NATIONAL SAMPLE SURVEY : 43RD ROUND (JULY 1907-JUNE 1988)
REPORT ON THE FOURTH QUINQUENNIAL SURVEY ON
CONSUMER EXPENDITURE : PATTERN OF CONSUMER
EXPENDITURE

SECTION ONE

INTRODUCTION

1.0 Data on household consumer expenditure were being collected in every round of the National Sample Survey (NSS), beginning from ~~its first round of survey which started in October, 1950~~ ^(October 1950 - March 1951) through the 26th round (1973-74). After the 26th round of the survey, the Governing Council of NSSO decided that the survey on Consumer Expenditure and Employment & Unemployment, be undertaken together once in five years beginning from the NSS 27th round. Thus, the first quinquennial survey on consumer expenditure was conducted in the 27th round (September '72 - October '73). To meet some specific ad-hoc requirements, a survey on consumer expenditure was also conducted in the 28th round outside this quinquennial programme. The second and third quinquennial surveys on consumer expenditure were, conducted during NSS 32 round (July '77 - June '78) and 36th round (January - December '83) respectively. It was decided to conduct the survey every year from the NSS 42nd round ^{1/} (July '86 - June '87) onwards, although on a relatively smaller scale than what is normally being done in the quinquennial surveys, with a view to building up a time series of consumer expenditure data. The NSS 44th round (July '88 - June '89) was the second survey of the annual series ^{2/} The present report is based on the data collected in the 43 round, that is, the fourth quinquennial survey on consumer expenditure, carried out during the period July '87 - June '88 ^{3/}.

1/ Sarvekshana, Vol. XII, No. 4, Issue No. 39, April-June '69.

2/ The results of 44th round based on the first two sub-rounds were published in special report No. 2 'Key results of consumer expenditure survey' first semi-round (July '88 - December '88) of NSS 44th round; the Report No. 370/2 gives data of the whole round.

3/ The results of the NSS 27th, 32nd and 36th rounds of survey on consumer expenditure have been published in Sarvekshana Vol.II, No. 3, Vol.IX, No. 3 and No. 4 respectively.

A noteworthy feature of this round is that in order to net ✓ in the sample ✓ sufficient number of households belonging to the upper income classes, some significant changes have been made in the sample design of the 43rd round survey.

1.1 As in the case of NSS 38th round, in 43rd round also the results are proposed to be released through a number of separate reports. The present report is the first of the series and gives the basic results relating to the pattern of consumer expenditure by broad groups of items.

1.2 ^{Many} It is ~~to~~ be mentioned here that due to paucity of resources and the need for timely release of data, this and some of the subsequent reports will be based on the data of sub-sample 1 only. (The total sample has been selected in the form of two independent and interpenetrating sub-samples of equal size in 43rd round. See section 2.)

1.3 Contents of this report : This report in section 2 gives briefly the scope, coverage and sample design of the 43rd round survey. Salient features of the conceptual framework and the definitions adopted for the survey are described in section 3. Important summary results are presented in section 4 and explanatory notes on appendix table are given in section 5. Detailed results for States, Union territories and also for all India are presented in the Appendix.

SECTION TWO

SCOPE, COVERAGE AND SAMPLE DESIGN

2.0 Geographical coverage : The 43rd round survey covered the whole of Indian Union excepting (i) Ladakh and Kargil districts of Jammu & Kashmir and (ii) rural areas of Nagaland

2.1 Sample Design : A stratified two stage ^{living} sample design was adopted for the survey with the first stage units as census villages for rural areas and the ~~NSSC~~ urban frame survey blocks for urban areas. Households formed the second stage units in both the rural and urban areas.

