REPORT ON THE THIRD QUINQUENNIAL SURVEY ON
EMPLOYMENT AND UNEMPLOYMENT
(Survey Results : All India)

Section One

INTRODUCTION

1.1 The National Sample Survey Organisation (NSSO) carried out the third quinquennial survey on employment and unemployment as a part of its 38th round (January - December 1983) survey operation. The first survey on employment and unemployment in this quinquennial series was conducted during September 1972 - October 1973 (27th round). For this survey, a new conceptual frame work was formulated taking into consideration the basic recommendations of the 'Expert Committee on unemployment Estimates' (1970). For the second survey in the series carried out during July 1977 - June 1978, though the basic conceptual frame remained essentially the same as that of the first, a few important changes were, however, made in regard to (i) definition of 'usual status' for classification of the population based on an objective 'time spent' criterion and (ii) structure and content of the probing questions included in the survey. In addition, the survey attempted to collect data on the subsidiary gainful status, if any, of persons having principal usual status as 'not working', according to the 'time spent' criterion. Thus, the 32nd round survey could throw up the estimates of two categories of usually 'employed' - those working in the principal status and those working only in a subsidiary status. With a view to obtaining results comparable to that of the 32nd round survey, for the third survey carried out during the calendar year 1983, the same frame-work as that of the 32nd round survey was adopted without any change. In other words, the 38th round survey was a no change model compared to the 32nd round survey.

1.2 Results presented : Pending generation of detailed results, a set of tables relating to some key characteristics have been generated on a priority basis from the data collected during the first two sub-round period (January - June 1983) to meet the urgent need of some important information within a short period after the completion of the survey. The key results based on this priority

tabulation and the comparable results based on NSS 27th and 32nd round surveys, for all India and the different states/Union Territories, have been released in mimeographed report form ^{1/} and subsequently in the NSSO journal ^{2/}. The present report gives the results for all-India based on the detailed tables relating to 'employment and unemployment' generated from all the four sub-round data of NSS 38th round survey. The report also gives the key indicators of 'employment' and 'unemployment' for the different states and Union Territories. The detailed results for the states and Union Territories will be released subsequently.

1.3 Contents of the report : This report in section - 2, gives briefly the scope, coverage and sample design of the 38th round survey. ~~are given in prior, in section - 2 of this report.~~ Salient features of the conceptual frame work and data collection procedure adopted for the round are described in section - 3. Important summary results are presented in sections 4-9. The detailed tables are presented in the Appendix.

1/ Key results of last three quinquennial NSS enquiries on employment and unemployment (Report No. 315)

2/ Sarvekshna, Vol. IX, No.4

Section Two

SCOPE, COVERAGE AND SAMPLE DESIGN

2.1 Geographical Coverage : The 38th round survey covered the whole of Indian Union excepting, (i) Ladakh and Kargil districts of Jammu & Kashmir and (ii) rural areas of Nagaland. The report, however, also excludes the results relating to Arunachal Pradesh and Lakshadweep.

2.2 Sample Design : A stratified two stage sample design was adopted for the survey with the first stage units as census villages for rural areas and urban blocks (urban frame survey) for urban areas. Households formed the second stage units in both rural and urban areas. Sample villages were selected with probability proportional to size (population) and with replacement in the form of two independent interpenetrating sub-samples (IPNS). Sample blocks were selected with equal probability, also in the form of two IPNS. From each first stage unit, 10 sample households were selected circularly systematically as second stage units after arranging all the households of a first stage unit in a specified manner.

2.3 Stratification : States were first divided into 77 agro-economic regions which were groups of contiguous district, similar with respect to population density and crop pattern. In Gujarat, however, some districts were split in consideration of the location of dry areas and the distribution of tribal population in the state. Within each region basic strata were formed so that they did not cut across districts. Each district with less than 1.8 million rural population, according to 1981 census, formed one basic stratum by itself. A district with more than 1.8 million population was divided into two or more basic strata depending on its rural population by grouping contiguous tehsils (sub-divisions in Bihar, Orissa and West Bengal) homogenous, as far as possible, with respect to rural population density and crop pattern. (In Gujarat, however, in the case of some districts which extended over more than one region, even if the rural population was less than 1.8 million, the part of the district falling in each region constituted a separate stratum). The basic strata thus formed served as the ultimate

strata for sampling in rural areas. As regards the urban sector, in each State/Union Territory, the cities and towns were divided into four population classes on the basis of their 1981 census population. The classes were (i) less than 50,000, (ii) 50,000 - 199,999, (iii) 200,000 to 999,999 and (iv) 1,000,000 and above. In the first of the three classes, each population class within each NSS - FOD sub-region formed an urban stratum. As for the highest class that is, the metropolitan cities, each city belonging to the class constituted a stratum by itself.

2.4 Allocation of samples : A total all-India sample of about 13,170 first stage units were first allocated to each State/Union Territory in proportion to the net investigator strength of FOD. This was further allocated to rural and urban sectors within each State/UT considering the relative sizes of its rural and urban population. All state allocations were rounded off to multiples of 8 to have equal sample sizes for four sub-rounds of two sub-samples into which the total sample was divided. The rural/urban allocations at state level were reallocated to strata in proportion to their rural/urban population ensuring that the region level allocations were multiples of 8.

2.5 Survey period and sub-round formation : The survey was started in the month of January 1983 and was completed in December 1983. The entire survey period of one year was divided into four sub-round periods of three months' duration coinciding approximately with the four agricultural seasons. The four sub-round periods were

sub-round 1	: January - March 1983
sub-round 2	: April - June 1983
sub-round 3	: July - September 1983
sub-round 4	: October - December 1983

The samples were distributed over the four sub-rounds in a manner so as to provide equally valid estimates for the country for each of the sub-round periods separately.

2.6 Sample size : In all, the survey covered about 1.2 million households over about 8600 sample villages and 4500 sample blocks. Table (0) gives the distribution of sample villages/blocks allotted and the number of sample households and population surveyed for each state and Union Territory, the results of which are included in the present report.

Table (0) : Number of villages/blocks allotted and number of sample households and persons surveyed.

* Excludes Arunachal Pradesh and Lakshadweep. Rural areas of Nagaland was not covered in the survey.

2.7 Estimation procedure : The estimation procedure adopted in the NSS 38th round is based on a weighted sum of the sample values. Denoting by \hat{Y} the un-biased estimate of Y (the state/region total of any variate), it is given by :

$$\hat{Y} = \sum_s \frac{P_s}{n_s} \sum_i \frac{D_{si}}{P_{si} \times e_{si}} \times \frac{H_{si}}{h_{si}} \sum_j Y_{sij} \dots\dots\dots(1)$$

for the rural sector except Arunachal Pradesh and

$$\hat{Y} = \sum_s \frac{N_s}{n_s} \sum_i D_{si} \times \frac{H_{si}}{h_{si}} \sum_j Y_{sij} \dots\dots\dots(2)$$

for the urban sector as well as for rural sector of Arunachal Pradesh, where

s, i and j are suffixes for stratum, village/urban block and household respectively;

P_s , N_s and n_s give the stratum values of selection population, number of villages/blocks in the frame and number of sample villages/blocks respectively;

D_{si} , e_{si} , P_{si} respectively for, number of hamlet-groups/sub-blocks formed, number of census villages contained in a larger revenue village actually surveyed and the selection population of the sample village;

H_{si} and h_{si} stand for the total number of households listed and the number of sample households; and Y_{sij} is the observed value of the variate of a sample household.

Sub-sample-wise (also sub-round-wise) estimates of Y are obtained by restricting the summation (\sum_e) to units belonging to the concerned sub-sample with n_s representing the number of such units.

Estimates of ratios such as percentages, averages etc., are obtained by first calculating the unbiased estimates of the numerators and denominators concerned and then by division.

Section Three

SALIENT FEATURES OF THE CONCEPTUAL FRAME AND PROCEDURE OF DATA COLLECTION

3.1 The primary objective of the NSSO quinquennial surveys on employment and unemployment is to measure the extent of 'employment' and 'unemployment' in quantitative terms disaggregated by different population characteristics, such as, age, sex, education, etc., for different geographical regions. With a view to meeting this objective, attempts are made in the surveys to classify the population of age 5 years and above as belonging to different activity categories adopting three different approaches of classification on the basis of the activities pursued by them during specified reference periods. The three approaches are :

- (i) usual status approach with a reference period of 365 days preceding the date of survey,
- (ii) current week status approach with a reference period of 7 days preceding the date of survey and
- (iii) current day status approach with each day of the 7 days preceding the date of survey as the reference period*.

The various activity categories used in the 32nd and 38th round surveys were as under.

working (or employed)

<u>code**</u>	<u>description</u>
	<u>working (or employed)</u>
01-04	working with an employer under obligation but work not specifically compensated by any wage/salary
11	worked (self-employed) in household enterprises
21	worked as helper in household enterprises
31	worked as regular salaried/wage employee
41	worked as casual wage labour in public works
51	worked as casual wage labour in other types of work
61	did not work though there was work in household enterprise
71	did not work but had regular salaried/wage employment

* In this approach, strictly speaking, classification of person days and not persons which has been attempted.

** Codes 61, 71, 82 and 99 were applicable only in the case of current week and day status approaches.

not working but available for work (or unemployed)

- 81 sought work
- 82 did not work but was available for work
- neither working nor available for work (or not in labour-force)
- 91 attended educational institutions
- 92 attended domestic duties only
- 93 attended domestic duties and was also engaged in free collection of goods (vegetables, roots, fire-wood, cattle feed, etc.), tailoring, weaving, etc., for household use
- 94 too young to work/to attend school/to seek employment
- 95 old and disabled
- 96 rentiers, pensioners, remittance recipients, etc.
- 97 beggars, prostitutes, etc.
- 98 others
- 99 did not work due to temporary sickness (for casual workers only)

Persons reported to be engaged in any one or more of the activities listed under the category codes 01-71 (01-51) for usual status) during the specified period were considered 'working' (or employed). A person assigned the activity category code 81 ^(81 for usual status) or 82 was considered 'seeking and/or available for work' (or unemployed). The two together constituted the 'labour force'. Any person reported to be engaged in one or more of the activities under the category codes 91-99 ^(91-98 for usual status) was classified as 'not in labour force'.

