REPORT NO. 384

REPORT ON THE FOURTH QUINQUENNIAL SURVEY  
ON CONSUMER EXPENDITURE :  
CONSUMPTION OF CLOTHING, FOOTWEAR AND DURABLE GOODS  
(WITH MONTH AND YEAR AS REFERENCE PERIOD)

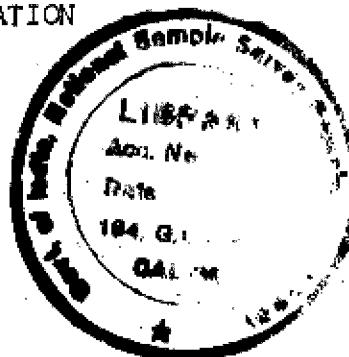

NSS 43RD ROUND (JULY 1987 - JUNE 1988)

MAY 1992

NATIONAL SAMPLE SURVEY ORGANISATION

DEPARTMENT OF STATISTICS

GOVERNMENT OF INDIA

NEW DELHI

The National Sample Survey Organisation (NSSO) has been collecting data on household consumer expenditure through sample surveys since 1950. The objective of this survey was to fill up the data gaps for the purpose of National Income estimation. Through these surveys NSSO has provided a good data base on consumer expenditure.

After 26th round of NSS, the Governing Council of NSSO decided that the surveys on consumer expenditure would be repeated once in every five years in order to accommodate the needs of data on other important subjects of enquiry. Under this programme, the first quinquennial survey on consumer expenditure was conducted in 27th round (1972-73) and since then in every five yearly interval it was repeated in 32nd round (1977-78), in 38th round (1983) and in 43rd round (1987-88). In order to meet some ad-hoc requirement, a survey on consumer expenditure was also conducted in NSS 28th round (1973-74). The basic concepts, definitions and the methods of data collection and estimation procedure remained almost the same throughout this period.

The NSS 43rd round survey on consumer expenditure was conducted in July 1987 to June 1988 covering 8518 sample villages and 4648 sample blocks and 10 schedules on consumer expenditure were canvassed in each sample village and block. A noteworthy feature here is that in order to net sufficient number of sample households from upper income classes, some changes in the sample design have been incorporated in this round. Some results based on data of sub-sample 1, NSS 43rd round have already been published in Sarvekshana, Vol. XV No.1, ~~Issue No.4~~, July-Sept. 1991.

Three reports have been planned on combined results of sub-samples 1 and 2 together. First report no.383, entitled "consumption pattern of different socio-economic categories of households" based on data of both sub-samples 1 & 2 combined have already been prepared. This report is the second one in the series.

Besides concepts, definitions, sample design and estimation procedure of NSS 43rd round, important results on pattern of consumer expenditure for clothing, footwear and durable goods based on month and year reference periods and the influence of these estimates on total consumer expenditure are also presented in this report for different States/UTs and all-India.

The members of the Governing Council and Working Group, Field Operation Division, Data Processing Division, Survey Design & Research Division and Computer Centre have contributed in shaping this report in the present form. I am really happy to record my appreciation to all of them.

Any comments/suggestions for improvement of this report are welcome.

Calcutta  
28th February 1992.

S. Ray  
Director, SDRD

M.S.R/7

List of the members of the Working Group on the NSS 43rd round surveys

1. Prof. Pravin Visaria, Director, Gujarat Institute of Area Planning, Gota, Ahmedabad.	Chairman
2. Prof. A.V. Vaidyanathan, Centre for Development Studies, Prasantha Hill, Ullor, Askulum Road, Trivandrum-695011.	Member
3. Prof. K. Sundaram, Delhi School of Economics, University of Delhi, Delhi-110007.	Member
4. Prof. N. Shattacharya, Indian Statistical Institute, 203, B.T. Road, Calcutta-700035.	Member
5. Prof. T.J. Rao, Indian Statistical Institute, 203, B.T. Road, Calcutta - 700035.	Member
6. Dr. (Mrs.) R. Thamarajakshi, Adviser(LEM), Planning Commission, New Delhi.	Member
7. Shri S.M. Vidwans*, Director of Economics & Statistics, Govt. of Maharashtra, Bombay.	Member
8. Shri K. Lakshminarayana, Director, Bureau of Economics & Statistics, Govt. of Andhra Pradesh, Hyderabad.	Member
9. Shri N.K. Rajagopalan, Executive Director, Computer Centre, Deptt. of Statistics, New Delhi.	Member
10. Shri S. Natarajan, Joint Director, Central Statistical Organisation, New Delhi.	Member
11. Shri S. Ray, Director, Data Processing Division, NSSO, Calcutta.	Member
12. Shri M. Neelakantan, Officer-on-special Duty, Field Operations Division, NSSO, New Delhi.	Member
13. Shri H.L. Jain, Deputy Director, Field Operations Division, NSSO, Jaipur.	Member
14. Shri S. Sengupta**, Officer-on-Special Duty, Survey Design & Research Division, NSSO, Calcutta.	Convener