2.2 Stratification : Each state/union-territory (U.T.) was divided into one or more agro-economic regions by grouping contiguous districts which are similar with respect to population density and crop pattern. In Gujarat, however, some districts were sub-divided for the purpose of region formation in consideration of the location of dry areas and the distribution of the tribal population in the state. The total number of regions formed in the whole of India was 77. In the rural sector, within each region, each district with 1981 census rural population less than 1.8 million formed a single basic stratum. Districts with larger population were divided into two or more strata, depending on population, by grouping contiguous tehsils, similar as far as possible, in respect of rural population density and crop pattern. (In Gujarat, however, in the case of districts extended over more than one region, even if the rural population was less than 1.8 million, the portion of a district falling in each region constituted a separate stratum. Further, in Assam, the 'basic strata' formed for earlier surveys on the basis of 1971 census rural population, ~~exactly in the above manner,~~ but with cut-off population as 1.5 million, were retained as the strata for rural sampling.) In the urban sector, strata were formed, again within NSS region, on the basis of the population size class of towns. First, each city with population 10 lakhs or more was taken as a self-representative area. The remaining towns of each region were divided into the following four size classes on the basis of population: (1) population less than 50,000, (2) population 50,000 to less than 2 lakhs, (3) population 2 lakhs to less than 4 lakhs and (4) population 4 lakhs to less than 10 lakhs. The towns with population 4 lakhs or more (including the cities with population 1 million or more) were further divided into two parts viz., (a) areas with concentration of the relatively affluent section of the population and

(b) the remaining areas. The strata were then formed as detailed below :

Stratum number	population class of town
(1)	(2)
1	all towns with population less than 50,000
2	" 50,000 -199,999
3	" 200,000 -399,999
4	" 400,000 -999,999 (affluent area).
5	" (other area)
6	a single city with population 1 million and above (affluent area)
7	" (other area)

It may be noted that there was no region with more than one city with population 1 million and above. The stratum numbers were retained as above even if in some regions some of the strata were non-existent. Further, all the urban areas of the union territory of Delhi Municipal Corporation, New Delhi Municipal Corporation, Delhi cantonment area and the villages treated as urban areas in the 1981 census were considered as constituting the city of Delhi.

2.3 Allocation of samples : A total all-India sample of 12974 first stage units (8375 villages and 4599 urban blocks) were first allocated to the states/union territories in proportion to the central field staff available in each of them. The samples thus obtained for each state/u.t. were then re-allocated to the rural and urban sectors of the respective state/u.t. considering the relative sizes of the rural and urban population. Within each state/u.t. the rural samples were again allocated to the rural strata of the state/u.t. in proportion to the rural population in them. Similarly, the urban samples of a state/u.t. were allocated to the urban strata of the state/u.t. in proportion to the urban population in them but with double weightage assigned for those strata comprised of areas inhabited by the relatively affluent sections in the towns with population 4 lakhs or more. All allocations were adjusted such that the sample size for a stratum was atleast a multiple of 4 (preferably multiple of 8) and the total sample size of a region was 8

multiple of 8 for the rural and urban sectors separately to have equal samples in each sub-sample and sub-round.

2.4 Selection of first stage units : In the rural sector, the sampling frame was 1981 census list of villages in most cases. However, in some areas where either 1931 census was not undertaken or the available list was highly deficient, 1971 census frames were used. In the urban sector, the sampling frames used were the block lists of the most recent NSS urban frame survey available for each town. The sample villages were selected circular systematically with probability proportional to size (population) in the form of two independent sub-samples. The sample blocks were selected circular systematically with equal probability, also in the form of two independent sub-samples.

