 1.92, 1.44, 0.73 and 1.62 for the age groups 0—9, 10—14, 15—44, 45—59, 60 & above and all ages respectively for all persons of the small cultivator households. This observation was also made on the results of the first sub-round.\*

3.3 The rate of unemployment was 2.85 for males and 2.42 for females and the incidence of unemployment was 5.30 for males and 8.52 for females. Incidence of unemployment did not show much variation over different ages for males. For females, on the other hand, it declined progressively with advancement in age (10.22 for age group 10—14 to 5.87 for ages 60 and above.)

3.4 *Attending educational institution.*—For males only 9.20 percent of man-days in age group 0—9 years and 26.12 percent in age group 10—14 years were utilised in attending educational institution. The corresponding percentages for females were even lower : 4.36 percent in age group 0—9 years and 9.68 percent in the next higher age group (10—14 years).

3.5 *Activity pattern by state/region.*—The percentage of economically active man-days for males was the lowest in Haryana (46.28) and was the highest in Andhra Pradesh (58.58) compared to these extreme figures the All-India average percentage was 53.77. Likewise, within a state in turn there was considerable variation in the proportion of economically active males. For example in Haryana, the percentage was 55.03 in the eastern region and only 38.01 in the western. In Gujarat also, two of the five regions had lower proportions compared to those for the other three. Regional variation could also be traced in Jammu & Kashmir, Mysore, Orissa and Rajasthan. Regional variation was much less for Assam, Bihar, Madhya Pradesh, Maharashtra, Mysore, Punjab, Tamil Nadu, Uttar Pradesh and West Bengal. For females, the economically active proportions exhibited much wider variations among the states, and also among the regions within a state.

---

\*“Time Disposition, wage rate and attitudes towards Employment opportunities outside village for the weaker section of the rural population of India”, NSS Draft Report No. 230/1.

3.6 *Percentage of man-days worked in own farm.*—In both the regions of the Punjab the percentage of man-days worked in own farm was of the order of 40 percent for males. In no other region such high proportion of self employment in agriculture could be seen. More 30 percent man-days were spent in “work in own farm” for males in Saurashtra of Gujarat, Eastern region of Haryana, Outer Hills of Jammu & Kashmir, and North Eastern and Southern regions of Rajasthan. Barring a few exceptions, in all the regions of Andhra Pradesh, Bihar, Kerala, Madhya Pradesh, Maharashtra, Mysore, Orissa, Tamil Nadu and West Bengal the proportions of man-days (for males) worked in own farm were well below 15 percent. For Kerala in particular, in both of its region, this proportion was negligibly small (0.55 percent for northern and 2.23 for southern).

3.7 *Percentage of man-days worked in other's farm.*—Compared to the all-India percentage of man-days spent in work in other's farm of 23.24, high percentage in that activity was recorded for Andhra Pradesh, Bihar, Madhya Pradesh, Maharashtra, Mysore, Orissa, Tamil Nadu and West Bengal. The corresponding percentages for the regions of Haryana, Jammu & Kashmir, the Punjab and Rajasthan were much on the lower side.

3.8 *Percentage of man-days seeking work or available for work unemployed.*—As for other activities, the discussion here is also restricted to the male population only. Both the regions, Northern and Southern, of Kerala reported to have lost more than 10 percent of their respective total man-days in seeking employment (or being available for it). The proportion was also high for the regions of Coastal Orissa (8.18 percent), Western Rajasthan (7.97 per cent) Coastal Southern and Inland, Tamil Nadu (9.39 & 7.31 per cent respectively). The proportion of unemployed man-days was low in the regions of Gujarat, Haryana, the Punjab and Uttar Pradesh. The all-India percentage of unemployed man-days was 2.85 (for males). Given in Table (S. 1) below, the highest and the lowest percentages of man-days in some activity/activity groups to total man-days for male population of small cultivator households.