---

Group

A Sub-Group of the Working Group was set up to finalise the tabulation plan on the NSS 43rd round surveys. The sub-group consists of the following members.

1. Prof. Pravin Visaria, Chairman
2. Shri S. Sengupta, Member
3. Shri Paul Jacob, Convenor
4. Shri K.P. Chatterjee, DD, SDRD, NSSO.

\* Shri V.D. Mahajan was subsequently co-opted in the place of Shri S.M. Vidwans.

\*\* On retirement of Shri S. Sengupta, Shri Paul Jacob, Jt. Director was co-opted as the convener.

NATIONAL SAMPLE SURVEY : 43RD ROUND (JULY 1987-JUNE 1988)

REPORT ON THE FOURTH QUINQUENNIAL SURVEY ON CONSUMER EXPENDITURE :  
CONSUMPTION OF CLOTHING, FOOTWEAR AND DURABLE GOODS

(WITH MONTH AND YEAR AS REFERENCE PERIOD)

SECTION ONE

INTRODUCTION

1.0 Data on household consumer expenditure were being collected in every round of the National Sample Survey Organisation(NSSO),beginning from the first round (October 1950 - March 1951) through the 28th round (1973-74). After the 26th round of the survey, the Governing Council of NSSO decided that the survey on Consumer Expenditure and Employment & Unemployment, be undertaken together once in five years beginning from the NSS 27th round. Thus, the first quinquennial survey on consumer expenditure was conducted in the 27th round(Sept'72 - Oct'73). To meet some specific ad-hoc requirements, a survey on consumer expenditure was also conducted in the 28th round outside this quinquennial programme. Thesecond, third and fourth quinquennial surveys on consumer expenditure were conducted during NSS 32nd round (July '77 - June '78), 38th round(January - December'83) and 43rd round (July '87 - June '88) respectively.

The present report is based on the entire data(sub-sample 1 & 2) collected on consumer expenditure in the 43rd round survey.

1.1 In the 43rd round, data on consumer expenditure were collected from about 1.28 lakh of sample households from rural and urban areas. Considering the volume of tabulation, some tables giving important key results were first generated on a priority basis from the date of sub-sample 1. Three reports 2/ based on these priority tables thus generated, have already been released and the results have been brought out in Sarvekshana Vol.XV, No.1, July - Sept'91.

---

1/ The results of the NSS 27th, 32nd & 38th rounds of survey on consumer expenditure have been published in Sarvekshana Vol. II, No. 3, Vol. IX, No. 3 and No. 4 respectively.

1.2 A second set of tables of the overall tabulation scheme was subsequently generated from the data of sub-samples<sup>1</sup> and 2 combined. It was planned to prepare three reports based on this set of tables. The first report <sup>2/</sup> of this series gives the results on the pattern of consumer expenditure of different socio-economic categories of households. The present one is the second of this series and gives the basic results on the consumption pattern of 'clothing', 'footwear' and 'durable goods'. QT

1.3 In the NSS 43rd round, data were collected on household consumer expenditure on (i) food items including pan, tobacco, intoxicants, fuel & light, (ii) miscellaneous goods and services and (iii) clothing, footwear and durable goods. Information on items of (i) and (ii) was collected only for the reference period of last 30 days and on items (iii) information was collected for both the reference periods of last 30 days and 365 days. The objective of the present study is to examine to what extent the estimates of clothing, footwear and durable goods based on month reference period are different from that based on year reference period and how these estimates influence on those of total consumer expenditure of the household.

1.4 This report contains four sections and two appendices. Section One is the introduction that describes some general aspects. Section two gives, in brief, the sample design adopted for the survey and the estimation procedure. While section three gives some salient features of the conceptual framework and the definitions adopted for the survey, section four presents important/<sup>summary</sup> results. Appendix I gives the detailed tables for all-India and Appendix II provide a facsimile copy of the sch. 1.O canvassed in the 43rd round survey.