2.5 Selection of second stage units (households) : In order to ensure adequate representation of households from the affluent section of the society in the sample, the following procedures were adopted for selection of sample households. In the rural sector, in each sample village the households were first grouped into two sub-strata. Sub-stratum 1 consisted of 8 or 10 relatively most affluent households depending on whether the sample village had less than 80 households or 80 or more households. The remaining households formed sub-stratum 2. Two sample households were selected from sub-stratum 1 circular systematically with a random start. In case of sub-stratum 2, before selection of the sample, the households were grouped into three means of livelihood (m.l) classes; namely, (1) self-employed in non-agriculture, (2) rural labour and (3) others on the basis of the income during the 365 days preceding the date of survey. The households of the last class were again grouped into five land possessed classes, viz., households possessing (1) less than 1 acre, (2) 1 to 2.49 acres, (3) 2.5 to 4.99 acres, (4) 5 to 9.99 acres and (5) 10 acres and above. Eight households were then selected, also circular systematically with a random start, after arranging the households belonging to the different groups in a continuous manner. In the urban sector also, two sub-strata of households were formed in each sample block. In all the cities with population 10 lakhs or more, households with Rs. 1000/- or more as monthly per capita expenditure (MPCE) constituted sub-stratum 1 and the remaining households constituted sub-stratum-2. On the other hand in the towns with population less than 10 lakhs, sub-stratum-1 consisted of households with Rs. 800/- or more as MPCE and the rest constituted sub-stratum-2. For selection of the sample households, all the households of sub-stratum-2 were first grouped into four means of livelihood classes namely (a) self-employed, (b) regular

Contd....

wage/salary earning, (c) casual labour and (d) others. The households of the groups (a) and (b) were again re-grouped as belonging to three monthly per capita expenditure levels - (i) less than 'A', (ii) 'A' to 'B' and (iii) above 'B' where A and B were the MPCE cutoff levels obtained separately for each state and union-territory such that the population with MPCE less than A, A to B and above B respectively consisted of approximately the lowest 30 per cent, the middle 60 per cent, and the top 10 per cent. The sample households were then selected after arranging the households belonging to the different groups in a specified manner. In the blocks belonging to the strata consisting of affluent area, 4 sample households were selected from sub-stratum-1 and 6 households from sub-stratum-2. In the blocks belonging to the remaining strata, 2 households were selected from sub-stratum-1 and 8 households from sub-stratum-2. The required number of sample households were selected circular systematically with a random start separately from each sub-stratum.

2.6 Survey period and sub-rounds : The field work for the survey was started in the month of July 1987 and was completed in June 1988. The entire survey period of one year was divided into four sub-rounds of three months duration coinciding approximately with the four seasons. The four sub-round periods were as follows :

Sub-round 1	: July 87 - September 87
Sub-round 2	: October 87 - December 87
Sub-round 3	: January 88 - March 88
Sub-round 4	: April 88 - June 88

The samples were distributed over the four sub-rounds in a manner so as to provide equally valid estimates for the country for each of the sub-round periods separately.

in Sub-sample 1

2.7 Sample size : In all, the survey covered about 64.3 thousands households spread over about 4134 sample villages and 2298 sample blocks. Statement O gives the distribution of sample villages/blocks allotted and surveyed and the number of sample households and persons surveyed for each state and union-territory.

NSS 43rd Round (July '87 - June '88)

STATEMENT 0 : Number of villages/blocks allotted and surveyed and number of sample households and persons surveyed*

state/union territory	no. of villages		no. of blocks		no. of hhs. surveyed		no. of persons surveyed

* Relates to sub-sample 1 only

** Nucleus villages. The ultimate sample size was about four times this.

2.8 Estimation procedure - The estimation procedure adopted in the NSS 43rd is based on weighted sum of the sample values.

Denoting by \hat{Y} the unbiased estimate of Y (the state/region total of any variate), it is given by :

$$\hat{Y} = \sum_s \frac{P_s}{n_s} \sum_{i=1}^{n_s} \frac{D_{si}}{C_{si}} \sum_{k=1}^2 \frac{H_{sik}}{h_{sik}} \sum_{j=1}^h \frac{h_{sik}}{h_{sik}} y_{sikj} \quad (1)$$

for the rural sector except Arunachal Pradesh;

$$\hat{Y} = \sum_s \frac{N_s}{n_s} \sum_{i=1}^{N_s} \sum_{k=1}^2 \frac{H_{sik}}{h_{sik}} \sum_{j=1}^{h_{sik}} y_{sikj} \quad (2)$$

for rural Arunachal Pradesh

$$\hat{Y} = \sum_s \frac{N_s}{n_s} \sum_{i=1}^{N_s} D_{si} \sum_{k=1}^2 \frac{H_{sik}}{h_{sik}} \sum_{j=1}^h \frac{h_{sik}}{h_{sik}} y_{sikj} \quad (3)$$

for the urban sector, where s, i, j and k are suffixes for stratum, village/block, household and sub-stratum respectively;