3.2 THE CONCEPTS

(a) Classification according to usual status approach : In the 38th round survey, the status of activity on which a person spent relatively longer time of the preceding 365 days prior to the date of survey was considered the principal usual activity status of the person. Accordingly, a person's principal usual status was considered 'working' (or employed), if he/she was engaged relatively for a longer time during the reference period of 365 days in any one or more ^{work} activities viz., activities coded 01-51, 'seeking or available for work' (or unemployed), if he/she was not working but was either seeking or was available for work (activity code 81) for a relatively longer time of the specified reference period and 'not in labour force', if he/she was engaged

for a relatively longer period in any one or more of the non-gainful activities (activities coded 91-98). Within the two broad activity categories, 'working' and 'not in labour force', the detailed activity category was determined on the basis of time spent criterion. A person categorised as a 'worker' on the basis of his/her principal status is referred to hereinafter as 'principal status worker'. Those of the 'non-workers' who pursued in a subsidiary capacity some gainful activity as well along with their principal usual activity (non-gainful) were considered to be usually working in a subsidiary capacity and are hereinafter referred to as 'subsidiary status worker'. These two groups viz., 'principal status workers' and 'subsidiary status workers' together constitute 'all workers' according to the usual status classification. The same concept was adopted in the NSS 32nd round also for classification of population according to usual status. In the 27th round survey, however, for a person, his or her activity which dominated for a long period of time in the past (say, one year or so) and which also was likely to continue in the future was considered as his/her usual activity. Accordingly, a person was considered 'working' if he/she was pursuing any gainful activity for a long period in the past, say one year, which was likely to continue in the future also. Even persons (excepting full time regular students) who were pursuing gainful activities marginally only were considered as workers. Thus, the estimates of usual 'workers' based on the 27th round data included both the categories of workers, those pursuing gainful activities in the principal capacity and those pursuing gainful activities in the subsidiary capacity or in other words, both 'principal status' and 'subsidiary status' workers. The estimates of workers - principal and subsidiary taken together - as obtained from the 32nd and 38th rounds would, thus, be comparable with the estimates of 'workers' as obtained from the 27th round.

(b) Classification according to current week status approach : For classification of persons according to current week status, he/she had to be initially assigned a unique activity status with reference to a period of 7 days preceding the date of survey. This posed no problem in the case of persons having only one status during the reference week. But, classification of persons, pursuing more than one activity during the week, under a unique status was made by adopting a priority-cum-major time rule. Under the priority

rule, the status of 'working' got priority over the status of 'not working but seeking/available for work' and the status of 'seeking/available for work' got priority over the status of 'not working and not seeking/not available for work'. But for classification of a person categorised according to the priority criterion under the broad status category 'working' or 'not working' the detailed activity category status which would be assigned to the person was determined by major time criterion, i.e., the detailed activity category on which major time was spent was considered his/her current-week status. Thus, a person was considered 'working' (or employed) if he was engaged in any one or more of the gainful activities (01-71) at least one hour on any one day of the reference week and was assigned that out of the different gainful activities (01-71) on which his major working time was spent during the reference week. A person who had not worked for at least one hour on any one day of the week, but had been seeking work or had been available for work (although not seeking) at any time during the week was considered 'seeking/available for work' (or unemployed). Others were considered 'not available for work' (or not in labour force). Each member of the sample household was, thus, assigned a unique activity status for the week. Aggregates of persons under the different activity status thus assigned provided the distribution of persons by activity on an average in a week of the survey period of one year.

(c) Classification according to current day status approach* :

The activity pattern of the population particularly in the unorganised sector is such that a person might be pursuing more than one activity during a week and sometimes even during a day. Many people - particularly women - might undertake non-gainful work in their household enterprises along with other non-gainful activities, thus, pursuing both gainful and non-gainful activities on the same day. According to 'current day status approach', therefore, each person was assigned one single activity status or two at the most on each day of the reference week depending on whether he had been pursuing one or more than one activity on each of the seven days of the reference week. The unit of classification was, thus, 'half day' according to 'current day status' approach. In assigning the activity status on a day, a person was considered

* This was termed 'labour time disposition' in the 27th round.

'working' (employed) for the entire day if he had worked 4 hours or more on the day. But if he worked one hour or more but less than 4 hours, he was considered 'working' (or employed) for half day and 'seeking/available for work' (unemployed) or 'not available for work' (not in labour force) for the other half of the day depending on whether he was seeking/available for work or not, on the day. On the other hand, if a person was not engaged in any 'work' even for one hour on the day but was seeking or available for 'work' for four hours or more he was considered 'unemployed' for the entire day. But if he was available for 'work' for less than four hours only, he was considered 'unemployed' for half day and 'not in labour force' for the other half of the day. A person who was having neither any 'work' to do nor was available for 'work' even for half of the day was considered 'not in labour force' for the entire day and assigned the one or two of the non-gainful activity statuses which he had during the day. The aggregate of persons classified under the different activity categories for all the seven days of the week divided by seven would give the distribution of persons (strictly, person-days) by activity category on an average day over the survey period of one year.

(d) Classificatory characteristics : In order to study the employment-unemployment pattern for disaggregated homogenous population, data on various household characteristics such as, land possessed, per capita monthly expenditure, household industry occupation, household type, household group, etc., and person characteristics like sex, age, education, residence status, etc., were also collected in the survey, in addition to the data on the activities pursued for classification of the population as mentioned in the earlier paragraphs.

(e) Probing questions : In the 38th round survey there were two sets of probing questions, the first set to be put to all persons of age 5 years and above excepting those categorised usually as old, disabled, etc., and the other set for those categorised as usually engaged in household duties. Through the first set, it was aimed to get data to understand the complex dimensions of the work pattern and the extent of underutilisation of available labour time. The second set was aimed to bring out the extent of participation of women engaged in household duties in

some specified activities which derive benefits to their households, availability for work in the household premises, etc. A number of suitable questions were, therefore, included in the 38th round, the answers to which, it was expected, will bring out the desired information.

3.3 DEFINITIONS

(a) Gainful activity : Gainful activity (or work) is the activity pursued by persons for pay, profit or family gain or in other words, the activity which adds value to the 'national product'. Normally, it is an activity which results in production of 'goods and services' for exchange. However, the activities in 'agriculture' (i.e., all activities relating to industry div. 0) in which the part or the whole of the agricultural production is used for own consumption and does not go for sale, are also considered 'gainful'. Execution of household chores or social commitments, etc., however, are not considered 'gainful' activities. The activities, such as, prostitution, begging, etc., which may result in earnings, are, by convention, not considered 'gainful'.

(b) Workers (or employed) : Persons engaged in any gainful activity are considered 'workers' (or employed). They are ^{the} persons pursuing any one or more of the eight situations listed as the activity categories under the first broad activity category, i.e., 'working or employed' in para 3.1.

(c) Seeking or available for work (or unemployed) : Persons who, owing to lack of work, had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or making applications to prospective employers or expressed their willingness or availability for work under the prevailing conditions of work and remuneration, are considered unemployed.

(d) Labour force : Persons categorised as working (or employed) and categorised as seeking or available for work (or unemployed) together constitute the labour force.

(e) Not in labour force : Persons categorised neither 'working' nor 'seeking or available for work' are considered to be engaged

in non-gainful activities and categorised 'not in labour force'. The persons falling in this category are students, those engaged in domestic chores, rentiers, pensioners, those living on alms, remittance recipients, etc., infirm and disabled persons, prostitutes and smugglers, etc.

(f) Worked (self-employed) in household enterprise-usual and current status category 11 : Persons who are engaged in their own farm or non-farm enterprise are defined as self-employed - the term used to designate their activity status. There are different kinds of self-employed. Some may operate their enterprise without hiring any labour. Some others may normally work in their own enterprise but occasionally hire a few labourers. There is also a third category who, by and large, regularly run their enterprises by hiring labour. The first two groups of self-employed are called own-account workers and the third, employers.

(g) Worked as helper in household enterprise-usual and current status category 21 : The helpers are a category of working persons who keep themselves engaged in household enterprises, working full or part time and do not receive any cash payment in return for the work performed or any share of the family earnings from the enterprises. They are household members, a large number of them being nearly or distantly related to the household head and others may be unrelated but nonetheless they are dependant members of the household who work for the family enterprise and are given food and shelter like other members of the household. One may also come across persons in a household who do not receive any cash remuneration for their work in the household enterprise but have a share in the family earnings out of such enterprise. Such persons are not 'helpers' but 'self-employed'.

(h) Worked as regular salaried/wage employees-usual and current status code 31 : Persons working in others' farm or non-farm enterprises (both household and non-household) and getting, in return, salary or wages on a regular basis (and not on the basis of daily or periodic renewal of work contract) are treated as regular salaried/wage employees. The category, salaried/wage

employees will include not only salary and wage earners getting time wage but also earners getting piece wage or salary and paid apprentices, both full time and part time.

(i) Worked as casual wage labour - usual and current status codes 41 & 51 : Persons engaged in others' farm or non-farm enterprises (both household and non-household) and getting in return wages according to the terms of the daily or periodic work contract are treated as casual wage labour. In the rural areas and also in the Government project sites, a type of casual labourers can be seen who normally engage themselves in public works activities which will include works taken up by the Government or local bodies for construction of roads, bunds, digging of ponds, etc., as test relief measures/employment generation schemes, etc. The casual labourers doing only such public work activities are casual labour in public works. The rest are casual wage labour in other types of work.

(j) Had work in household enterprises but did not^{work} - current status codes 61, and had regular salaried/wage employment but did not work - current status code 71 : Persons engaged in household farm or non-farm enterprises or working in others' farm or non-farm enterprises as salaried/wage employees but absenting from work temporarily due to sickness or for enjoying leave or holiday or for other reasons belong to these two categories 61 & ~~71~~ respectively depending on whether they are self-employed in household farm/~~non-farm~~ enterprises or employed in others' farm/~~non-farm~~ enterprises as wage/salaried employees.

(k) Attended domestic duties and was also engaged in free collection of goods, sweing, tailoring, weaving, etc. for household use - usual and current status code 93 : In the rural areas in general and particularly in the tribal areas, domestic work usually will also involve lot of work for free collection of vegetables, roots, firewood, etc., and also spinning and weaving of cloth for household requirement. ~~XXXX~~ Persons found to be spending regularly some of his/her time in performing the above mentioned activities along with house chores, belong to this category.

Section Four

CHARACTERISTICS OF THE HOUSEHOLDS AND THE POPULATION

4.1 Estimates of households and population : With a view to meaningfully correlate the employment and unemployment indicators, the necessary back-ground information relating to households and population is presented in this section. The 38th round survey has estimated the households and population of rural India (excluding Nagaland, Arunachal-Pradesh and Lakshadweep) at 100.5 and 521.4 million respectively. The estimates for urban India (excluding Arunachal Pradesh and ~~Lakshadweep~~ Lakshadweep) are about 34 million households and 162.3 million persons. Table (1) gives the estimated number of households and population (by sex) for all-India and different States/Union Territories.