---

<sup>2/</sup> The results of the NSS 43rd round based on sub-sample 1 were published through the following report numbers:

- Report on the fourth quinquennial survey on consumer expenditure.
- No. 372 : "Pattern of consumer expenditure".
- No. 373 : "Particulars of dwelling units".
- No. 374 : "Patterns of consumption of cereals, pulses, tobacco and some other selected items".

<sup>3/</sup> Report No.383 : "Pattern of consumer expenditure of different socio-economic categories of households".

SECTION TWO  
SCOPE, COVERAGE AND SAMPLE DESIGN

2.0 A noteworthy feature of this round is that in order to net a sufficient number of households belonging to the affluent section of the society, some significant changes have been made in the sample design of the 43rd round survey. Details of the geographical coverage, sample design etc., are given below :

2.1 Geographical Coverage : The 43rd round survey covered the whole of Indian Union excepting (i) Ladakh and Kargil districts of Jammu & Kashmir and (ii) rural areas of Nagaland.

2.2 Sample Design : A stratified two stage sampling design was adopted for the survey with the first stage units as census villages for rural areas and the urban frame survey blocks for urban areas. Households formed the second stage units in both the rural and urban areas.

2.3 Stratification : Each state/union-territory (U.T.) was divided into one or more agro-economic regions by grouping contiguous districts which are similar with respect to population density and crop pattern. In Gujarat, however, some districts were sub-divided for the purpose of region formation in consideration of the location of dry areas and the distribution of the tribal population in the state. The total number of regions formed in the whole of India was 77. In the rural sector, within each region, each district with 1981 census rural population less than 1.8 million formed a single basic stratum. Districts with larger population were divided into two or more strata, depending on population, by grouping contiguous tehsils, similar as far as possible, in respect of rural population density and crop pattern. In Gujarat, however, in the case of districts extended over more than one region, even if the rural population was less than 1.8 million, the portion of a district falling in each region constituted a separate stratum. Further, in Assam, the 'basic strata' formed for the earlier surveys o

the basis of 1971 census rural population, but with cut-off population as 1.5 million, were retained as the strata for rural sampling. In the urban sector, strata were formed, again within NSS region, on the basis of the population size ~~of~~<sup>class</sup> of towns. First, each city with population 10 lakhs or more was taken as a self-representative area. The remaining towns of each region were divided into the following four size classes on the basis of population : (1) population less than 50,000, (2) population 50,000 to less than 2 lakhs, (3) population 2 lakhs to less than 4 lakhs and (4) population 4 lakhs to less than 10 lakhs. The towns with population 4 lakhs or more (including the cities with population 1 million or more) were further divided into two parts viz., (a) areas with concentration of the relatively affluent section of the population and (b) <sup>the</sup> remaining areas. The strata were then formed as detailed below :

stratum number	population class of town
(1)	(2)
1	all towns with population less than 50,000
2	" 50,000 - 199,999
3	" 200,000 - 399,999
4	" 400,000 - 999,999 (affluent area)
5	" (other area)
6	a single city with population 1 million and above (affluent area)
7	(other area)

It may be noted that there was no region with more than one city with population 1 million and above. The stratum numbers were retained as above even if in some regions some of the strata were non-existent. Further, all the urban areas of the union territory of Delhi Municipal Corporation, New Delhi Municipal Corporation, Delhi cantonment area and the villages treated as urban areas in the 1981 census were considered as constituting the city of Delhi.

2.4 Allocation of samples : A total all-India sample of 13166 first stage units (8518 villages and 4648 urban blocks) were first allocated to the states/states/union territories in proportion to the central field staff available in each of them. Then samples thus obtained for each state/u.t. were then re-allocated to the rural and urban sectors of the respective state/u.t. considering the relative sizes of the rural and urban population. Within each state/u.t. the rural samples were again allocated to the rural strata of the state/u.t. in proportion to the rural population in them. Similarly, the urban samples of a state/u.t. were allocated to the urban strata of the state/u.t. in proportion to the urban population in them but with double weightage assigned for those strata comprised of areas inhabited by the relatively affluent sections in the towns with population 4 lakhs or more. All allocations were adjusted such that the sample size for a stratum was at least in multiple of 4 (preferably multiple of 8) and the total sample size of a region was a multiple of 8 for the rural and urban sectors separately to have equal samples in each sub-sample and sub-round.

