THE NATIONAL SAMPLE SURVEY

TWENTYTHIRD ROUND : JULY 1968 - JUNE 1969

NUMBER 251

TABLES WITH NOTES ON  
CONSUMER EXPENDITURE

Section One

INTRODUCTION

1.1 This report<sup>1/</sup> contains some selected tables on the pattern of consumer expenditure for the year July 1968 - June 1969 for rural and urban population of the States and the Union Territories of India. The primary data were collected by interviewing members of the sample households through the Integrated Household Survey (Schedule 16), conducted in the 23rd Round of the National Sample Survey (NSS) during the year July 1968 - June 1969. This schedule has been canvassed since the 19th Round of NSS with a view to get an integrated picture of the household economy. The information collected from a sample household through this schedule of enquiry included data on (a) operation of household business (the production account), (b) disbursement of the household earnings for various living purposes (the consumption account) and (c) the investment behaviour of household (the investment account). In addition to this basic information some other related information on demography and employment were also collected in this schedule.

1.2 Geographical Coverage : The survey was extended over the whole of the rural and urban sectors of the Indian Union excepting : North-East Frontier Agency, Ladakh district of Jammu & Kashmir State; Mizo Hills (Lushai) district in Assam State; Pal and Samari Tehsil of district Surguja and Bijapur, Dantewara and Korta tehsils of district Bastar of Madhya Pradesh; Mao, Ukhrul and Tamenlong sub-divisions of the Union Territory of Manipur; the Union Territories of Andaman and Nicobar Islands and Laccadive, Minicoy and Amindivi Islands. In this round the work of NSS was also extended to Nagaland (urban sector only) including State participation for the first time.

1.3 Sample Size : The total number of sample villages for the rural survey was 8400 and a total of 4698 urban blocks were selected for the urban survey. The total numbers of sample households surveyed were 9116 and 9458 for the rural and urban areas respectively.

---

1/ The present report is a revised version of NSS D 251 (June 1974)

Section Two  
CONCEPTS AND DEFINITIONS

2.1 Some important concepts and definitions used for the enquiry are described in this section.

2.2 Household : A household is a group of persons normally living together and taking food from the same kitchen. A boarding house, a hotel or a hostel is treated as a cluster of households, where each individual boarder (with his dependents or guests) was considered as a separate household. Institutional population like inmates of jails, police quarters, cantonments, hospitals, asylums, relief camps are excluded from the scope of the enquiry.

2.3 Household member : Any person who took principal meal with the household for at least 16 days during a period of 30 days preceding the date of enquiry is considered to be a member of the household. Such a person may be the head of the household or a relation or a protégé of the head or an employee or a guest of the household.

2.4 Household size : The total number of members composing a household is the size of the household.

2.5 Vegetarian, non-vegetarian : Those who are not in the habit of consuming any item of flesh foods like meat, fish, eggs etc. is considered to be a vegetarian. Among the rest, persons who do not take meat & fish but take eggs are 'vegetarian taking eggs' and the other persons are non-vegetarians.

2.6 Consumption : The consumption data is strictly restricted to the non-productive consumption of the household including that of the pet animals (domestic animals which are not used for the household enterprise e.g., dog, cat, hare, parrot, peacock etc.) if any. But consumption by livestock of the household is for productive enterprise and as such are not included in the household consumption. However the livestock products like milk, meat, egg etc. consumed by the household is considered as household consumption and is also accounted for accordingly. While transfer payment in kind is not to be treated as consumption, consumption out of transfer receipt in kind like borrowing, gifts, charities, perquisites received by the household, free collection and other receipts in kind, if any, have to be considered.

2.7 Consumer Expenditure : The value of consumption out of transfer receipts and the value of receipt in exchange of goods and services is imputed at the average retail price prevailing in the locality during the reference period. Whereas the value of consumption out of homegrown stock is imputed by ex-farm (or ex-factory) price which is free from distribution cost or middleman's profit and other trade margins.