TABLE (S. 1) : REGIONS WITH THE HIGHEST AND THE LOWEST PERCENTAGE AND THE AVERAGE ALL-INDIA PERCENTAGE OF MAN-DAYS IN SOME ACTIVITY/ACTIVITY GROUPS TO TOTAL MAN-DAYS FOR MALE POPULATION OF SMALL CULTIVATOR HOUSEHOLDS

activity	highest/ lowest/ average	percentage of man-days	region	state
1	2	3	4	5
1. economically active	highest	62.85	Southern	Orissa
	lowest	38.01	Western	Haryana
	average	53.77		All-India
2. worked in own farm	highest	40.44	Northern	Punjab
	lowest	0.55	Northern	Kerala
	average	14.84		All-India
3. worked in other's farm for salary or wages.	highest	34.96	Eastern Plains	West Bengal
	lowest	3.91	Outer Hills	Jammu & Kashmir
	average	23.24		All-India
4. seeking or available for works	highest	12.63	Northern	Kerala
	lowest	*		
	average	2.85		All-India

\*In the regions this percentage was reported to be zero.

3.9 *Wage rate*.—A large section of the small cultivator households have to supplement their income derived from other occupations in addition to “work in own farm”. The rates of wage (Rs. 0.00/man-day of work) received by a man in the age group 15-59 years for work in other’s farm was Rs. 2.08. A man in the same age group could receive Rs. 2.58 as wage for a day’s work in non-farm occupation. The corresponding rate of wage for females were Rs. 1.40 and Rs. 1.52 in farm and non-farm activities respectively.

3.10 *Wage rate in states/regions*: The rate of wage for males in age group 15—59 was much higher than the All-India average rate, both in farm and in non-farm occupation, in all the regions of Assam, Haryana, Jammu & Kashmir (excepting Jhelum valley) Kerala and Punjab. In all these regions the wage rate was above Rs. 3.00. Such high rate of wage for the same group of population was also recorded in Coastal Maharashtra, Coastal Northern Tamil Nadu, Himalayan Uttar Pradesh and Himalayan West Bengal in non-farm occupation. Saurashtra of Gujarat recorded high rate of wage in both farm and non-farm occupations. Gujarat Rs. 2.38 and West Bengal Rs. 2.55 recorded slightly higher wage rate while Maharashtra Rs. 2.18, Rajasthan Rs. 2.28, Tamil Nadu Rs. 2.22 and Uttar Pradesh Rs. 2.18 recorded wage rates which were very close to the All-India average of Rs. 2.17. Other states *viz.* Andhra Pradesh (Rs. 1.71), Bihar (Rs. 1.95), Madhya Pradesh (Rs. 1.57), Mysore (Rs. 1.81) and Orissa (Rs. 1.77) had low wage rate compared to All-India average of Rs. 2.17 for males in age group 15—59. Wage rate for females also exhibited similar statewide variation. In Table (S.6.1.) the wage rates for farm and non-farm occupations are shown by sex and region for population belonging to the age group 15—59 years.

3.11 Table (S.2) shows the regions where the highest and the lowest rate of wage had been recorded for men and women in age group 15—59 years in farm and non-farm occupations.

TABLE (S. 2) : REGIONS WITH THE HIGHEST AND THE LOWEST AVERAGE RATE OF WAGE (RS. 0.00 PER MAN-DAY OF WORK) AND THE AVERAGE ALL-INDIA WAGE RATE IN FARM AND NON-FARM OCCUPATION FOR MALES AND FEMALES IN SMALL CULTIVATOR HOUSEHOLDS

occupation	sex	highest/ lowest/ average	wage rate	region	state
(1)	(2)	(3)	(4)	(5)	(6)
farm . . . . .	males	highest	6.03	Southern	Punjab
		lowest	1.30	Inland, Eastern	Madhya Pradesh
		average	2.08		All-India
	females	highest	4.00	Southern	Punjab
		lowest	0.64	Northern	Punjab
		average	1.40		All-India
non-farm] . . . . .	males	highest	4.98	Southern	Punjab
		lowest	1.24	Southern	Orissa
		average	2.58		All-India
	females	highest	5.05	Outer Hills	Jammu & Kashmir
		lowest	0.66	Himalayan	Uttar Pradesh
		average	1.52		All-India

*Rural Non-Cultivating Wage Earner Households*

3.12 *Time disposition.*—Broadly, at all-India level the activity pattern of population in wage earner households was similar to that of the population in small cultivator households. The percentage of man-days in labour force was 53.60 for males and 30.12 for females. Out of the 46.22 percent of male days reported to be at work 33.33 percent had been spent in work for salary/wages in other's farm. Similarly, a major portion of 17.05 percent out of 23.90 percent of female-days at work was utilised in work in other's farm. Restricting to the age group 15—44 years only, the percentages of man-days in labour force, total at work and spent for work in other's farm were respectively 90.81, 80.07 and 59.76 for males and 48.24, 39.19 and 29.04 females.