2.5 Selection of first state units : In the rural sector, the sampling frame was 1981 census list of villages in most cases. However, in some areas where either 1981 census was not undertaken or the available list was highly deficient, 1971 census frames were used. In the urban sector, the sampling frames used were the block lists of the most recent NSS urban frame survey available for each town. The sample villages were selected circular systematically with probability proportional to size (population) in the form of two independent sub-samples. The sample blocks were selected circular systematically with equal probability, also in the form of two independent sub-samples.

2.6 Selection of second stage units (households) : In order to ensure adequate representation of households from the affluent section of the society in the sample, the following procedures were adopted for selection of sample households. In the rural sector, in each sample village the households were first grouped into two sub-strata. Sub-stratum 1 consisted of 8 or 10 relatively most affluent households depending on whether the sample village had less than 80 households or 80 or more households. The remaining households formed sub-stratum 2. Two sample households were selected from sub-stratum 1 circular systematically with a random start. In case of sub-stratum 2, before selection of the sample, the households were grouped into three means of livelihood (m.l.) classes; namely, (1) self-employed in non-agriculture, (2) rural labour and (3) others on the basis of the income during the 365 days preceding the date of survey. The households of the last class were again grouped into five land possessed classes, viz., households possessing (1) less than 1 acre, (2) 1 to 2.49 acres, (3) 2.5 to 4.99 acres, (4) 5 to 9.99 acres and (5) 10 acres and above. Eight households were then selected, also circular systematically with a random start, after arranging the households

belonging to the different groups in a continuous manner. In the urban sector also, two sub-strata of households were formed in each sample block. In all the cities with population 10 lakhs or more, households with Rs. 1000/- or more as monthly per capita expenditure (MPCE) constituted sub-stratum 1 and the remaining households constituted sub-stratum-2. On the other hand in the towns with population less than 10 lakhs, sub-stratum 1 consisted of households with Rs. 800/- or more as MPCE and the rest constituted sub-stratum-2. For selection of the sample households, all the households of sub-stratum-2 were first grouped into four means of livelihood classes namely (a) self-employed; (b) regular wage/salary earning, (c) casual labour and (d) others. The households of the groups (a) and (b) were again re-grouped as belonging to three monthly per capita expenditure levels - (i) less than 'A', (ii) 'A' to 'B' and (iii) above 'B' where A and B were the MPCE cutoff levels obtained separately for each state and union-territory such that the population with MPCE less than A, A to B and above B respectively constituted of approximately the lowest 30 percent, the middle 60 percent, and the top 10 percent. The sample households were then selected after arranging the households belonging to the different groups in a specified manner. In the blocks belonging to the strata consisting of affluent area, 4 sample households were selected from sub-stratum-1 and 6 households from sub-stratum-2. In the blocks belonging to the remaining strata, 2 households were selected from sub-stratum-1 and 8 households from sub-stratum-2. The required number of sample households were selected circular systematically with a random start separately from each sub-stratum.

**2.7 Survey period and sub-rounds :** The field work for the survey was started in the month of July 1987 and completed in June 1988. The entire survey period of one year was divided into four sub-rounds of three months duration each coinciding approximately with the four seasons. The four sub-round periods were as follows :

Sub-round 1	: July '87 - September '87
Sub-round 2	: October '87 - December '87
Sub-round 3	: January '88 - March '88
Sub-round 4	: April '88 - June '88

The samples were distributed over the four sub-rounds in a manner so as to provide equally valid estimates for the country for each of the sub-round periods separately.

**2.8 Sample size:** In all, the survey finally covered in combined sample about 1 lakh 28 thousands households spread over about 8 thousands sample villages and 5 thousand sample blocks. Statement 0 gives the distribution of sample villages/blocks allotted and surveyed and the number of sample households and persons surveyed for each state and unionterritory.

STATEMENT 0 : NUMBER OF VILLAGE/BLOCKS ALLOTTED AND SURVEYED

### 2.9 Estimation procedure :

The estimation procedure adopted in the NSS 43rd round is based weighted sum of the sample values. Denoting by  $\hat{Y}$  the unbiased estimate of  $Y$  (the state/region total of any variate), it is given by :

$$\hat{Y} = \sum_s \frac{p_s}{n_s} \sum_{i=1}^{n_s} \frac{D_{si}}{C_{si}} \sum_{k=1}^2 \frac{H_{sik}}{h_{sik}} \sum_{j=1}^{h_{sik}} Y_{sikj} \dots$$