4.2 Distribution of households and population by size class of land possessed : In India, particularly in rural areas, agriculture and agriculture based industries are the main sectors of employment. Obviously, land area possessed and cultivated by the households will indicate their employment potential. The results have revealed that during 1983, 6 percent of the rural households accounting for about 4 percent of the rural population and 36 percent of the urban households accounting for about 29 percent of the urban population possessed only less than half a cent of land area (including homestead area). Of them, while about 57 (3.54 as % to 6.19) percent of the rural households owned the homesteads, only about 21 (7.43 as % to 36.22) percent of the urban households claimed ownership of the possessed homestead. In the rural areas almost one third of the households possessed 1-5 acres of land and nearly 8 percent of the households possessed 10 acres or more of land. About 36 percent of the households possessed only less than 50 cents of land. In the urban areas a little over 50 percent of the households possessed only between 1-50 cents of land.

Table (2) gives the distribution of households and population by size class of land possessed.

4.3 Distribution of households and population by household type : The nature and type of work from which a household derives its major income, essentially indicate the activity pattern of the household members. A distribution of households by its major activity (referred to as household type), therefore, is an important background information for studying the activity pattern of the population. For the purpose, in the 38th round survey, the rural households were divided into five household types, namely, (i) self-employed in agriculture, (ii) self-employed in non-agriculture, (iii) agricultural labour, (iv) other labour and (v) others. This was done in two stages. In the first stage

* Figures in parentheses indicate the corresponding percentages as obtained from NSS 32nd round.

contd... //-

the households were categorised into three types - 'self-employed in non-agriculture', 'rural labour' and 'others' on the basis of the income derived by each household during the 365 days preceding the date of survey from gainful occupations. Accordingly, a household was categorised as 'self-employed in non-agriculture' if the household income from 'self-employment' in non-agricultural occupations was more than the income derived from 'wage paid manual labour' as well as the income from 'other' gainful sources, comparison being made independently. If the household income from 'wage paid manual labour' was more than the income derived from 'self-employment' as well as the income from other occupations taken separately, the household was categorised as 'rural labour household'. The remaining households were grouped as 'other households'. In the second stage of classification, the households categorised as 'self-employed in non-agriculture' in the first stage were treated as such. Of the households initially classified as 'rural labour', those which derived 50 percent or more of their income from wage paid manual labour in agricultural activities were labelled as 'agricultural labour households' and the rest as 'other labour households'. Similarly, of the households initially categorised as 'other households', those which derived 50 percent or more of their income from self employment in agricultural activities were classified as 'households self-employed in agriculture' and the rest as 'others'. The urban households were categorised as 'self-employed' and 'others'. Households which derived 50 percent or more of their income (from gainful occupations) from 'self-employment' were classified as 'self-employed' households and the rest as 'others'. Table (3) gives the distribution of households and population by type of household as defined above.

Table (3) : Percentage distribution of households and population by household type

all-India

household type	rural		urban	
	house-holds*	popula-tion	house-holds*	popula-tion
(1)	(2)	(3)	(4)	(5)
<u>households self employed in :</u>				
agriculture	40.72(46.11)	46.12	x	x
non-agriculture	11.70(10.60)	11.80	x	x
self-employed hhs.	52.42(56.71)	57.92	32.66(33.48)	38.52
agricultural labour hhs.	30.70(29.88)	27.68	x	x
other labour hhs.	6.57(6.53)	6.10	x	x
total-rural labour hhs.	37.27(36.76)	33.78	x	x
other hhs.	10.31(6.53)	8.30	67.34(66.52)	64.48
all households	100.00	100.00	100.00	100.00

The NSS 38th round results have revealed that while about 41 percent of the rural households derived major part of their annual income from self-employment in agricultural occupations, about 31 percent of the rural households depended mainly on manual labour in agriculture during the 1982-83 period. Of the urban households, about 33 percent depended on self-employment. Tables (3.1) and (3.2) give the distribution of households and population respectively by type of household for the different states and union territories.

* Figures in parentheses indicate the corresponding percentages obtained from NSS 32nd round.

Goa, Daman & Diu	29.20	11.73	40.93	17.21	32.59	49.80	9.27	32.54	67.46
Mizoram	84.56	3.32	87.88	0.07	1.69	1.76	10.36	37.76	62.24
Pondicherry	8.78	17.63	26.41	53.23	7.99	61.22	12.32	34.10	65.90
All India	46.12	11.80	57.92	27.68	6.10	33.78	8.30	38.52	61.48

1. For Andhra and Orissa, the figures are based on the 1961 Census.

2. The figures for Chandigarh, Dadra and Nagar Haveli, and Pondicherry are based on the 1961 Census.

4.4 Distribution of households by household industry : In the survey, information as to the sector (or industry) of activity from which relatively more income was derived by the household members during the 365 days preceding the date of survey was collected for each household. The sector of work, thus obtained on the basis of income, was defined as the household principal industry. Table (4) gives the distribution of households by the principal household industry.

Table (4) : Percentage distribution of households by principal household industry

principal household industry	all-India	
	rural	urban
(1)	(2)	(3)
1. agriculture	77.31	16.54
2. mining & quarrying	0.66	1.38
3. manufacturing	6.84	23.75
4. electricity, gas & water	0.25	1.22
5. construction	2.21	4.60
6. trade	4.35	16.55
7. transport	1.76	9.73
8. services	6.62	26.23
9. all	100.00	100.00

In the rural areas, 77 percent of the households had agricultural activities as their principal sector of work. Even in urban areas, almost 17 percent of the households depended on agriculture. While 26 percent of the urban households depended on 'services', only 7 percent of the rural households derived income mainly through service sector. Similarly, while 'manufacturing' sector was the source of income for almost 24 percent of the urban households, only about 7 percent of the rural households could depend on that sector. 'Trade' also plays an important role in the urban economy, with nearly 17 percent of the urban households deriving their major income from that sector.

4.5 Use of hired labour for entrepreneurial activities : In the 38th round survey, information on the use of hired labour for crop production and for other entrepreneurial activities was collected from the sample households in the rural areas. For urban areas, information was collected only for the use of hired labour in enterprises other than crop production. Table (5) gives the distribution of households by use of hired labour.

Table (5) : Percentage distribution of households by use of hired labour

use of hired labour category	all-India		
	rural		urban
	crop production	other enterprises	other enterprises
(1)	(2)	(3)	(4)
hires labour :			
regularly :	7.55	0.45	0.16
during peak seasons only	22.26	-	-
casually	19.48	-	0.15
hires no labour	59.71	99.55	99.69
all	100.00	100.00	100.00
percentage of hhs. having the enterprise	62.94	4.40	4.84

It is observed that in the rural areas 63 percent of the households are engaged in crop production activities. Of them, nearly 51 percent work by themselves and do not hire any labour. Only about 8 percent of the households use hired labour on a regular basis. Compared to crop production activities, a much smaller proportion of only 4 - 5 per cent of both the rural and urban households are engaged in other entrepreneurial activities and practically almost all of them run their enterprises themselves without engaging any hired labour.

4.6 Distribution of population by age : Important indicators of 'employment' and 'unemployment' are presented in the subsequent sections for population of age 5 years and above. For any man-power planning, age-specific participation rates are important which are also presented for all-India and different states in those sections. With a view to correlating these indicators with the base population, in table (6) are presented the distribution of the population of age 5 years and above by five age-groups, separately, for males and females for both rural and urban India and also for the different States and Union territories. The age-groups used for the purpose are 5-9, 10-14, 15-29, 30-44, 45-59 and 60 & above. It is observed that at all-India level, about 14 per cent of the rural population and 12 per cent of the urban population were children of age 0 - 4 years.

Table (6) : Percentage distribution of population of age 5 years and above by age group.

rural males

state/union territory	age-group (years)						total	percentage of 5+ population to total
	5-9	10-14	15-29	30-44	45-59	60 & above

Goa, Daman & Diu	7.06	12.24	38.16	17.16	15.31	9.27	100.00	93.48
Mizoram	11.15	11.99	41.65	18.81	6.78	4.59	100.00	87.10
Pondicherry	12.91	13.61	30.85	23.50	11.99	7.14	100.00	87.21
All India	14.21	13.96	33.25	19.58	11.80	7.19	100.00	87.57

1. The difference, if any, between 100.00 and sum of cols. (2) - (7) gives the percentage of persons for whom age was 'not recorded'.

2. The results for Arunachal Pradesh and Lakshadweep have not been presented.

4.7 Distribution of population by education : For a proper understanding of the totality of 'employment' and 'unemployment' and planning for generation of employment, it is necessary to study both 'employment' and 'unemployment' by education status which are discussed in the subsequent sections. It is also important to have information on the extent of educated and non-educated man power. 'Educated' is defined as those who have passed at least the matriculation or any other equivalent examination. In the 38th round survey, for each person, the information relating to his/her educational status was collected. Table (7) gives the distribution of population of age 15 years and above by 5 different general educational categories namely 'not literate', 'literate & upto primary', 'middle', 'secondary', and 'graduate & above' for all-India and the different States/Union territories. The table also gives the percentage of population of age 15 years and above to total population. In rural India, during 1983 only about 9 per cent of males of age 15 years and above and about 2 per cent of the females (15 +) are found to be educated (matriculates & above). While about 50 per cent of the rural males (15+) are 'not literate', as high as 80 per cent of the rural females are found to be not able to read or write even a simple message in any language, i.e., not literate. In urban India, about 32 per cent of the males (15+) and about 17 per cent of females (15+) are found to be educated. Graduates constitute 9 per cent of the males (15+) and a little over 4 per cent of the females (15+). The proportions of 'not literate' persons and the 'educated' vary from State to State as seen from the results presented in the tables.

Table (7) : Percentage distribution of persons of age 15 years and above by general education.

state/union territory	general education					all	percentage of 15+ population to total
	not literate	literate & upto primary	middle	secondary	graduate & above

The difference, if any, between 100.00 and sum of Cols. (2) - (6) gives the percentage of persons for whom education was 'not recorded'.

WORK-FORCE (EMPLOYED)

5.0 The segment of the population engaged in gainful activities (i.e), the activities pursued for pay, profit or family gain constitutes the 'Work force' or in other words the 'employed'. The NSSO, based on the data collected in its quinquennial surveys on employment and unemployment, has generated three different estimates of 'employed' namely :

- (i) number of persons of age 5 years and above usually employed (i.e., those worked for a relatively longer period of a reference period of 365 days preceding the date of survey);
- (ii) average number of persons of age 5 years and above employed in a week (i.e., those worked at any time during a reference period of a 'week' preceding the date of survey);
- (iii) average number of persons of age 5 years and above (strictly person-days employed on a day, (i.e., average number of working person-days per day in a week of those reported to, be working at any time during the reference week).