3.13 *Rate of unemployment.*—The percentages of man-days seeking work or available for work were 3.45 and 3.04 for males and females respectively.

3.14 *Attending educational institution.*—Percentages of man-days under the activity "attended educational institution" were of the same order as observed for small cultivator households; for males 9.03 and 23.47 and for females 3.84 and 9.23 in age groups 0-9 and 10-14 respectively.

3.15 *Activity pattern in different state/regions.*—The discussions on activity pattern is restricted to male population only. As for small cultivators, non-cultivating wage earners also recorded the highest percentage of man-days in labour force in Andhra Pradesh (57.68) while Haryana showed the lowest proportion (43.74). In Rajasthan the inter regional variation was very marked. The percentage in labour force was 66.93 in North Eastern Rajasthan and 36.18 in Southern Rajasthan, the last one is the lowest for all the regions. The highest percentage (74.05) of man-days in labour force was recorded in the Himalayan region of West Bengal. It had earlier been observed that for small cultivator households the proportion in labour force was the highest in Inland, Southern region of Andhra Pradesh. A closer look into the results indicate that for small cultivators the participation of males in age group 10.14 was considerably high. Whereas in Himalayan region of West Bengal although the demand of labourers in tea plantation could drag in more person-days in economic activity and had its influence to raise the participation rate, due to the smallness of the sample size nothing can be said on its reliability.

3.16 *Percentage of man-days worked in other's farm.*—States of Andhra Pradesh, Bihar, Gujarat, Madhya Pradesh, Maharashtra, Mysore, Tamil Nadu and West Bengal had recorded high percentage of man-days spent in work for salary/wages in other's farm. In some of the regions of these states the percentage crossed the 40 percent mark. In general, in almost all the regions of these states, the percentage was high (hardly less than 30). Against these, the corresponding proportions for regions of Jammu & Kashmir and Kerala were appreciably low.

3.17 *Percentage of man-days worked in non-farm occupation.*—There were two types of activities in non-farm occupations : work for salary or wages, or work as self-employed. The percentage of total man-days under these two activity categories was more than 20 in Kerala and Jammu & Kashmir. Such high proportion was recorded in all the regions of Jammu and Kashmir, Northern Kerala, Western Haryana, Coastal Maharashtra, Inland Southern Mysore, Western Rajasthan, Western Uttar Pradesh and Himalayan West Bengal. This proportion was less than 5 percent in Plains Southern region of Gujarat, Inland Northern region of Mysore and Coastal Southern region of Tamil Nadu.

3.18 *Percentage of man-days seeking or available for work (unemployed).*—Compared to small cultivator households, higher proportion of man-days seeking or available for work was reported by the wage earner households. More than 4 percent of man-days were reported to be in

the category of seeking or available for work in Andhra Pradesh, Kerala, Rajasthan and Tamil Nadu. This proportion was the highest in Southern Kerala (11.73) and was more than 5 per cent in the regions Coastal Andhra Pradesh (5.58), Eastern Gujarat (5.78); Jhelum Valley of Jammu & Kashmir (6.06); Coastal Orissa (6.51); Western Rajasthan (10.18); two coastal regions of Tamil Nadu (Northern-5.21, Southern-8.25). Proportion of unemployed man-days was the lowest (1.66 per cent) in Haryana; the next low figure of 1.75 per cent was recorded for Assam. Low unemployment rate was recorded in Inland, Southern region of Haryana (0.96 per cent), Inland, Eastern region of Mysore (0.94 per cent); Southern Rajasthan (0.30 per cent); Himalayan (0.90 per cent) and Central (0.99 per cent) regions of Uttar Pradesh.