For the rural sector except Arunachal Pradesh :

$$\hat{Y} = \sum_s \frac{N_s}{n_s} \sum_{i=1}^{n_s} \sum_{k=1}^2 \frac{H_{sik}}{h_{sik}} \sum_{j=1}^{h_{sik}} Y_{sikj} \dots$$

For rural Arunachal Pradesh :

$$\hat{Y} = \sum_s \frac{N_s}{n_s} \sum_{i=1}^{n_s} D_{si} \sum_{k=1}^2 \frac{H_{sik}}{h_{sik}} \sum_{j=1}^{h_{sik}} Y_{sikj} \dots$$

For the urban sector :  $s$ ,  $i$ ,  $j$  and  $k$  are suffixes for stratum, village/block and sub-stratum respectively;  $P_s$ ,  $N_s$  and  $n_s$  give the stratum values of selection population, number of villages/blocks in the frame number of sample villages/blocks respectively;

$D_{si}$ ,  $C_{si}$ ,  $p_{si}$  stand for number of hamlet-groups/sub-blocks formed, number of census villages contained in a revenue village actually surveyed and the selection population of the sample village respectively;  $H_{sik}$  and  $h_s$  stand for the total number of households listed and the number of sample households respectively and  $Y_{sikj}$  is the observed value of the variate at a sample household.

2.10 Estimates of ratios : The estimate of a ratio of the form :

$R = Y/X$  when  $X$  and  $Y$  are the population totals of two characteristics is given by

$$\hat{R} = \hat{Y}/\hat{X}, \text{ where } ..$$

$\hat{Y}$  &  $\hat{X}$  are obtained using the formula already given at the level at which  $\hat{R}$  is required. That is to say if  $R$  is required at state level,  $\hat{Y}$  and  $\hat{X}$  are first obtained at state level and then  $\hat{R}$  will be obtained by division. Examples of ratios are rates and percentages.

2.11 Sub-sample and sub-round estimates : The estimates of aggregates of a given sub-sample/sub-round are computed using the same formulae as given above with the only modification that the tabulation is restricted to the sample f.s.u's of that sub-sample/sub-round. The value of  $n_s$  to be used in this case is the number of f.s.u's of the sub-sample/sub-round in question available for tabulation. The combined sample estimate of aggregate is based on the whole sample and not computed as the average of the sub-sample/sub-round estimates.

2.12 Reference period : The reference period for the collection of data on all items of household consumer expenditure was last 30 days preceding the date of enquiry. For items like clothing, footwear and durable goods, data were collected simultaneously for last 30 days and 365 days preceding the date of enquiry.

SECTION THREE  
CONCEPTS AND DEFINITIONS

3.0 The concepts and definitions followed in the consumer expenditure enquiries continued to remain broadly the same as in the earlier NSS rounds. Some of these concepts and definitions are described below.

3.1 Household : A group of persons normally living together and taking food from a common kitchen constitute a household. A boarding house, a hostel or a hotel is treated as a cluster of households, where each individual boarder ~~with his dependents and guests~~ forms a household. Households fed directly by some institutional bodies such as those in prisons, police quarters, cantonments, hospitals, asylums, relief camps are, however excluded from the scope of the survey. Floating population having no normal place of residence and foreign nationals households are also excluded.

3.2 Household members : Any person who is a normal resident of the sample household is considered to be a member of the household. Household members are grouped into three categories viz., adult male; adult female and child. One who has already attained the age of 15 (in completed years) is considered as an adult. Any person who usually lives and takes the principal meals with the household is considered a member of the household.

3.3 Household size : The total number of members (as defined above) in a household is considered to be the size of the household.

3.4 Household consumer expenditure : The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. The household consumer expenditure is the total value of consumption of various groups of items, namely (i) food, pan (betel leaves) tobacco, intoxicants and fuel & light, (ii) clothing and foot-wear and (iii) miscellaneous goods and services and durable articles.

For groups (i) and (ii), the total value of consumption is derived by aggregating the monetary value of goods actually consumed during the reference period. An item of clothing and footwear would be considered to have been consumed, if it is brought into maiden or first use during the reference period. The consumption may be out of (a) purchase made during the reference period or earlier ; (b) home grown stock ; (c) receipt ~~XXXXXXXXXXXXXXXXXXXXXXXXXXXXXX~~ in exchange of

of goods and services; (d) any other receipt like gift, charity, borrowing and (e) free collection. For evaluating the consumption of the items of group (iii) i.e. items categorised as miscellaneous goods and services and durable articles, a different approach is followed. In this case, the value of actual purchase, i.e. the expenditure made during the reference period for the purchase of goods and services is considered as consumption.