5.1 Usual status work-force : Of the three estimates mentioned, above, the first one gives the magnitude of the ~~XXXXX~~ 'usually employed' or the 'usual status work force'. As mentioned in Section Two, in the 32nd and 33th round surveys, 'usual status' of a person was determined on the basis of a 'relatively longer time spent' criterion with reference to a period of 365 days preceding the date of survey. Thus, the 'usual status work force' obtained through classification of population adopting the 'relatively longer time criterion' can be considered as the persons with more or less stable employment or say, 'workers in the principal status'. In both the rounds, additional information on the gainful activities pursued in a subsidiary capacity by those categorised as 'non-workers' in the principal status was also collected. Estimates generated from these data give the magnitude of persons employed in their subsidiary capacity or say, workers in the subsidiary status. These two categories - workers in the principal and subsidiary status - taken together give the estimated total 'work force'. In the 27th round, a 'usual status' worker was defined as one who was engaged in any gainful activity for a long period in the past (say, 365 days

preceding the date of survey). Thus, the 27th round estimates of 'workers' included both the categories of workers - workers in the principal status and workers in the subsidiary status - and therefore, will be comparable with the estimates of total usual status 'work-force' as obtained from the 32nd and 38th rounds. Table (8) gives the percentage of usual status 'work-force' (or work-force participation rates) i.e., the percentage of persons usually employed as obtained from the first three quinquennial rounds of the survey, viz. 27th, 32nd and 38th rounds.

Table (8) : Percentage of persons (5+) usually employed by sex and rural-urban residence status

all-India

round	category of workers	percentage of usually employed (5+) (work participation rates)			
		rural		urban	
		male	female	male	female
(1)	(2)	(3)	(4)	(5)	(6)
38	principal status	61.28	28.73	56.75	13.76
	subsidiary status	2.17	10.57	1.38	3.49
	all	63.45	39.30	58.13	17.25
32	principal status	62.25	28.82	56.22	14.03
	subsidiary status	1.81	9.66	1.26	3.77
	all	64.06	38.48	57.48	17.80
27	all	63.84	37.53	57.09	15.53

During the 1982-83 period about 61 percent of the rural males of age 5 years and above are found to be usually employed in the principal status or in other words, stably employed. The corresponding percentage of stably employed is 57 for urban males. But in the case of females, only about 29 per cent in the rural areas and 14 per cent in the urban areas have stable employment. In addition, about 1 - 2 per cent of the male population (5+) have some employment in a subsidiary capacity. On the other hand, in the case of females, nearly 11 percent in the rural areas and 3.5 per cent in urban areas pursue some gainful activity in a subsidiary capacity. Thus, of the total usually employed females, over one quarter of the rural females and about one fifth of the urban females are working only in a subsidiary capacity, their, principal activity

being one or other of the different non-work activities.

Comparing the periods 1972-73, 1977-78 and 1983, it appears that the male employment level has almost been static during the decade covering the early seventies to early eighties period. But there has been an improvement in the female employment since 1972 - 73.

In order to understand the regional variation in the level of 'employment' (usual status) obtaining for early eighties, the percentages of persons (5+) usually employed in the principal status and also employed in principal status as well as subsidiary status taken together as obtained from the NSS 38th round results are presented in table (9) separately for males and females by their rural-urban residence status. Among the major states, it is observed that the proportion of employed (principal status) for rural males is highest (69 per cent) in Andhra Pradesh closely followed by Karnataka, Tamil Nadu and Orissa. At the bottom rung are the states of Kerala and Haryana. As regards rural females, Maharashtra has the highest employment level followed by the states of Andhra Pradesh, Madhya Pradesh and Tamil Nadu. In Punjab only about 5 per cent of the rural females (5+) are employed in the principal status. In the case of urban males, inter-state variation in the employment level does not appear to be that large as observed for rural males for the major states, the lowest percentage of employed being about 53 in Kerala and Bihar and the highest being about 62 in Haryana and Punjab. Employment level of urban females is in general very low, and even less than 10 per cent in the States of Bihar, Haryana, Punjab and Uttar Pradesh. In most of the major states where the percentage of usually employed (principal status) rural females is relatively low, the proportion of 'employed' in the subsidiary status is found to be high.

Table (9) : Percentage of persons (5+) usually employed in the principal status as well as subsidiary status (total) by sex and residence status

state/union territory	rural				urban

5.2 Age-specific usual status work-force participation rates(WFPR) :

The proportion of 'employed' belonging to a specified age-group expressed in terms of percentage is defined as the age-specific work-force participation rate. Based on the age returns, both the age-specific work-force participation rate as well as the age distribution of the total work-force has been worked out. For the purpose, five specified age groups are used namely, 5-9, 10-14, 15-29, 30-44, 45-59 and 60 & above. Table (10) gives in the first half, the usual status (principle) work participation rates for each of the above specified age-groups by sex and rural-urban residence status as obtained from NSS 38th round. The second half of the table gives the percentage composition of the usual status work-force by age-group. In addition, the corresponding percentages as obtained from NSS 37th round are also presented in parenthesis.

Of the total employed in rural India, 6 per cent of the male workers and 9 percent of the female workers are found to be children in the age group 5-14 years. In urban India, 2.5 per cent of the male workers and 6 per cent of the female workers are children. Similarly, about 8 per cent of the male workers and 4 per cent of the female workers of rural areas and 5 percent of the male workers and 6 per cent of the female workers of urban areas are aged 60 years or more.

Looking at the participation rates, one can see that about 21 percent of the rural male children in the age group 10-14 years have reported to be working. The corresponding percentages for rural females, urban males and urban females are respectively 17, 9 and 5. Work participation rates are found to be highest among persons in the age-group 30 - 44.

Table (10) : Age specific usual status work-force participation rates (WFPR) and the percentage composition of the total work-force

all-India

age-group (years)	age-specific WFPR				percentage of employed*			
	rural		urban		rural		urban	
	male	female	male	female	male	female	male	female
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
5 - 9	1.99	1.78	0.54	0.50	0.54	1.00	0.13	0.51
10 - 14	21.28	16.97	9.31	5.41	5.46	8.30	2.34	5.48
15 - 29	78.92	36.12	64.00	14.51	36.38	37.14	37.71	35.07
30 - 44	98.12	45.73	97.22	23.41	30.18	31.06	35.43	33.31
45 - 59	94.98	40.68	92.11	22.81	19.40	18.23	19.35	19.56
60 & above	64.08	15.52	48.50	11.60	8.04	4.27	5.02	6.06
all ages	61.28	28.73	56.75	13.76	100.00	100.00	100.00	100.00

For understanding the regional pattern, the usual status (principal) work participation rates obtaining for the different states ~~and all India~~ are presented in table (11). As high as 42 per cent of the rural male children (10-14 years) are found to be working in Andhra Pradesh. Among the major states, percentage of working rural male children to total rural male children (age 10-14 years) is of the order of 35 in Karnataka, 30 in Orissa and between 25-28 in Madhya Pradesh, Punjab, Rajasthan and Tamil Nadu. It is lowest in Kerala (3 per cent). Compared to other states, a very high proportion of working rural female children is observed in Andhra Pradesh and Rajasthan (34-36 per cent). About 25-27 per cent of the female children are found to be working in the rural areas of Karnataka, Madhya Pradesh, Maharashtra and Tamil Nadu. It is of the order of only 2 per cent in Punjab and Kerala against an all-India average of 17 per cent. As regards male children of urban areas, Andhra Pradesh again tops the list with about 18 per cent of the children of 10-14 years as working. It is over 10 per cent in Haryana, Karnataka, Orissa, Tamil Nadu and Uttar Pradesh. The percentage of working urban female children is as high as 9 per cent in Rajasthan, Karnataka, Andhra Pradesh and Tamil Nadu closely followed by West Bengal. It is less than one per cent in Kerala and of the order of 2 per cent in Gujarat, Maharashtra and Punjab.

* for cols. (6) - (9), the total includes age 'not recorded' cases also.

5.3 Education-specific usual status work-force participation rates : 'Work-force' participation rates' cross classified by information on education will show the pattern of the relationship between educational attainment of persons and employment. In the 38th round survey, information relating to general and technical education attained by each member of the sample households was collected. For the results presented herein, only the general education is considered and the work-force participation rates of population of age 15 years and above are presented in Table (12) for five different education groups namely, 'not literate', 'literate upto primary', 'middle', 'secondary' and 'graduates and above'. Participation rate is found to be the highest among 'not literates' for rural males as well as females and also for urban males. But among urban females, graduates command the highest work participation rate, though only 28 per cent of the graduates of age 15 years & above have opted to work. In rural areas, only 22 per cent of the female graduates (15+) are employed whereas, the corresponding proportion is 77 per cent for rural male graduates. In urban areas, only 81 per cent of the male graduates of age 15 years & above are employed. Educated employed (Persons with educational qualification matriculation and above and employed) constitute only 7 per cent of the total employed males (15 +) and 1 per cent of the employed females (15 +) in rural areas. In the urban areas 29 per cent of the employed males (15 +) and 17 per cent of the employed females (15+) are educated.

Table (12) : Education-specific usual status work-force participation rates (WFPR) and the percentage composition of the total work-force of persons of age 15 years and above

all - India

general education	education-specific WFPR				percentage of employed*			
	rural		urban		rural		urban	
	male	female	male	female	male	female	male	female
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
not literate	91.02	40.73	86.26	24.05	52.92	87.01	22.61	60.30
literate upto primary	88.47	27.65	84.13	13.44	29.42	10.09	30.58	17.92
middle	70.21	15.79	68.83	7.07	10.45	1.32	17.63	5.23
secondary	66.48	15.00	65.18	13.38	5.85	0.84	19.20	9.62
graduate and above	77.43	22.00	80.98	27.85	1.36	0.24	9.98	6.93
all	85.56	37.32	76.94	18.01	100.00	100.00	100.00	100.00

Education-specific usual status participation rates for the different states and union territories for the population of age 15 years and above are presented in Table (13)

* for cols. (5) - (9), total includes education 'not recorded' cases also.

5.4 Industrial distribution of usual status work-force :

In the 30th round survey as well as in the earlier two quinquennial surveys, information relating to the sector of work (industry) in which a person was employed was collected for each of the persons categorised as usually employed. Table (14) gives the distribution of usually employed in the principal status, in the subsidiary status and both taken together, by industry, separately for males and females. The comparable estimates obtained from NSS 32nd and 27th rounds are also presented in the table.