P_s , N_s and n_s give the stratum values of selection population, number of villages/blocks in the frame and number of sample villages/blocks respectively;

D_{si} , C_{si} stand for number of hamlet - groups/sub-blocks formed, number of census villages contained in a revenue village actually surveyed and the selection population of the sample village respectively;

H_{sik} and h_{sik} stand for the total number of households listed and the number of sample households respectively and y_{sikj} is the observed value of the variate of a sample household.

2.9 Estimates of ratios . The estimate of a ratio of the form :

$R = Y/X$ is given by

$$\hat{R} = \hat{Y}/\hat{X}, \text{ where}$$

\hat{Y} & \hat{X} are obtained using the formulae already given at the

level at which \hat{R} is required. That is to say if \hat{R} is required at state level, \hat{Y} and \hat{X} are first obtained at state level and then \hat{R} will be obtained by division. Examples of ratios are rates and percentages.

2.10 Sub-sample and sub-round estimates : The estimates of aggregates of a given sub-sample/sub-round are computed using the same formulae as given above with the only modification that the tabulation is restricted to the sample f.s.u.'s of that sub-sample/sub-round. The value of n to be used in this case is the number of f.s.u.'s of the sub-sample sub-round in question available for tabulation. The combined sample estimate of aggregate is based on the whole sample and not computed as the average of the sub-sample/sub-round estimates.

SECTION THREE

CONCEPTS AND DEFINITIONS

3.0 The concepts and definitions followed in the consumer expenditure enquiries continued to remain broadly the same as in the earlier NSS rounds. Some of these concepts and definitions are described below :

3.1 Household : A group of persons normally living together and taking food from a common kitchen constitute a household. A boarding house, a hostel or a hotel is treated as a cluster of households, where each individual boarder (with his dependents and guests) forms a household. Households fed directly by some institutional bodies such as those in prisons, police quarters, cantonments, hospitals, asylums, relief camps are, however, excluded from the scope of the survey. Floating population on having no normal place of residence and foreign nationals' households are also excluded.

3.2 Household members : Any person who is a normal resident of the sample household is considered to be a member of the household. Household members are grouped into three categories viz., adult male, adult female and child. One who has already attained the age of 15 (in completed years) is considered as an adult. Any person who usually lives and takes the principal meals with the household is considered a member of the household.

3.3 Household size : The total number of members (as defined above) in a household is considered to be the size of the household

3.4 Household consumer expenditure : The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. The household consumer expenditure is the total ~~of the monetary value~~ of consumption of various groups of items, namely (i) food, pan (betel leaves), tobacco, intoxicants and fuel & light, (ii) clothing and footwear and (iii) miscellaneous goods and services and durable articles.

For groups (i) and (ii), the total value of consumption is derived by aggregating the monetary value of goods actually consumed during the reference period. An item of clothing and footwear would be considered to have been consumed, if it is brought into maiden or first use during the reference period. The consumption may be out of (a) purchases made during the reference period or earlier; (b) home grown stock; (c) receipt in exchange of goods and services; (d) any other receipt like gift, charity, borrowing and (e) free collection. For evaluating the consumption of the items of group (iii) i.e. items categorised as miscellaneous goods and services and durable articles, a different approach is followed. In this case, the value of actual purchase i.e. the expenditure made during the reference period for the purchase of goods and services is considered as consumption.