2.8 Tables in this report are presented for 22 broad groups of items. These groups and their respective constituents are :

<u>item group</u>	<u>constituent items</u>
1. cereals	rice, wheat, jowar, bajra, maize, barley, ragi, small millets and their products;
2. gram	bengal gram and its products ;
3. cereal substitutes	cereal substitutes like tapioca, pea etc.;
4. pulses	arhar (tur), gram (split grain), moong, masur, urd, khasari, pea, soyabean, other pulses and pulse products;
5. milk and milk products	milk (liquid), baby food (milk), milk-condensed powdered etc., ghee, butter, curd, other milk products;
6. edible oil	vanaspati, mustard oil, coccoanut oil, gingelly (til oil), groundnut oil, linseed oil, refined oil, other edible oil, oil seeds;
7. meat, egg & fish	goatmeat, mutton, beef, pork, buffalo meat, other meat, poultry, other birds, egg, fish (fresh), fish (dry);
8. vegetables	potato, onion, tomato, brinjal, cauliflower, root vegetables (arum, radish etc.) leafy vegetables, other vegetables;
9. fruits and nuts	banana, orange, lemon, mango, coccoanut, guava, pineapple, grapes, other fresh fruits, copra (coccoanut), groundnut, cashewnut, dates, raisin (kish-mish, manacca etc.), other dry fruits
10. sugar	sugar (crystalline), gur (cane), khandesari, sugar, sugar candy, sugar others;
11. salt	sea salt, rock and other salt;
12. spices	turmeric, black pepper, pepper, dry chillies, green chillies, garlic, tamariud, ginger, curry powder, other spices;
13. beverages, refreshments, etc	tea (prepared), tea leaf, coffee (prepared), coffee powder, other drinking beverages, biscuits, confectionaries etc., salted refreshments, prepared sweets, cooked meals, pickles, sauce, jam, jelly, other processed food;
14. food : sub-total	item groups 1 to 13 pooled;

<u>item group</u>	<u>constituent items</u>
15. pan, tobacco, intoxicants	pan leaf, pan finished, supari (betel nuts), other ingredients for pan, biri, cigarette, leaf tobacco, hookah tobacco, cheroot, snuff, <del>bardeh</del> ; kinam, surti, other tobacco products, opium, ganja, toddy, country liquor, foreign liquor, other drugs and intoxicants;
16. fuel & light	coke, coal, firewood, electricity, gas, dung cake, charcoal, kerosene, candle, matches, methylated spirit, other fuel and light;
17. clothings	clothings made of cotton (mill made, power loom, handloom khadi), wool, art silk, rayon or any other synthetic textiles, pure silk, others including items of bedding and upholstery;
18. footwear	leather boots, shoes, leather sandals, chappals, etc., other leather footwear; other footwear;
19. Miscellaneous goods & services	amusements (cinema, theatre etc.), education, medicine, toilet articles, sundry articles, r services, conveyance etc.;
20. rent	finer and penalties, house rent, garage rent, residential land rent, consumer rent (other goods);
21. taxes	consumer taxes, and cesses ;
22. durable goods	furniture, musical instruments, ornaments, utensils and other equipments and their repairing expenses including the maintenance of residential houses;
23. pet animals	domestic animals like dog, cat, hare, birds like parrot, pigeon, peacock etc.;
24. non-food ; sub-total	item groups 15 to 23 pooled.
25. total consumer expenditure	item 14 & 24 pooled.

Section Three  
SOME FINDINGS

3.1 The average size of a household that is, the average number of persons per household was found to be 5.25 in rural areas and 4.75 in urban areas in the twentythird round of NSS. It may be mentioned that in the previous round the average household size for the rural and urban areas were also of the same order. As has been observed in the earlier NSS rounds, both for rural and urban areas the average size of household exhibited a slow decreasing tendency with rise in per capita expenditure, excepting a few expenditure classes at the bottom and this tendency is more marked in higher expenditure classes.

3.2 Distributed under monthly per capita expenditure classes, the percentage of households in the four bottom expenditure classes (below Rs.15/-) was 8.76 in rural areas, 2.59 in urban areas and only 0.13 in cities. On the other hand in the four highest expenditure classes (Rs. 34/- and above) there were 38.24 per cent of the rural households, 64.64 per cent of the urban households and 87.32 per cent of households of the cities. With the passage of time the level of expenditure in money terms is rising with gradual increase in consumer prices. Hence, under the fixed set of monthly per capita expenditure classes (in rupees), the concentration of households is increasing at higher expenditure groups and gradually becoming thinner in the lower levels of expenditure. Percentage distribution of estimated number of households by monthly per capita expenditure classes, as shown in Tables (2/R), (2/U) & (2/C) on pages 15, 68 and 122 for rural, urban and cities respectively.