In the rural areas, over three quarters of the male principal status workers and about 36 per cent of the female principal status workers are engaged in the agricultural activities. Of the persons employed only in a subsidiary capacity, 87 per cent of males and 91 per cent of the females depend on 'agriculture' for their employment. It is also seen that in the rural sector, both in the case of males and females, over the period 1972-73 to 1983, there is ^a gradual fall in the employment in agricultural sector, from 85 per cent in 1972 - 73 to 78 per cent in 1983 in the case of males and 90 per cent in 1972 - 73 to 88 per cent in 1983 in the case of females. This fall has been absorbed mainly by 'manufacturing', 'construction', 'trade' and 'service' sectors in the case of males and by 'manufacturing' sector in the case of females.

In the urban areas, both the 'manufacturing' and 'service' sectors ^vcater (mainly) to 'employment' in the case of males as well as females. 27 per cent of the male workers are in the 'manufacturing' sector and another 25 per cent in the 'service' sector. In the case of females, 27 per cent of workers ~~are~~ each are absorbed by ^{both} the 'manufacturing' and 'service' sectors. Next in importance is 'trade' for males which has absorbed 20 per cent of the male workers. In the case of females, 'agriculture' is the most important sector absorbing 31 per cent of the total workers. In general, it appears that there has not been any marked change in the industrial distribution over the ten year period 1973-83 in the case of urban workers.

Table (14) : Percentage distribution of usually employed persons of age 5 years and above by industry division.

2. 'total' includes industry 'not recorded' also.

SPC/

5.5 Estimates of work-force according to current status : The industrial distribution of the usual status 'work-force' has revealed that the major chunk of the rural employed - both men and women - pursue agricultural activities as their usual vocations. Naturally, the employment pattern obtaining for India, particularly of the rural areas, is characterised by the seasonal fluctuations in the agricultural activities. Persons usually engaged in 'agriculture' and 'agriculture' based industries are likely to change their usual pursuits during the lean seasons in agriculture. Some may temporarily take up employment in non-agricultural sectors, some may remain unemployed and some, particularly women, may even withdraw from labour force. This pattern may change for an individual from one week to another and even from one day to another in a week. These changes in the activity pattern of the population caused due to seasonal fluctuations are not brought out by the estimates obtained through classification of population adopting the usual status approach. The estimates obtained through classification adopting the current week and current day status approaches are expected to reflect the overall effect caused due to intermittent changes in activity pattern of the population. As mentioned earlier, the current week status estimate of 'work-force' will give the number or proportion of persons employed on an average in a week and the current day status estimates will give the number or proportion of employed person-days on an average in a day during the survey year. In view of the priority criterion adopted for classification of population in the current week status approach, the week status estimate of 'work-force' will, infact, indicate the magnitude of persons who had some 'work' in a week during the survey year. The day status estimates will give the picture of the volume of population in terms of person-days, who had pursued economic activities, on an average in a day. Table (15) gives the estimated percentage of persons of age 5 years and above employed according to current week and current day status as obtained in the NSS 38, 32 and 27th rounds.

It is seen that on an average in a week during the year 1983, about 59 per cent of the males and 26 per cent of the females in the rural areas and 56 per cent of the males and 14 per cent of the females ^{in the urban areas} had at least some work during the week. Considering the decade 1973-83, there appears to be a ~~apparent~~ sharp fall in the employment level during the 1977-83 period compared to 1972-73

period in the case of rural females. NSS, in its earlier document* has attributed this ~~apparent~~ fall to the conceptual change made in the second and subsequent quinquennial surveys causing possible misclassification of females who usually combine gainful activities with house chores and other activities which derive benefits to their households - a pattern which is more prevalent in the case of rural females. In view of the consistent week status estimates of employment obtained from both the NSS 32nd and 38th rounds for rural females, it could be possible that the 27th round had overestimated the rate, possibly, ~~by~~ misclassifying some of the rural women engaged in non-gainful activities ^{(which} derive family benefits also ^{along with} ~~house chores~~ ~~and other activities~~ ~~as pursuing gainful activities.~~ ^{house chores,} ~~and other activities~~ ^{as pursuing gainful activities.}

* Employment-unemployment situation in India during the seventies - A comparative study based on the results ~~based~~ of the NSS 27th and 32nd round surveys, Sarvekshna, Vol.III, No.3.

The week status rates of employment obviously gives a magnified picture of the employment. They, in fact, do not reflect the fluctuations in employment within a week. The day status rates, therefore, give a more realistic picture of the employment level. It is observed that in the case of both men and women of rural India, the day status rates are about 3 percentage level below the corresponding week status estimates indicating that on an average about 3 per cent of the rural males as well as females, though had some work in a week, did not work throughout the week and in a way remained underutilised. The corresponding proportion of the 'underutilised' in a week is observed to be 2 per cent in the case of urban males and about 1 per cent in the case of urban females.

The proportion of underutilised obviously, will vary from region to region and within a region from rural areas to urban areas. For a proper understanding of the regional variation, the relevant rates for the different states and union territories are presented in table (16). Comparing the major states, in the case of rural males, the proportion of the underutilised is found to be the highest (of the order of 8 per cent) in Kerala and Tamil Nadu followed by West Bengal (6 per cent) and Karnataka (5 per cent). The difference between the two rates is practically nil in Haryana. In the case of rural females, the difference is highly pronounced in Gujarat and Tamil Nadu (8 per cent each) followed by the States of Andhra Pradesh, Karnataka, Maharashtra, and Kerala, ^{in the case of urban males, again Kerala} and Tamil Nadu have the highest difference between the two rates. For urban females the difference is over 2 per cent in Andhra Pradesh, Gujarat, Kerala and Tamil Nadu as against the all-India average of 1 per cent.

5.6 Seasonal fluctuations in employment : In India, with agricultural sector dominating the economy, seasonality is an important factor to be considered while looking at the employment - unemployment indicators, particularly, those relating to the rural sector. During the lean seasons in the agricultural activities, there will be cases of withdrawal from work force, some reporting as unemployed, while others, particularly women, withdrawing from labour force in favour of house chores. In order to study this type of seasonal fluctuations in employment and unemployment, estimates of current week and current day status estimates of 'employed' as well as 'unemployed' have been generated for each of the four sub-rounds, which, as mentioned in section 1, are almost co-terminus with the four seasons. Table (17) gives the percentage of 'employed' both according to week status and day status for each sub-round by sex and rural-urban residence status. In rural areas, both in the case of males and females, the 'employment' (according to both the week status and day status) is highest during July - September period, the busiest season for agricultural activities and lowest during April - June period, the lean season for agriculture. The withdrawal from work-force during the lean seasons is more pronounced among females compared to males. In the urban areas on the other hand, 'employment' is found to be highest during the periods October-December and January-March.

Table (17) : Percentage of 'employed' (5+) according to 'week status' and 'day status' for each sub-round by sex and residence status

Figures in parentheses are the corresponding estimates as obtained from NSS 32nd round.

Section Six

UNEMPLOYED

6.0 As in the case of 'employment', three different estimates for measuring 'unemployment' are generated from the survey data which are :

- i) number of persons of age 5 years and above usually unemployed
- ii) average number of persons of age 5 years and above unemployed in a week and
- iii) average number of persons of age 5 years and above (strictly, person-days) unemployed on a day.

The first one indicates the magnitude of persons unemployed for a relatively longer period during a reference period of 365 days and in that ^{Sense} ~~case~~ may be considered as 'chronically unemployed'. The second estimate, gives the average week picture during the survey year and includes both chronic unemployment and also the intermittent unemployment caused due to seasonal fluctuations in employment of those categorised as usually employed. The third estimate, based on the classification of population according to current day status, indicates the average volume of unemployment in terms of per-days on a day during the survey year. It is the most inclusive rate of 'unemployment' capturing the unemployed days of the chronically unemployed, the unemployed days of the usually employed who become intermittently unemployed and unemployed days of those classified according to the priority criterion of current week status as employed. The above three estimates of unemployment together will reveal the different facets of the unemployment situation obtaining for the country.

6.1 Comparative estimates of unemployment : It may be recalled that for all persons categorised as 'non-workers according to usual status', information relating to the gainful activity pursued, if any, in their subsidiary capacity was also collected both in the 38th and 32nd round surveys. It was therefore, possible to also generate an estimate of usually unemployed who had not pursued any gainful activity even in a subsidiary capacity (i.e) the estimate of usually unemployed excluding the subsidiary status workers, which will be

comparable with the estimates of usually unemployed thrown up by the NSS 27th round. In table (18) are presented the percentages of 'unemployed' (5+) according usual ^{principal} status, 'unemployed' according to usual status excluding subsidiary status workers (usual status - adjusted) which are comparable with NSS 27th round estimates, and 'unemployed' according to current week and current day statuses. For obtaining a comparative picture for the 1973-83 decade, the corresponding estimates of unemployed as obtained from NSS 32nd and 27th rounds are also presented in the table.

Table (18) : Percentage of persons (5+) unemployed by sex and rural-urban residence status

all-India

round	approach	percentage of unemployed(5+)			
		rural		urban	
		male	female	male	female
(1)	(2)	(3)	(4)	(5)	(6)
38	usual status (u.s) - all	1.33	0.41	3.53	1.02
	u.s adjusted	0.91	0.26	3.11	0.88
	current week	2.29	1.17	4.01	1.09
	current day	4.54	2.26	5.46	1.50
32	usual status(u.s) - all	1.41	1.68	3.90	3.03
	u.s adjusted	0.83	0.79	3.28	2.52
	current week	2.23	1.16	4.25	1.75
	current day	4.33	2.28	5.55	2.12
27	u.s adjusted	0.75	0.18	2.87	1.00
	current week	1.93	1.90	3.54	1.44
	current day	4.32	3.44	4.74	1.98

The proportion of chronically 'unemployed' (5+) during 1982-83 is estimated as; rural males - 1.3 per cent; rural females - 0.4 per cent; urban males-3.5 per cent; urban females - 1.0 per cent. It is known that for 'self employed' and 'casual wage labourers', there may not be enough work throughout the year, and therefore, a section of the usually employed lapse into unemployment during the lean seasons in agricultural activities. The week status estimates of unemployed reflect

also such type of intermittent 'unemployment' of usually employed along with the 'unemployment' of chronically 'unemployed' and in general, therefore, will give a higher estimate of 'unemployed' compared to the estimates of usual status 'unemployed'. On the other hand, as explained earlier, the current day status estimates will give a still higher rate of unemployment, as it includes also the unemployed days of those categorised as having some work during a week.