It is pertinent to mention here that the consumer expenditure of a household on food items relate to the actual consumption made by the normal resident members of the household and also by the guests whether during ceremonies or otherwise. To avoid double counting, transfer payments like charity, loan, advance etc., made by the household are not considered as consumption for items of groups (i) and (ii), since transfer

receipt of these items have been taken into account. However, the item "cooked meals" is an exception to the rule. Meals prepared in the household kitchen and provided to the employees and/or others would automatically get included in domestic consumption of employer (payer) household. There is a practical difficulty of estimating the quantities and values of individual items used for preparing the meals served to employees or to others. Thus, to avoid double counting, cooked meals received as perquisites from employer household or as gift or charity are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for the consumption of the normal resident members or for the guests and employees will also be recorded in the purchaser household. This procedure of recording cooked meals served to others in the expenditure of the serving households only leads to bias-free estimates of average per capita consumption as well as total consumer expenditure. However, as the proportions of donors and recipients of free cooked meals are likely to vary in opposite directions over the expenditure classes, the nutritional intake derived from the consumer expenditure survey data may present a somewhat distorted picture. These derived nutrition intakes may get inflated for the rich (net donors) and somewhat understated for the poor (net recipients). This point has to be kept firmly in mind while using the NSS consumer expenditure data for any nutritional study.

3.5 Reference period : The reference period for collection of data on all items of consumer expenditure is last 30 days (ending on the day preceding the date of enquiry). (For some non-food items data were collected also for the last 365 days; but this report is based on data collected for the last 30 days for all items.)

3.6 Monthly per capita expenditure (MPCE) : The total consumer expenditure of a household divided by the household size is taken as the monthly per capita expenditure (MPCE) of the household and its members.

3.7 Monthly per capita expenditure class : The households and persons are classified according to their monthly per capita expenditure. The expenditure classes (in rupees) have been arranged in ascending order of their magnitudes. The derived MPCE levels are grouped into 12 classes. For presentation of the 43rd round results, the grouping formulated on the basis of a trial tabulation of the NSS 43rd round data have been adopted. The groups were formulated in such a way as to obtain approximately 5 percent of the population each in the first two and the last two classes and 10 percent each in the middle eight classes. Such a formulation has led to different expenditure classes for rural and urban areas.

The MPCE classes for rural areas are :

Srl. no.	monthly per capita expenditure (MPCE) class (in rupees)	Srl. no.	monthly per capita expenditure (MPCE) class (in rupees)
(1)	(2)	(1)	(2)
1	less than 65	7	140 - 150
2	65 - 80	8	160 - 180
3	80 - 95	9	180 - 215
4	95 - 110	10	215 - 280
5	110 - 125	11	280 - 385
6	125 - 140	12	385 & above
		13	all classes

The MPCE classes for the urban areas are :

Srl. no.	Monthly per capita expenditure (MPCE) class (in rupees)	Srl. no.	monthly per capita expenditure (MPCE) class (in rupees)
(1)	(2)	(1)	(2)
1	less than 90	8	255 - 310
2	90 - 110	9	310 - 385
3	110 - 135	10	385 - 520
4	135 - 160	11	520 - 700
5	160 - 185	12	700 & above
6	185 - 215	13	all classes
7	215 - 255		

It has been decided that once in every five years, the MPCE classes will thus be objectively formulated on the basis of

trial tabulation of the quinquennial round data. These classes will be retained for the subsequent four annual rounds with a view to studying the shift in the distribution of the population. As the classes are different for the rural and urban areas, it becomes difficult to combine the rural and urban results or compare the rural distribution with the urban distribution. It was, therefore, decided that with some adjustments, at least four comparable expenditure levels should be provided in both the rural and urban groupings. Thus, the 43rd round rural and urban results can be compared for the following expenditure classes: (i) less than 110, (ii) 110-215, (iii) 215-385 and (iv) 385 & above.