3.3 It was noted in an earlier NSS report<sup>1/</sup> that since 1961 (NSS 17th Round) there was an appreciable decline in the proportion of households in the expenditure level below Rs. 21/- per capita per month in the rural areas. In the other two broad expenditure levels of Rs. 21/- to below Rs. 43/- and Rs. 43/- and above, the proportions of households had appreciably gone up. This observation indicated a gradual shift towards right and it was further observed that the households entering in the middle group from the lowest one outnumbered those leaving the middle group and entering into the highest one. Thus the middle expenditure group Rs. 21/- to Rs. 43/- was swelling till the NSS 22nd round but in the 23rd Round a fall by one percentage point in the upper expenditure level and a compensating rise of two percentage points in the lowest expenditure class was observed.

---

<sup>1/</sup> Tables with Notes on Consumer Expenditure, The National Sample Survey Twentyscond Round, Number 237 (Draft).

3.4. In Table (1), the average size of household and percentage distribution of households by monthly per capita expenditure classes in rural and urban areas are shown for the NSS 22nd (July 1967 - June 1968) and 23rd (July 1968 - June 1969) rounds. The observed trend in the percentage distribution of households by monthly per capita expenditure level was however more or less maintained in the urban areas. Considering the three / <sup>broad</sup> expenditure classes of (i) below Rs. 21/-, (ii) Rs. 21/- to below Rs. 43/- and (iii) Rs. 43/- and above, it is found from the available results for a few earlier NSS rounds that while the percentage in the middle expenditure group remained almost stationary at a level of 40-42, in the first group it recorded a fall of about 23 percentage points to come down to 10.10 and almost equally augmenting its value to 49.27 in the third group from the NSS 17th to the NSS 23rd Round. For the cities, the percentage distribution of households by per capita expenditure level in NSS 22nd and 23rd Rounds did not show any significant difference.

3.5. Percentage distribution households under three broad monthly per capita expenditure classes are shown for a few NSS rounds in Table (2).

TABLE (1) : AVERAGE SIZE OF HOUSEHOLD AND PERCENTAGE DISTRIBUTION OF HOUSEHOLDS BY MONTHLY PERCAPITA EXPENDITURE CLASSES IN RURAL AND URBAN AREAS; NSS 22ND & 23RD ROUNDS

3.6 Vegetarian, non-vegetarian <sup>2/</sup>: Percentage distribution of estimated number of non-vegetarian persons, vegetarian persons taking eggs and other vegetarian persons for rural urban and cities are given in Tables (5/R), (5/U) & (5/C) respectively of Appendix I. Considerable amount of variation obtains in the food habits of the population belonging to different states. In the rural areas, for example, the proportion of non-vegetarian population was about 90 per cent in West Bengal whereas the corresponding percentage in Gujarat was only 33. The proportion of non-vegetarian population in Kerala, Jammu & Kashmir, Orissa, Tamil Nadu and Andhra Pradesh was high (of the order of 80 percent or more). More than 50 per cent of the population of Gujarat, Haryana and Rajasthan, on the other hand, were vegetarians. In urban areas, as expected, the pattern was almost similar. In Tamil Nadu and West Bengal although the non-vegetarian proportion was quite high in rural areas, it dropped down to lower values in the respective metropolitan cities (Madras and Calcutta). Maharashtra rural had a relatively

<sup>2/</sup> The number of sample units surveyed in the Union Territories were generally all. Hence in the discussions the results for those have not been taken to consideration.

lower proportion of non-vegetarians and this proportion registered a further sharp decline in Bombay city. While the difference in the proportions for West Bengal rural and Calcutta was not very large, the gaps between the proportions of non-vegetarians for the rural population and metropolitan city population of Tamil Nadu and Maharashtra were of significantly high order. This large difference might have arisen due to larger influx of population in the metropolitan cities from other states with preponderance of vegetarian population. Or due to movement of selective groups of population from rural areas of a state to its metropolitan city.

3.7 Consumer expenditure on food and non-food items ; In the rural areas of India, the consumer expenditure on food items per capita per month increased from Rs. 14.93 in the NSS 17th Round to Rs. 25.83 in the 22nd and it decline by about a rupee to 24.70 in the 23rd Round. On non-food items the increasing trend in expenditure was almost similar and it was maintained from 22nd to 23rd round also. Along with this, the increasing trend of the expenditure on food items expressed as percentage to total expenditure is also worth noting. While in NSS 17th Round this percentage was 68.78 and went on increasing in the subsequent rounds to reach a peak of 77.34 in 22nd, it recorded a fall to 74.20 in the 23rd Round. For urban areas the rising trend of expenditure on food to total expenditure was more or less maintained althrough the 17th to 23rd Rounds. The percentage of expenditure on food was slightly higher than 66 percent in NSS 22nd and 23rd rounds. In cities the total per capita monthly expenditure was found to be Rs. 66/- in NSS 22nd and Rs. 76/- in NSS 23rd Round. The percentage of expenditure on food items to total consumer expenditure was however of the same order (61 percent) in both the rounds.