In rural areas, it is seen that during 1983, 4.5 per cent of the male person-days and 2.3 per cent of the female person-days have been reported as unemployed on an average on a day which is almost double of the week status rates. In urban areas, the current day status rates are 5.5 per cent and 1.5 per cent respectively for males and females as against the corresponding week ^{status} rates of 4.0 per cent and 1.1 per cent. While comparing the estimates of chronically 'unemployed' over the rounds, 27th round estimates are to be compared with the adjusted estimates of 32nd and 38th rounds. In the case of males - both rural and urban - there appears to be slight and gradual increase in the chronic unemployment level since 1972-73. In the case of females, 1977-78 (32nd round) estimate of chronic unemployment is on the higher side compared to the estimates thrown up by the NSS 27th and 38th rounds for both rural and urban areas. Comparing the current day status rates, it is seen that the level of unemployment is almost static over the ten year period 1973 - 1983 for rural males; whereas there is an improvement in the unemployment level of rural females during late seventies and early eighties compared to early seventies. In the case of urban males, unemployment level appears to have increased since 1972 - 73 and in the case of urban females, there is an improvement in the

situation during early eighties compared to seventies.

For having an insight into the regional variation, the relevant rates are presented in table (19) for the different States and Union Territories. The unemployment is found to be highest in Kerala for both males and females in rural as well as urban areas compared to any other state. Among the major states, chronic unemployment level of rural males is found to be a little over 2 per cent in Haryana, Punjab, Tamil Nadu and West Bengal and about 6 per cent ⁱⁿ Kerala ^{as} against the all-India average of 1.3 per cent. As regards rural females, the rate for Kerala is 4 per cent followed by Tamil Nadu (1.2 per cent). For all other states, it is less than one per cent. As regards, urban males, the chronic unemployment rate is as high as 7 per cent in Kerala, followed by West Bengal (6 per cent) and Tamil Nadu (5 per cent) against an all-India average of 3.5 per cent. For urban females, the level is 5 per cent in Kerala and about 2 per cent in Tamil Nadu and West ^{Bengal} _{as} against the all-India average of 1 per cent.

6.2 Age-specific usual status unemployment rates : For an analytical view of the unemployment situation, data on the age structure of the 'unemployed' as well as the proportion of 'unemployed' in the different age-groups will be useful. Table (20) gives the relevant information for the usually unemployed (5+).

Table (20) : Age-specific usual status unemployment rates and percentage composition of the total unemployed by age-group

all-India

age-group (years)	age-specific unemployment rates				percentage of unemployed			
	rural		urban		rural		urban	
	male	female	male	female	male	female	male*	female
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
5 - 9	0.01	0.02	0.03	-	0.07	0.65	0.11	-
10 - 14	0.65	0.21	1.15	0.14	7.66	7.04	4.61	1.97
15 - 29	3.36	1.04	8.93	2.67	82.08	74.11	84.56	86.82
30 - 44	0.51	0.25	1.36	0.49	7.27	11.69	7.94	9.28
45 - 59	0.21	0.15	0.65	0.15	2.05	4.57	2.21	1.79
60 & above	0.15		0.31	0.02	0.89	1.94	0.52	0.14
		0.10						
all ages	1.33	0.41	3.53	1.02	100.00	100.00	100.00	100.00

It is seen that in the rural areas about 81 per cent of the unemployed males and females and in the urban areas about 5 per cent of the unemployed males and 2 per cent of the unemployed females are children in the age-group 5-14 years. Majority of the unemployed belong to the age group 15-29 years. In this age-group, almost 4 per cent of the rural males and 9 per cent of the urban males are chronically unemployed. The corresponding percentages are about 1 and 3 respectively for rural females and urban females. The age-specific unemployment (usual status) rates for the different states and all-India are presented in (21) Table

* total includes age 'not recorded' case also.

Table (21) : Age-specific unemployment rates according to usual status.

6.3 Education-specific usual status unemployment rates : For studying the relationship between unemployment and educational attainment of the population in table (22) are presented the proportions of persons of ^{usually un employed,} (age 15 years and above to total persons (15+) by the 5 different general education levels or in other words, education-specific usual status unemployment rates. The table gives also the percentage composition of the usually unemployed by education. The results reveal that in the rural areas, 11 per cent of the male graduates and 16 per cent of the female graduates and in the urban areas, 6 per cent of the male graduates and 7 per cent of the female graduates are chronically unemployed. Similar high proportion of unemployment is also observed among those with secondary level of education. Unemployment is observed to be the least among the persons who are not literate. It is also observed that in the rural areas about 41 per cent of the unemployed males are educated. (i.e., those with education attainment of the level of secondary and above). The corresponding proportion for rural females is about 37 per cent. In the urban areas 44 per cent of the unemployed males and as high as 61 per cent of the unemployed females are educated.

Table (22) : Education-specific usual status unemployment rates and percentage composition of the unemployed (15+) by education.

all-India

education	education specific unemployment rates of persons of age 15+				percentage of unemployed (15+) to total unemployed			
	rural		urban		rural		urban	
	male	female	male	female	male*	female	male	female

all	1.82	0.55	4.68	1.40	100.00	100.00	100.00	100.00

* total includes education 'not recorded' cases also.

The education-specific usual status unemployment rates for persons of age 15 years and above for the different States and Union Territories are presented in table (23). Considering the major states, in rural areas chronic unemployment among male graduates is found to be the highest in Tamil Nadu (21 per cent) followed by Andhra Pradesh (19 per cent), Bihar (18 per cent), Karnataka (16 per cent) and West Bengal (12 per cent). For rural female graduates, chronic unemployment is found to be the highest in Haryana (31 per cent). For them the unemployment level is 29 per cent in West Bengal, 26 per cent in Kerala, 21 per cent in Tamil Nadu and 16 per cent in Karnataka. It is the least in Uttar Pradesh (2 per cent) as against the all-India average of 16 per cent. The chronic unemployment of urban male graduates is the highest in Andhra Pradesh ~~12 per cent~~ and Tamil Nadu (12 per cent each) followed by Kerala 10 per cent, Bihar and West Bengal (9 per cent each), Uttar Pradesh (7 per cent) and Orissa 6 per cent. In other states, the level is below the all-India average of 6 per cent with the lowest in Punjab (2 per cent). For urban female graduates the chronic unemployment level is above the all-India average of 7 per cent in West Bengal and Orissa (18 per cent each), Kerala (16 per cent), Andhra Pradesh (14 per cent), Tamil Nadu (13 per cent) and Karnataka (10 per cent). It is the lowest in Gujarat (2 per cent).

6.4 Seasonal fluctuations in unemployment : As mentioned in para 5.6, during the lean seasons in agriculture, particularly in the rural areas, a section of the working population withdraw from work-force either voluntarily or involuntarily due to fall in demand for labour. Many of them report as unemployed but a few, particularly a section of woman, may even withdraw from labour-force. Naturally, the fall in demand for labour during the lean seasons in agriculture tends to push up the unemployment level during that period. Thus, the unemployment level may vary from season to season. This pattern can be studied from the sub-round wise estimates of current week and current day status unemployment rates. The relevant estimates are presented for all-India cross classified by sex and rural urban residence status in table(24).

In rural areas, for both males and females, unemployment is the highest during the months of April to June, the period leanest for agricultural activities and the least during the months of October to December. But in urban areas, for males, unemployment is the highest during the months of July to September which is the rainy season. But, for females, unemployment is found to be the highest during the months of January to March.

Table (24) : Percentage of 'unemployed' (5+) according to 'week status' and 'day status' for each sub-round by sex and resident status.

6.5 Incidence of unemployment : In the foregoing, unemployment rates have been presented taking the population of age 5 years and above or 15 years and above as base and cross classified by different correlates, such as, age, sex, education, etc. But the incidence of unemployment (i.e) the rate of unemployment with the 'labour force' as base is a more useful index of unemployment. In table (25) are given the three rates of the incidence of unemployment - usual status, current week status and current day status - separately for males and females.

It is seen that in general the current status unemployment rates are higher than the usual status rates for most of the states indicating intermittent unemployment amongst those categorised as usually employed. However, for rural males, the usual status rates are higher than the current week status rates in Assam and Andaman Nicobar Islands indicating that some of the people who are usually unemployed get some work intermittently and such people outnumber those who are usually employed but have intermittent unemployment. In the case of urban males the usual status rates are higher in Bihar and Meghalaya, Similar exceptions are observed in the case of both rural and urban females. At all-India level the incidence of chronic unemployment is estimated as about 2.1 per cent for rural males, 1.4^{percent} for rural females, 5.9 per cent for urban males and 6.9 per cent for urban females.

Section Seven

UNDEREMPLOYED

7.0 Underemployment is of two types, visible and invisible. Agriculture being the main sector of work, particularly in the country side, many engaged in that sector for a relatively longer period in the year, may not find enough work during the lean seasons in agricultural activities and therefore, may remain unemployed during some part of the year. This malady of intermittent unemployment is more so among the self employed and agricultural labourers. Thus, a section of the population categorised as usually or stably employed do not have work throughout the year and in that sense, underemployed. Since one can measure the number of weeks or number of days a usually employed person remain unemployed, this type of underemployment is visible and measurable. It may be noted that *while* some of them may not have any work during some weeks of the year, there may be others among them who have some work during the weeks of the lean seasons but unemployed on some days of the week and thereby remaining underemployed during those weeks.

A second category of usually employed, particularly belonging to the self-employed category may appear to work throughout the year. But either in terms of productivity or income, the work ~~is~~ ^{may} not be sufficient for them. With the large quantum of time available with them, they may linger on in the ^execution of whatever ~~amount~~ ^{quantum} of 'work' they are having with them and in that sense, are underemployed. Such underemployment, infact, is not visible and therefore, it is not directly measurable.

Many persons belonging to both the above categories of 'underemployed', visible and invisible, may want to take up additional work either during the period when they have no work or side by side with the existing work, in order to augment their income. In the survey, therefore, some probing questions are asked to persons categorised as usually employed to bring to light their availability for additional work, type of work desired, etc.

In order to get an idea of the magnitude of underemployed, two types of indicators are generated from the NSS 38th round data. The first is through the results obtained by cross classifying

(a) the usually employed by their week status, (b) the usually ^{employed by their day status} and (c) employed according to week status by their day status. The average number of usually employed but having no work in a week (i.e), the average number of underemployed in a week will be given by (a) whereas (b) will indicate the average day picture of the volume of 'underemployment', in terms of unemployed person-days. The volume of 'underemployment' on an average in a day of those who have some work in a week in terms of unemployed person-days will be indicated by (c).