3.19 In Table (S.3) below the highest and lowest percentages and the average All-India percentage of man-days in some activity/activity groups to total man-days for male population of non-cultivating wage earner households.

TABLE (S.3) : REGIONS WITH THE HIGHEST AND THE LOWEST PERCENTAGE AND THE AVERAGE ALL-INDIA PERCENTAGE OF MAN-DAYS IN SOME ACTIVITY/ACTIVITY GROUPS TO TOTAL MAN-DAYS FOR MALE POPULATION OF NON-CULTIVATING WAGE EARNER HOUSEHOLDS

activity	highest/ lowest/ average	percentage of man-days	region	state
(1)	(2)	(3)	(4)	(5)
1. economically active	highest	74.05	Himalayan	West Bengal
	lowest	36.18	Southern	Rajasthan
	average	53.60	All-India	
2. worked in other's farm for salary or wages.	highest	45.90	Eastern	Madhya Pradesh
	lowest	6.08	Southern	Rajasthan
	average	33.33	All-India	
3. worked in non-farm occupations	highest	31.94	Northern	Kerala
	lowest	3.36	Coastal Southern	Tamil Nadu
	average	10.76	All-India	
4. seeking or available for work	highest	11.73	Southern	Kerala
	lowest	*	—	—
	average	3.45	All-India	

\*In four regions this percentage was reported to be zero.

3.20 *Wage rate.*—Male members in age group 15—59 years of non-cultivating wage earner households enjoyed slightly higher wage rate of wage than those of small cultivator households. The rate of wage they received in farm and non-farm occupation was Rs. 2.31 and Rs. 2.81 respectively. For females however the difference between the rates of wage in farm and non-farm occupation for between small cultivators and wage earners was not of high order. The wage rate for females in age group 15—59 varied between Rs. 1.44 to Rs. 1.50.

3.21 *Wage rate in states/regions.*—High rate of wage (more than Rs. 3/-) for males (aged 15—59 years) in farm occupation was reported by Assam, Haryana, Jammu & Kashmir, Kerala, Punjab and Saurashtra of Gujarat. In non-farm occupation high rate of wage was reported

in those states and regions and also in Northern Bihar, Inland Western Maharashtra, Coastal & Ghata and Inland Eastern regions of Mysore, Western Rajasthan, Western Uttar Pradesh and in Central Plains of West Bengal. The all occupation average rate of wage for males in age group 15—59 was Rs. 2.40 per day's work. Compared to this All-India rate the rate of wage could be considered low in Andhra Pradesh (Rs. 1.92), Bihar (Rs. 2.01), Madhya Pradesh (Rs. 1.76) Mysore (Rs. 1.98), Orissa (Rs. 2.01). In the remaining states *viz.*, Gujarat (Rs. 2.70), Maharashtra (Rs. 2.24), Tamil Nadu (Rs. 2.23), Uttar Pradesh (Rs. 2.47) and West Bengal (Rs. 2.60) the rate was either higher a nearly equal to the All India average.

TABLE (S 3) : REGIONS WITH THE HIGHEST AND THE LOWEST AVERAGE RATE OF WAGE (RS. 0.00 PER MAN-DAY OF WORK) AND THE AVERAGE ALL-INDIA WAGE RATE IN FARM AND NON-FARM OCCUPATION FOR MALES AND FEMALES IN NON-CULTIVATING WAGE EARNER HOUSEHOLD.

occupation	sex	highest/ lowest/ average	wage rate (Rs. 0.00/ man-day)	region	states
(1)	(2)	(3)	(4)	(5)	(6)
farm	males	highest	5.53	Southern	Punjab
		lowest	1.24	Inland Eastern	Madhya Pradesh
		average	2.31	All-India	
	females	highest	4.33	Southern	Punjab
		lowest	0.99	Inland Eastern	Maharashtra
		average	1.44	All-India	
non-farm	males	highest	6.55	Southern	Punjab
		lowest	1.38	Southern	Orissa
		average	2.81	All-India	
	females	highest	5.00	Eastern & Western Haryana	
		lowest	0.66	Mountainous	Jammu & Kashmir
		average	1.50	All-India	

3.22 What have been discussed in this section are summarised in the following two sets of tables. Tables (S5.1) and (S5.2) contain regionwise results on the proportion of man days in some types of activities and groups of activities by sex for the two types of weaker section households, and Tables (S6.1) and (S6.2) contains the results on wage rate in farm and non-farm work relating to men and women in age group 45—59 years of small cultivator and non-cultivating wage earners households.