TABLE (3) : CONSUMER EXPENDITURE (Rs. 0.00) PER PERSON PER MONTH ON FOOD AND NON-FOOD ITEMS AND PERCENTAGE OF EXPENDITURE ON FOOD TO TOTAL EXPENDITURE IN RURAL AND URBAN AREAS FOR SIX NSS ROUNDS

NSS Round	r u r a l				u r b a n			
	expenditure on				expenditure on			
	f o o d		non-food	total	f o o d		non-food	total

22nd (July '67 - June '68)	25.83	77.34	7.57	33.40	29.82	66.53	15.00	44.82
23rd (July '68 - June '69)	24.70	74.20	8.59	33.29	30.58	66.42	15.46	46.04

3.8 The per capita net availability of food grains per day in India was found to be 437 grams in 1968-69 (agricultural year) which was less than the corresponding quantity available in the year 1967-68 (452 grams).<sup>3/</sup> Production of food grains in 1968-69 was about a million tonne less than the previous agricultural year's and it was also lower in 1968-69 for pulses and oil seeds. In fact, the index number of agricultural production recorded a slight fall in 1968-69. There were indications of similar decline in the general index number of wholesale prices. Fall in prices from the year 1967-68 to the year 1968-69 in rice, pulses, gur and tea were also quite apparent.<sup>4/</sup> This fall in production of food items and the decline in the prices<sup>for</sup> the major food items might have be reflected in the observed fall in monthly per capita consumer expenditure and the observed diminution of the proportion of expenditure on food to total expenditure in rural areas in 1968-69 as compared to those for the previous year.

<sup>3/</sup> Report on Currency and Finance, Reserve Bank of India 1971-72, Table 3, p.19

<sup>4/</sup> Ibid Observed from the graphs presented in the Report.

3.9 The average number of persons per household by monthly per capita expenditure classes are shown for rural, urban and cities in Tables (4/R), (U) and (4/C) on pages 17, 70 and 123 respectively. In the rural areas, Tamil Nadu recorded the smallest household size of 4.31 and Haryana the biggest of 6.41. The biggest and smallest average household size in urban areas were respectively 5.98 for Jammu & Kashmir and 3.29 for Himachal Pradesh.

3.10 The total per capita/monthly expenditure and the per capita monthly expenditure on food for the rural areas were found to be the lowest in Orissa (Rs. 28.24 & Rs. 22.50) and the highest in the Punjab (Rs. 56.56 & Rs. 38.46). In the urban areas the corresponding lowest and highest expenditure levels were recorded for Kerala (Rs. 38.39 & Rs. 26.06) and Assam (Rs. 55.39 & Rs. 37.39) respectively. In rural areas the percentage of expenditure on food to total expenditure was 80.17 in West Bengal and 63.85 in Kerala and these are the two extreme values. For the urban areas the range of variation of the corresponding percentages was 73.86 for Gujarat on the higher side and 63.48 for Maharashtra on the lower. The differentials over the states in the 23rd Round were by and large the same as that observed for the 22nd Round. The following Table (4) shows that per capita monthly consumer expenditure, expenditure on food and percentage of expenditure on food to total expenditure in rural and urban areas of different states of India.

TABLE (4) : PER CAPITA MONTHLY CONSUMER EXPENDITURE, EXPENDITURE ON FOOD AND PERCENTAGE OF EXPENDITURE ON FOOD TO TOTAL EXPENDITURE IN RURAL AND URBAN AREAS; NSS 23RD ROUND

Appendix II

SAMPLING DESIGN AND ESTIMATION PROCEDURE

II.1 The general sampling design is stratified with two-stage selection within each stratum; the first stage units being villages/blocks in rural/urban areas and the second stage units the households. The first stage units within each stratum were selected circular systematically with probability proportional to size, the measure of the size being related to the population and the households were selected linear systematically. The sample design was made self-weighting at state level both in rural and urban areas. The sample villages and blocks had been selected in the form of independent and interpenetrating sub-samples. Sub-samples 1 and 3 were surveyed by one party of investigators and sub-samples 2 and 4 by another party.