The second indicator of 'underemployed' is based on the answers to the probing questions put to the usually employed. All 'usually employed' were asked whether they were available for any additional work. Naturally, those who have even full time work may indicate availability for additional work, may be because, the present work they have is not enough to meet their financial requirements. Thus, a count of those among the usually employed who answered in the affirmative to the particular probing question will give an indirect measure of the 'underemployed', either in terms of having not enough work or in terms of not having enough returns.

7.1 Usual status versus week status : Table (26) gives the percentage distribution of persons (5+) by their usual and current week activity status. In the rural areas, while about 95 per cent of usually employed males have some work throughout the year (i.e, employed during the week also) only 82 per cent of the females are employed throughout the year. The percentage of unemployed among the usually employed is about 2 per cent for males and 3 per cent for females. It is interesting to note that as high as 15 per cent of the usually employed rural females withdraw from labour force, when there is no work for them during the year. In urban areas ^{about} 4 per cent of both the usually employed males and females are found to be unemployed and in that sense, underemployed on an average in a week during 1983.

One interesting feature revealed by this table is that on an average about 22 per cent of chronically unemployed rural males and 20 per cent of the rural females find some employment during a week. The corresponding proportion for urban males and females is of the order of about 8-10 per cent.

Table (26) : Percentage distribution of persons of age 5 years and above by broad usual and current week activity status.

7.2 Usual status versus day status : As mentioned earlier, some of the usually employed may completely be without work during some weeks of the year. Many others may have some work during the weeks of the lean months but not necessarily on all the days of the week. Therefore, the results obtained through cross classification of the person-days of the usually employed by their day status will throw up the estimates of average proportion of unemployed person-days of usually employed on a day during the year or in other words, the average day picture of the underemployed person-days of the usually employed. Table (27) gives the relevant results. It is seen that on an average about 6 per cent of the person-days ^{of} the usually employed rural males and females are unemployed during a day of the year. While about 5 per cent of the person-days of the usually employed rural males withdraw from the labour-force, on an average during a day, the corresponding proportion for females is as high as 21 per cent. In the urban areas, the proportion of underemployed person-days of the usually employed is 4 per cent both in the case of males and females.

On the other hand, it is seen that on an average about 17 per cent of the person-days of the chronically unemployed rural males and 12 per cent of the person-days of the chronically unemployed ^{rural} females find some employment during a day. The corresponding proportions are 7 per cent and 6 per cent respectively for the chronically unemployed males and females of the urban areas.

7.3 Week status versus day status : It was seen that a section of the usually employed do not get any work during some weeks of the year. On the other hand, some of the usually not employed find some work during some weeks of the year. But all those, ^{who} thus find some work in the varying weeks of the year, may not be having work on all the days of the weeks and in that sense some of them will be underemployed during some of the weeks of the year. The average pattern obtaining for the year will be revealed by the results obtained through cross classification of the person-days of persons categorised as employed according to current week status by their current day status. Table (28) gives the relevant results. In the rural areas, on an average about 4 per cent of the person-days of those who have some work during a week are unemployed both in the case ^{of} males as well as females. The corresponding proportion for the urban areas is about 3 per cent both for males and females. In the case of rural females, it is seen that almost 9 per cent of the person-days go out of labour-force when there is no work for them on those days as against the corresponding proportion of 2 per cent in the case of rural males. In the urban areas also, a similar high proportion (7 per cent) of withdrawal from labour force is observed for females. The results presented in table (28) have made it clear that at least some of the persons categorised as employed during the week, either do not get work on some days of the week or elect to withdraw from work-force on certain days. Thus, a part of the labour time (in terms of days) of those who had some work in a week is either underutilised or not-utilised. This pattern * is also revealed by the results given in table (29) which gives the distribution of persons classified as working according to week status by number of days worked in a week.

Table (28) : Percentage distribution of person-days of persons of age 5 years and above by broad current week and day activity status

all-India

	<u>urban</u>										

Table (29) : Percentage distribution of persons classified as employed according week status by number of days worked during the week

all-India

number of days worked	rural		urban	
	male	female	male	female
(1)	(2)	(3)	(4)	(5)
all the 7 days	84.57 (84.30)	69.85 (63.76)	87.28 (89.51)	75.05 (71.15)
4 days or more but less than 7 days	11.16 (10.93)	16.02 (16.84)	10.15 (7.93)	13.78 (13.44)
less than 4 days	4.27 (4.77)	14.13 (19.40)	2.57 (2.56)	11.17 (15.41)
total	100.00	100.00	100.00	100.00

It is seen that of the persons classified as working according to week status, only 85 per cent of the rural males and 87 per cent of the urban males have work throughout the week, the remaining being underutilised. In the case of females, only 70 per cent in the rural areas ^{and} 75 per cent in the urban areas have work on all the days of the week. As high as 14 per cent of the rural females and 11 per cent of the urban females have work for less than 4 days of the week. Among males, only 4 per cent in the rural areas and 3 per cent in the urban areas are in the similar position of having only less than 4 days of work in a week.

7.4 Indirect measure of underemployment : As mentioned earlier, one of the greater maladies of our country is underemployment. - Visible and Invisible. A section of the population may be underutilising the available labour time due to lack of work. Another group may be having enough work but the returns obtained may not be sufficient for them. Both the groups may be available for additional work and therefore, answers in the affirmative to a question ^{put to them} on availability for additional work, in a way will indicate, though indirectly, the magnitude of the 'underemployed'. In the 38th round, the probing enquiry included such a question for those categorised as usually employed. The proportion of usually employed but available

Figures in parentheses give the corresponding estimates as obtained from NSS 32nd round.

additional work, thereby indicating underemployment is presented in table (30) by sex, rural - urban residence status and broad usual activity category.

Table (30) : Percentage of 'usually employed' available for additional work

usual activity category	all-India			
	rural		urban	
	male	female	male	female
(1)	(2)	(3)	(4)	(5)
self-employed in agriculture	11.81	6.95	11.08	5.64
self-employed in non-agriculture	15.96	11.92	10.37	10.74
regular employees in agriculture	14.67	13.08	12.13	5.30
regular employees in non-agriculture	11.69	11.17	7.44	8.34
casual wage labour in public work	29.17	27.22	33.08	20.77
casual wage labour in agriculture	38.94	33.06	37.63	34.90
casual wage labour in non-agriculture	35.31	22.89	35.69	22.67
total usually employed	20.25	18.11	13.05	14.55

In the rural areas, about 20 per cent of the usually employed males and 18 per cent of the usually employed females are found to be underemployed (i.e, available for additional work). The corresponding proportions for urban areas are 13 per cent and 15 per cent respectively for males and females. Underemployment is highest among casual labourers, particularly among these usually engaged in agricultural activities. In order to get an idea of the regional variation in

in the extent of underutilisation of labour time of the usually employed, the percentages of persons available for additional work to total persons classified as usually employed are presented in table 31 separately for males and females - rural and urban-for each State and Union territory. For usually employed rural males, among the major states, West Bengal and Tamil Nadu record the highest proportion of underutilised or underemployed (32 per cent) followed by Haryana (29 per cent), Bihar (28 per cent), Kerala (25 per cent), Maharashtra and Orissa (21 per cent) and Karnataka and Punjab (20 per cent) as against an all-India average of 20 per cent. The lowest proportion of underutilised rural employed males is in Gujarat (11 per cent). In regard to usually employed rural females, West Bengal records the highest underemployment (37 per cent) followed by Tamil Nadu (30 per cent) and Kerala (27 per cent). Above the all-India average of 18 per cent are the major States of Andhra Pradesh (21 per cent), Bihar and Karnataka (20 per cent), Maharashtra (24 per cent) and Orissa (21 per cent) in addition to the ~~above~~ above mentioned three States. For urban males, Kerala tops the list with almost 23 per cent of the usually employed reporting as underutilised closely followed by Tamil Nadu (21 per cent) and West Bengal (19 per cent). But in the case of urban females, Bihar (23 per cent) tops the list followed by Tamil Nadu (21 per cent) and Kerala (20 per cent). They apart, Andhra Pradesh, Gujarat, Maharashtra, Orissa and West Bengal record a relatively higher percentage of underemployed compared to the all-India average of almost 15 per cent.

Table (31) : Percentage of usually employed (5+) seeking or available for additional work.

State/union territory (1)	rural		urban

WOMENS' PARTICIPATION IN ACTIVITIES
DERIVING BENEFITS TO THEIR HOUSEHOLDS

8.0 It was seen that the work participation rates of the women is relatively much lower than that of the men. Most of the women are observed to be engaged in house chores. But many among them, particularly in the rural areas, carryout also certain activities which derive benefits to their households. Such activities are often pursued by women along with and as a part of their usual house chores, participation of women in such activities are not reflected by the usual indicators of 'employment'. Further, some women, because of the country's tradition, may not be willing to comeout of their house premises for 'work'. But they may be willing to accept certain types of work if such work is brought to their households. In order to understand this peculiar nature of women's participation in activities deriving benefits to the households and their availability for 'work' in the household, a set of probing questions were first introduced in the survey conducted during the NSS 32nd round to be put to persons categorised as usually engaged in household duties. These probing questions were revised on the basis of the experience gathered in the 32nd round for the use in the 38th round survey. Some results based on the answers obtained for the questions included in the probing questions are presented below.

8.1 Women's participation in specified activities: Each person categorised as usually engaged in household duties was asked whether he or she also pursued certain specified activities more or less regularly for household use along with their normal house chores. The x returns obtained were tabulated only for females of age 5 years and above. The relevant results, (i.e), percentages of women (5+) engaged in household duties and also participated in specified activities for household use to total females engaged in household duties are presented in table (32).