SECTION FOUR
SUMMARY OF FINDINGS

4.0 Some important findings of the survey on the basis of the results of sub-sample I are discussed in the following paras. The subjects that will be considered here are :- average number of persons in the household; per thousand distribution of households and persons by monthly per capita expenditure (MPCE) class; average monthly per capita consumer expenditure on broad groups of items and percentage of expenditure on food items to total expenditure. Estimates for states and all-India in respect of both rural and urban areas will be examined. In addition to these, value of consumption on broad groups of items per person by different NSS quinquennial rounds and percentage share of broad groups of items in total consumer expenditure by MPCE classes are presented for both the rural and urban sectors. The detailed tables for all-India, states and union territories (rural and urban) are given in the appendix. It may be mentioned here that the estimates of all-India presented in this report do not cover the rural areas of Nagaland and urban areas of Dadra & Nagar Haveli.

4.1 Households and persons : The statement-I gives per thousand distribution of households and persons and average number of persons per household by monthly per capita expenditure (MPCE) classes for rural and urban sectors at the all-India level. In addition to these, number of sample households and persons over MPCE classes are also shown in this statement. It is seen that the proportion of households and persons are relatively higher in the MPCE class of Rs. 95 - 110 for the rural area whereas the proportion of households are uniformly higher in the MPCE classes of Rs. 125 - 255 and Rs. 255 - 310 and that of persons are relatively much higher in the MPCE class of Rs. 135 - 160 in case of urban sector. The average number of persons per household in rural India is 5.08 while in urban India it is 4.71. It may be mentioned that the corresponding

estimates were 5.20, 5.22 and 5.22 for the rural areas and 4.81, 4.89 and 4.72 in the urban areas respectively, during the 38th, 32nd and 27th rounds. It is also observed that the household size decreased with increasing MPCE for both the rural and urban sectors. They remain almost the same for the lowest three MPCE classes in both the sectors.

4.2 Pattern of consumer expenditure : Statement II gives average monthly per capita consumer expenditure along with the percentage of expenditure on food items to total consumer expenditure for all classes pooled for each state, union territory and all-India. This is followed by a comparative picture of per ^{capita} value of consumption and consumer expenditure as percentage to total consumer expenditure by broad groups of items over different NSS quinquennial rounds (only for all-India & all classes pooled) (Statements III and IV). Lastly, the pattern of consumer expenditure at all-India level by MPCE classes has been studied for the current round.

✓
(1) Consumer expenditure over states : The total consumer expenditure per person and percentage of expenditure on food items for rural and urban areas separately are presented in statement II for each state, union territory and all-India. In the rural sector, states reporting very high consumer expenditure are Delhi (Rs. 372.43) followed by Chandigarh (Rs. 275.56), Andaman & Nicobar Islands (Rs. 272.33) and Lakshadweep (Rs. 262.83) against the national average of Rs. 158.10. Leaving aside the small states and U.T's, however, the states with the highest consumer expenditure in the rural sector are Punjab, Haryana and Kerala. The states/u.t's reporting very low expenditure are Dadra & Nagar Haveli (Rs. 114.47), Orissa (Rs. 127.51), Bihar (Rs. 136.57) and Madhya Pradesh (Rs. 141.98). In the urban sector, states reporting high consumer expenditure are Delhi (Rs. 485.51), Chandigarh (Rs. 436.91), Andaman & Nicobar Islands (Rs. 419.69) and Nagaland (Rs. 367.00) against the National average of Rs. ~~250.65~~.

STATEMENT II : Average monthly per capita consumer expenditure and percentage of expenditure on food items by states

state/union territory	value (Rs.0.00) of total consumption per person for 30 days		percentage of expenditure on food items