II.2 Sample Size : The total sample size for all socio-economic (SE) enquiries in the rural area was 3400 sample villages. The sample size for SE enquiries in the urban area was 4698 sample blocks. The survey period (one year) of this round was divided into 6 sub-rounds of duration two months each for both the rural and the urban areas.

Rural Sampling Scheme

II.3 Sampling Frame : The frame used for selection is the list of villages as per 1961 population census. Though the unit of selection is the census village, the unit of survey was taken as the revenue village(s) corresponding to the sample census village.

II.4 Stratification : The country had been divided into 64 regions by grouping, within each state or Union Territory, districts having similar population density and crop pattern. Strata were formed within each region by grouping contiguous tohsils having similar population densities and altitudes having good transport and communication facilities amongst them, as far as possible. Formation of strata was such that the sum of the size measures of the villages for each stratum of a state/Union Territory was the same. The size of a village is the ratio of its population to the average population of villages in the population class 0-499 of that state, rounded off to a suitable integer. The number of strata to be formed in a state was obtained as the ratio of the state allocation to 24 and the total size measure of a stratum was given by the ratio of the total size for the state to the number of strata for equalising the stratum sizes and making

then multiples of 12 the sizes of some villages had been suitably increased or reduced without however deviating much from their original sizes.

II.5 Allocation : The allocation of the total sample size of 8400 villages to the states was based on a joint consideration of their rural population, area under cereal crops and investigators available. All strata had the same allocation viz., 24 sample villages.

II.6 Selection of Households : The households in a sample village/hamlet group were arranged in 4 classes on the basis of household size (upto 4, and 5 & above) and means of livelihood code. The means of livelihood codes were self-employed in agriculture-1 and others-2. After arranging the households in the specified manner, a linear systematic sample of households was selected to form the 'combined sample'. From this combined sample, a sample was selected systematically for schedule 16 with the interval 16.

#### Urban Sampling Scheme

II.7 Sampling Frame : The sample design was stratified two-stage with urban blocks as the first-stage units and households as the second-stage units. The UFS (Urban Frame Survey) frame and the list of 1961 census blocks had been used as the sampling frame.

II.8 Stratification : In each State/Union Territory, towns with population less than 50,000 formed stratum 1 and the remaining towns and cities (except the 4 big cities - Bombay, Calcutta, Delhi & Madras) formed stratum 2. Each one of the big cities formed a stratum 3 of the respective state. The total number of strata was 44.

II.9 Allocation : The total sample size of 4698 blocks (central sample) had been allocated to the states in proportion to their 1961 census urban population. The allocation had been modified to ensure a minimum of 144 blocks in each state (with the exception of Punjab and Haryana where there were only 96 and 72 blocks respectively) and rounded off to multiples of 24 with Union Territories having smaller sample size. In finalising the allocation the available investigator strength and rural work load in each state had also been kept in view.

II.10 Selection of Blocks : The blocks within each stratum had been selected circular systematically with probability proportional to size (pps), the size of each block was its estimated population (as in the UFS frame) rounded off to the next multiple of 1000. The blocks were selected in the form of 4 independent interpenetrating sub-samples.

II.11 Selection of Households : From each sample block/sub-block, a combined sample was selected linear systematically with the interval and random start specified in sample list, after arranging all the households in it into 4 classes by some specified combination of employment status (unemployed, self-employed, others) and household size (upto 3, and 4 & above). From the combined sample, selection of households for schedule 16 was linear systematic with the interval 8.

Estimation Procedure

II.12 Notations :

- s** : subscript for s<sup>th</sup> stratum .
- i** : subscript for i<sup>th</sup> sample village/block/selected part of village or block
- j** : subscript for j<sup>th</sup> sample household
- k** : number of strata in the state
- n<sub>s</sub>** : number of sample villages/blocks selected in a stratum and in a sub-sample for the whole round
- h** : number of households selected for the enquiry
- y** : value of the characteristic.
- Y** : estimate of the state total for the characteristic from a sub-sample
- M** : constant multiplier

II.12 Estimates :

For Rural Area

$$Y = M \sum_{s=1}^k \sum_{i=1}^{n_s} \sum_{j=1}^{h_{si}} y_{sij}$$

For Urban Area

$$Y = M \sum_{s=1}^k \sum_{i=1}^{n_s} \sum_{j=1}^{h_{si}} y_{sij}$$