Table (32) : Percentage of females (5+) engaged in household duties and also participate in specified activities to total females engaged in household duties.

activities (1)	all-India	
	rural (2)	urban (3)
1. maintenance of kitchen garden, orchards, etc.	14.4	4.6
2. work in household poultry	14.5	3.9
3. work in household dairy	31.8	6.0
4. any of the items 1 - 3	43.7	11.7
5. free collection of fish, small game, etc.	24.1	3.1
6. free collection of firewood, cattle feed, etc.	43.5	8.0
7. any of items 1 - 3 and 5 - 6	65.1	17.2
8. husking paddy	27.6	2.3
9. preparation of gur	2.2	0.2
10. grinding of food grains	38.8	13.5
11. preparation of cow dung cakes for use as fuel	49.9	9.1
12. sewing, tailoring, etc.	17.4	20.8
13. tutoring of children	3.4	10.0
14. bringing water from outside the hh. premises	63.0	34.8
15. bring ^{ing} water from outside the village	3.3	-
16. percentage of persons engaged in household duties to total persons (5+)	42.0	50.5

It may be noted that a person engaged in any one or more of the activities 1 to 3 and 5 - 6 for a relatively longer time during the reference year will be classified ^{in general,} as employed. ^{usually}

A woman classified as engaged in domestic duties and yet reported to be participating in the above activities, therefore, will only be pursuing those activities in a subsidiary capacity spending only marginal or nominal time. It is seen that of the women categorised as engaged in household duties, as high as 65 per cent in the rural areas and 17 per cent in the urban areas are engaged in one or more of the activities ^{relating} to primary section solely for household consumption. In the rural areas, 63 per cent of the women engaged in household duties have to bring water from outside the household premises. The corresponding proportion for urban areas is 35 per cent.

8.2 Availability of women for work in the household premises:

In the probing enquiry, as mentioned earlier, information was collected from each person categorised as engaged in domestic duties regarding their availability for work & if work is made available at the household, type and nature of work acceptable etc. Table (33) gives ^{The} distribution of females engaged in domestic duties but expressed willingness to accept 'work' at their residences by type of work acceptable to them.

Table (33) : Percentage distribution of females (5+) usually engaged in household duties and willing to accept work at their residences by type of work acceptable

type of work acceptable (1)	all-India	
	rural (2)	urban (3)
diary	32.65	15.23
poultry	10.91	7.91
other animal husbandry	11.12	3.01
spinning and weaving	16.68	15.25
manufacturing wood & cane products	0.94	1.81
tailoring	20.17	40.16
leather goods manufacturing & repairing	0.23	0.72
others	7.30	15.91
total	100.00	100.00
percentage ^{of} females willing to accept work to total females engaged in household duties	24.46	21.93
percentage of females engaged in household duties to total females	42.00	50.90

24 per cent of the rural females engaged in household duties and 22 per cent of the urban females engaged in household duties are willing to accept work if work is made available at their residences. Of them, in the rural areas, 33 per cent prefer to have work relating to dairy activities, 20 per cent tailoring work and 17 per cent work relating to spinning and weaving. In the urban areas, the most preferred work is tailoring (40 per cent) followed by dairy and spinning and weaving (15 per cent each).

The survey results revealed also that ^{all} of those expressed availability for work in the household are not available for work on a full time basis. Some are available only on a part time basis and some even only on ^{an} occasional basis. Table (34) gives the distribution of females available for work at their residences by ~~the~~ nature of work (full time/part time/occasional) *acceptable*.

Table (34) : Percentage distribution of females willing engaged in household duties and to accept work at their residences by type and nature work acceptable

type of work acceptable	all-India					
	rural			urban		
	nature of work			nature of work		
	full-time	part-time	occasional	full-time	part-time	occasional
(1)	(2)	(3)	(4)	(5)	(6)	(7)
diary	32.07	62.27	5.66	35.37	61.20	3.43
poultry	26.69	65.87	7.44	34.48	53.91	11.62
other animal husbandry	29.79	57.28	12.94	43.98	49.32	6.70
spinning & weaving	23.10	64.83	12.07	25.48	61.13	13.40
manu. wood & cane products	22.28	75.86	1.86	29.55	56.47	13.98
tailoring	30.12	58.79	11.10	30.62	59.89	9.49
leather goods manu. and repairing	41.46	50.22	8.31	43.08	52.57	4.35
others	39.47	47.70	12.83	44.08	47.57	8.36
total	29.81	60.87	9.32	33.48	57.41	9.11

In the rural areas, only 30 per cent of the females engaged in household duties and willing to accept work at their residences are available for such work on a full-time basis. The corresponding proportion for the urban areas is 33 per cent. For the different types of work, the percentage of females willing to accept work on a full-time basis varies from 22 per cent to 41 per cent in the rural areas and from 26 per cent to 44 per cent in the urban areas.

WORK UNDER OBLIGATION

9.0 In India, particularly in the country side, there exists a section of the population, though small, who are attached to land lords, money lenders, etc. and are forced to work under certain obligations in lieu of the favours received earlier. These obligations are of two types - (i) lack of freedom to change the employer ^{any time} ~~throughout~~ the year or only during busy seasons and (ii) wages to be received are less than the locally prevalent rates, i.e., the wages being received by others. Thus, in their 'work' condition an element of bondedness is involved. An attempt was first made in the NSS 32nd round survey to identify this particular set of 'workers' and obtain an estimate of their magnitude. For identifying the set and categorising them accordingly, an activity category namely 'Working under obligation but work not specifically compensated' (codes 01-04) was defined involving either or both of the two types of obligations mentioned above. ~~For the definition used see page 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000~~ The 32nd round survey estimates of this category of workers (5+) are:

rural male - 0.18 per cent; rural female - 0.02 per cent;
urban male - 0.03 per cent; urban female - 0.00 per cent.

The users, however, felt that, probably the proportions estimated by the 32nd round survey may not be revealing the true picture of the set of workers whose service conditions are subject to element of bondedness.

9.1 Probing questions used in the 38th round survey : While keeping the same definition as used in the 32nd round survey for adoption in the 38th round round survey for classification of the population falling into the category of persons working under obligation, a set of probing questions were also introduced in the 38th round to be put to persons categorised as usually 'Working Under Obligation' and also to 'regular employees'. The probing enquiry included questions on their freedom to change their current employers as well as on receipt of prevalent wage rates. The probing enquiry was carried out only in the rural areas. The estimated percentages of persons working under obligation as thrown up by the 38th round data are :

rural male - 0.33 ; rural female - 0.03 ;
 urban male - 0.08 ; urban female - 0.01 .

In the probing enquiry, the first question was about the freedom to change the employers during different seasons of the year. Table (35) gives the distribution of persons working under obligation and regular employees by 'freedom type'.

Table (35) : Percentage distribution of persons (5+) working under obligation and regular employees by type of freedom to change employers.

all-India(rural)

free to change the employers during	persons working under obligation		regular employees	
	male	female	male	female
(1)	(2)	(3)	(4)	(5)
both busy & lean seasons	45.59	55.18	73.52	79.60
busy seasons only	1.17	3.06	1.09	0.87
lean seasons only	3.76	2.38	3.53	1.51
neither busy nor lean seasons	49.48	39.38	21.86	18.02
total	100.00	100.00	100.00	100.00
percentage of persons getting preference for employment	59.88	58.15	66.98	71.67

Of the persons (5+) working under obligation, 49 per cent of the rural males and 39 per cent of the rural females are not free to change their employers during any part of the year. On the other hand, 46 per cent of the males and 55 per cent of the females are free to change their employers at any time during the year. Even among regular employees working in rural India, about 22 per cent of the males and 18 per cent of the females have reported that they are not free to change their employers. This information, of course, may be viewed with reservation as, many among the regular employees (i.e, with permanent positions) are likely to report as not free to change their employers.

The second question in the probing enquiry was regarding receipt of locally prevalent wages. Table (36) gives the relevant results based on the answers obtained to the particular question.

Table (36) : Percentage distribution of persons (5+) working under obligation and regular employees by 'receipt of wage'.

getting locally prevalent wages during	all-India (rural)			
	persons working under obligation		regular employees	
	male	female	male	female
(1)	(2)	(3)	(4)	(5)
both busy & lean seasons	61.86	66.40	85.81	86.89
busy seasons only	3.28	5.42	1.68	1.53
lean season only	5.52	-	1.45	0.77
neither busy nor lean seasons	29.34	28.18	11.06	10.31
total	100.00	100.00	100.00	100.00

In rural India, of the persons working under obligation, 62 per cent of the males and 66 per cent of the females are getting locally prevalent wages during both busy and lean seasons. The corresponding proportions for regular employees are 86 per cent and 87 per cent respectively for males and females.

The persons who are at the most disadvantageous position are those who are not free to change the employers at any time during the year as well not getting prevalent wages. Table (37) gives the distribution of persons who are not free to change their employers neither during the busy nor during the lean seasons by receipt of wage.

Table (37) : Distribution of workers who are not free to change their employers at any time during the year by 'receipt of wages'

all-India (rural)

getting locally prevalent wages during	persons working under obligation		regular employees	
	male	female	male	female
(1)	(2)	(3)	(4)	(5)
both busy and lean seasons	36.86	43.48	63.78	62.06
busy seasons only	0.72	-	2.24	2.00
lean seasons only	10.63	-	2.19	1.48
neither busy nor lean seasons	51.79	56.52	31.79	34.46
total	100.00	100.00	100.00	100.00
percentage of persons not free to change employers neither during busy nor during lean seasons	49.48	39.38	21.86	18.02

Of the persons working under obligation with no freedom to change employers, about 52 per cent of the males and 57 per cent of the females do not get prevalent wages. The corresponding percentages for regular employees are 32 and 34 respectively.

APPENDIX

1. Marginal totals between tables may not exactly agree due to rounding off errors.
 2. Marginal aggregates presented may be used only for combining ratios.

List of codes used in the tables

I. Activity (usual and current) :

A. status :

worked with an employee under obligation but work not specifically compensated by any wage/salary	01-04
worked (self-employed) in household enterprise	11
worked as helper in household enterprise	21
worked as regular salaried/wage employee	31
worked as casual wage labour in public works	41
worked as casual wage labour in other types of work	...	51
did not work though there was work in household enterprise (for current status only)	61
did not work but had regular salaried/wage employment (for current status only)	71
sought work (for current status only)	81
did not work but was seeking and/or available for work (for usual status only)	81
did not seek but was available for work (for current status only)	82
attended educational institutions	91

(II)

attended domestic duties only	92
attended domestic duties and was also engaged in free collection of goods (vegetables, roots, firewood, cattle feed etc.), sewing, tailoring, weaving etc. for household use	93
too young to work/to attend school/to seek employment	...	94
old and disabled	...	95
rentiers, pensioners, remittance recipients etc.	...	96
beggars, prostitutes etc.	...	97
others	98
casual workers who did not work due to temporary sickness (for current status only)	99

B. industry (division) :

agriculture, hunting, forestry & fishing	0
mining and quarrying	1
manufacturing	2 or 3
electricity, gas and water	4
construction	5
wholesale and retail trade and restaurants and hotels	6
transport, storage and communication	7
financing, insurance, real estate and business services	..	8
community, social and personal services	9

II. Industry and Occupation :

Codes as in NIC 1970 and NCO 1968 respectively.

N.D.