All India	158.10	250.83	63.77	56.03

-No survey; * No urban area

24992

55.91

the total consumer expenditure is comparatively low are Bihar (Rs. 186.48), Manipur (Rs. 200.31), Pondicherry (Rs. 210.46) and Uttar Pradesh (Rs. 216.73). In the urban sector, Haryana, Maharashtra, Punjab and Kerala, besides many small states and U.T's, are having expenditure above the all-India average. Further, the states reporting high percentage of expenditure on food items in the rural sector are West Bengal (71.01%) followed by Assam (70.16%), Bihar (69.69%), Gujarat (69.09%), Tripura (68.96%) and Orissa (68.89%) against 63.77% at all-India level. Those reporting low percentage are Chandigarh (51.26%), Pondicherry (55.54%), Mizoram (56.75%), Delhi (57.22%) and Punjab (57.56%). In the urban sector, the highest percentage of expenditure on food items is reported by Arunachal Pradesh (70.44%) which is followed by Lakshadweep (63.37%), Tripura (64.35%), Bihar (63.88) and Haryana (63.12%) against 56.03% at all-India level. On the other hand, the lowest percentage is reported by Chandigarh (43.47%) followed by Delhi (43.91%), Andaman & Nicobar Islands (48.41%), Himachal Pradesh (52.42%) and Andhra Pradesh (52.77%). The proportion of expenditure on food ^{tends} to decrease with increasing total expenditure.

(ii) Another interesting comparison among the states can be made using the rural-urban difference in consumption expenditure. Per capita expenditure in urban sector expressed as a percentage of the same in rural sector will serve as an index for this comparison. The following table gives this index for each state/u.t. and all-India.

Narayan/

per capita total expenditure in the urban sector as percentage of that in the rural sector (I) for each state/u.t. and all-India

state	I	state	I
(1)	(2)	(1)	(2)
1. Andhra Pradesh	144	17. Sikkim	163
2. Assam	176	19. Tamilnadu	162
3. Bihar	137	19. Tripura	140
4. Gujarat	149	20. Uttar Pradesh	146
5. Haryana	117	21. West Bengal	166
6. Himachal Pradesh	165	22. Andaman & Nicobar Islands	154
7. Jammu & Kashmir	133	23. Arunachal Pradesh	118
8. Karnataka	149	24. Chandigarh	158
9. Kerala	126	25. Delhi	131
10. Madhya Pradesh	166	26. Goa, Daman & Diu	180
11. Maharashtra	174	27. Lakshadweep	87
12. Manipur	105	28. Mizoram	132
13. Meghalaya	190	29. Pondicherry	135
14. Orissa	177	30. All-India	150 158
15. Punjab	111		
16. Rajasthan	134		

Except for Lakshadweep the index is greater than 100 for all state/u.t.'s and all-India. Excluding this u.t., the index varies from 105 (Manipur) to 190 (Meghalaya). ~~Perhaps this ratio may have a high positive correlation with the urge of the rural population for migrating to the towns (rural to urban pull, if one may say so).~~

(iii) Consumer Expenditure over time : The consumer expenditure on broad groups of items and their percentage to total consumer expenditure are presented in statement III and IV respectively at all-India level, for all the four quinquennial rounds (i.e. 27th, 32nd, 39th and 43rd rounds). From statement III it is found that the expenditure of all the items have increased over

NSS 43RD ROUND (JULY 1987 - JUNE 1988)

16. clothing	6.65	6.59	6.69	7.00	6.00	7.72	7.05	5.27	
17. foot-wear	0.93	0.99	0.74	0.52	1.08	1.11	0.61	0.41	
18. misc, goods & services	14.41	12.52	10.34	8.69	23.46	20.42	14.61	19.22	
19. durable goods	3.57	2.32	7.00	2.15	4.24	2.74	8.09	2.21	
20. non-food total : (14-19)	36.23	34.45	35.66	27.03	44.03	41.31	40.01	35.51	
21. total expenditure (13+20)	100.00	100.00	100.00	100.00	100.00	100.00	100.00	100.00	
22. average household size	5.03	5.20	5.22	5.22	4.71	4.31	4.39	4.72	