TABLE (S 5.1) : PERCENTAGE OF MALE-DAYS IN (I) LAPOUR FORCE, (II) WORKED IN OWN FARM, (III) WORKED IN OTHERS' FARM FOR SALARY OR WAGES AND (IV) SEEKING OR AVAILABLE FOR WORK FOR SMALL CULTIVATOR HOUSE HOLD

## APPENDIX I

### SAMPLE DESIGN AND ESTIMATION PROCEDURE

I.1 *Sample Design.*—The sample design of the rural survey of the NSS twentyfifth round was a stratified one with two-stage selection within each stratum. The first stage units were villages and the second stage units were households for the socio-economic enquiries. The sample design had been made *self-Weighting* for each schedule of enquiry at the state level. The sample villages were usually selected in the form of two independent and interpenetrating sub-samples. Subsample 1 was surveyed by one party of investigators and sub-sample 2 by another party.

I.2 *Sample size (Central sample).*— The total sample size for household enquiries in the rural areas was 8400 sample villages and the average sample size was expected to be 2 households in a village for each of the schedules 16.1 and 16.2.

I.3 *Work Programme.*—The survey period (one year) of this round had been divided into four-sub-rounds of three months duration each. In each sub-sample of a rural stratum there were 12 sample villages. These 12 villages were sub-divided into four sets of three villages each in a specified manner. Each set of three villages was surveyed in a specified sub-round. Thus, on the whole all the 12 villages were covered once during the full survey period.

I.4 *Sampling frame.*— The frame was the list of villages as per the 1961 population census.

I.5 *Stratification* : The country had been divided into 65 agricultural regions by grouping within each state or union territory, districts having similar population density and crop pattern. Strata were formed within each region, by grouping tehsils having (i) geographical continuity (ii) similar crop pattern and population density, and (iii) good transport facilities amongst them. The number of persons engaged in agricultural occupation was more or less than same for each stratum within a region.

I.6 *Allocation.*—The all-India sample size had been allocated to the states on a joint consideration of their rural population, area under cereal crops and available investigator strength. This was modified to (i) ensure a minimum of 360 villages in each state (excepting Haryana and Punjab), (ii) take account of state-wise variation in work-load and (iii) make the sample size a multiple of 24 in order to facilitate an allocation of 24 villages in each rural stratum.

I.7 *Selection of Villages.*—For the central sample in each stratum two independent sub-samples of 12 villages each had been selected circular systematically with equal probability.

I.8 *Selection of households.*—All the households in a sample village were divided into the following three sub-strata: (1) households having no cultivated land, (2) the lowest ten percent of households having cultivated land and (3) remaining households. Households deriving more or less regular and major income in the last year from self-employment in trading establishment, manufacture, construction, mechanised transport, professions or salaried employment or rent were excluded from both sub-strata 1 and 2 and were included in sub-stratum 3. Samples for schedules 16.1 and 16.2 were selected from sub-strata 1 and 2 respectively. Sample households were

selected linear systematically using intervals and random starts specified for this purpose so as to get about 2 sample households on an average, from each sub-stratum.

### I.9 Estimation procedure

*s* : subscript for sth stratum

*i* : subscript for ith sample village of a sub-round

*j* : subscript for jth sample household

*k* : number of strata in the state

*h* : number of households selected for the enquiry

*y* : value of the characteristic

If *Y* stands for the estimate of the *state total* for the characteristic *y* in the concerned schedule.

$$Y = M \sum_{s=1}^K \sum_{i=1}^{12} \sum_{j=1}^{h_{si}} Y_{sij}$$

Where *M* is the constant multiplier for the particular schedule.