the rounds, beginning from the 27th round for both rural and urban sectors which is obviously due to the rise in prices. Thus the expenditure incurred on total food has risen from Rs. 32/- in 27th round to Rs. 44/- in 32nd round to Rs. 74/- in 38th round to Rs. 101/- in 43rd round in the rural areas. The corresponding figures for the urban areas are Rs. 97/- in 27th round to Rs. 58/- in 32nd round to Rs. 97/- in 38th round to Rs. 140/- in 43rd round. In terms of percentage, there has been a substantial fall in the proportion of expenditure on cereals over these rounds from 41 percent in 27th round to 33 percent in 32nd round to 32 percent in 38th round to 26 percent in 43rd round in rural sector. The corresponding figures for urban areas are 23 percent, 20 percent, 19 percent and 15 percent respectively. In the food group it is seen that while, in general there is a fall in percentage of expenditure on the items of food including total food for some items such as vegetables, edible oils, milk and milk products, meat, egg and fish and fruits and nuts, there is a slight rise in the percentage of expenditure over these rounds. The proportion of expenditure on fuel and light has consistently increased over the rounds in the rural sector while in the urban sector it is increasing upto 38th round and then shows a slight fall in 43rd round. In the case of clothing, the proportion is uniformly increasing upto 38th round for both rural and urban sectors, while in 43rd round there is a substantial fall in both the sectors. Again for foot-wear there is an increasing trend upto 38th round but the proportion remains almost the same in 43rd round as compared to 38th round. The expenditures on misc. goods & services and on durable goods have also gone up over NSS rounds except 32nd round. It may be noted that the expenditure incurred on 'miscellaneous goods & services' and 'durable goods' in the 32nd round do not fit into this pattern. The reason may be that in the 32nd round some of the items have been taken out of 'miscellaneous goods & services' block and then included under the block of 'durable goods'.

(iv) Consumer expenditure by monthly per capita expenditure classes : Consumer expenditure as percentage to total consumer expenditure by broad groups of items has been presented,

Narayan/

NSS 43RD ROUND (JULY 1987 - JUNE 1988)

at the all-India level, separately for rural and urban areas in statements V & VI respectively. The average expenditure on food for rural and urban areas are found to be 64 % and 56% of the total expenditure respectively. The percentage on cereals, vegetables, salt and spices is found to fall gradually with the rise in expenditure level for both the sectors. All other items of food show an increasing trend at least in the beginning of expenditure class and in some cases fall after a certain expenditure class. The percentage of expenditure on pulses and edible oil show an increasing trend upto the expenditure class Rs. 80-95 and Rs. 95-110 respectively for rural sector whereas in the urban sector it is upto Rs. 90-110 and Rs. 160-185 respectively after which it gradually decreases. For other items like gram, milk & milk product, fruits & nuts and beverages and refreshment, the percentage expenditure goes on increasing with the rise in expenditure class in the case of rural areas while in the urban areas the increase is only for fruits & nuts and beverages & refreshments.

For non-food items, the proportion of expenditure on clothing, foot-wear, misc. goods and service and durable goods has an increasing trend through out where as for pan, tobacco and intoxicants and fuel and light, it is just opposite for both rural and urban sectors.

Some of the important results of the survey have been discussed above. Detailed tables for the states and union territories are given in the Appendix.

Narayan/

SECTION FIVE.

EXPLANATORY NOTES ON TABLES

5.0 Table 1 series give the distribution of (i) number of sample households (ii) per 1000 distribution of estimated number of households and persons and (iii) average household size (number of adult males, adult females and children) for each monthly per capita expenditure class (MPCE).

5.1 Table 2 series give value by broad groups of items of consumption per person for a period of 30 days by MPCE class. Estimates are given for 19 broad groups of items. The groups are (1) cereals; (2) grain; (3) cereal substitutes; (4) pulses and products; (5) milk and products; (6) edible oil; (7) meat, egg and fish; (8) & vegetables; (9) fruits and milk; (10) sugar; (11) salt; (12) spices; (13) beverages and refreshments; (14) pan, tobacco & intoxicants; (15) fuel and light; (16) clothing; (17) foot-wear; (18) miscellaneous goods and services (including rents and taxes); and (19) durable goods. The expenditure for food, non-food and total consumer expenditure are also presented.