It is pertinent to mention here that the consumer expenditure of a household on food items relate to the actual consumption made by the normal resident members of the household and also by the guests during ceremonies or otherwise. To avoid double counting, transfer payments like charity, loan, advance etc., made by the household are not considered as consumption for items of groups (i) and (ii), since transfer receipt of those items have been taken into account. However, the item "cooked meals" is an exception to the rule. Meals prepared in the household kitchen and provided to the employees and/or others would automatically get included in domestic consumption of employer (payer) household. There is a practical difficulty of estimating the quantities and values of individual items used for preparing the meals served to employees or to others. Thus, to avoid double counting, cooked ~~meals~~ meals received as perquisites from employer household or as gift or charity are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for the consumption of the normal resident members or for the guests and employees will also be recorded in the purchaser household. This procedure of recording cooked meals served to others in the expenditure of the serving households only leads to biasfree estimates of average per capita consumption as well as total consumer expenditure. However, as the proportions of donors and recipients of free cooked meals are likely to vary in opposite directions, over the expenditure classes, the nutritional intake derived from the consumer expenditure survey data may present a somewhat distorted picture. These derived nutrition intakes may get inflated for the rich (net donors) and somewhat understated for the poor (net recipients). This point has to be kept firmly in mind while using the NSS consumer expenditure data for any nutritional study.

3.6 Monthly per capita expenditure (MPCE) : The total consumer expenditure of a household divided by the household size is taken as the monthly per capita expenditure (MPCE) of the household.

3.7 Monthly per capita expenditure class : The households and person are classified according to their monthly per capita expenditure. The expenditure classes (in rupees) have been arranged in ascending order of their magnitudes. The derived MPCE levels are grouped into 12 classes. For presentation of the 43rd round results, the grouping formulated on the basis of a trial tabulation of the NSS' 43rd round data, ~~have been~~

The groups were formulated in such a way as to obtain approximately 5 percent of the population each in the first two and the last two classes and 10 percent each in the middle eight classes. Such a formulation has led to different expenditure classes for rural and urban areas.

The MPCE classes for rural areas are :

srl. no.	monthly per capita expenditure (MPCE) class (in rupees)	srl. no.	monthly per capita expenditure (MPCE) class (in rupees)
(1)	(2)	(1)	(2)
1	less than 65	7	140 - 160
2	65 - 80	8	160 - 180
3	80 - 95	9	180 - 215
4	95 - 110	10	215 - 280
5	110 - 125	11	280 - 385
6	125 - 140	12	385 & above
		13	all classes

The MPCE classes for urban areas are :

srl. no.	monthly per capita expenditure (MPCE) class (in rupees)	srl. no.	monthly per capita expenditure (MPCE) class (in rupees)
(1)	(2)	(1)	(2)
1	less than 90	8	255 - 310
2	90 - 110	9	310 - 385
3	110 - 135	10	385 - 520
4	135 - 160	11	520 - 700
5	160 - 185	12	700 & above
6	185 - 215		
7	215 - 255		

It has been decided that once in every five years, the MPCE classes will be objectively formulated on the basis of trial tabulation of the quinquennial round data. These classes will be retained for the subsequent four annual rounds with a view to studying the shift in the distribution of the population. As the classes are different for the rural and urban areas, it becomes difficult to combine the rural and urban results or compare the rural distribution with the urban distribution.

Monthly per capita expenditure (MPCE) is however computed based on data of all items collected with a moving reference period of last 30 days preceding the date of enquiry which may be considered as unadjusted estimates of MPCE. When these estimates of MPCE are computed with a moving reference period of last 365 days preceding the date of enquiry which may be considered as unadjusted estimates of MPCE are computed with a moving reference period of last 365 days preceding the date of enquiry for items of clothing, footwear and durable goods and for other items on the basis of last 30 days, the estimates are termed as adjusted estimates of MPCE.

Contd....

SECTION FOUR

SUMMARY FINDINGS

4.0 An attempt has been made in this section to bring into focus some important features thrown up by the results obtained using the two reference periods adopted for the collection of information on semi-durable and durable goods. The variation over the different states/u.ts in the household consumer expenditure per person worked out by adopting the two moving reference periods of 30 days and 365 days on different items of clothing, footwear and durable goods, and its impact on the distribution of households before and after adjustment of the monthly per capita expenditure (MPCE), taking into account the annual expenditure on these items adjusted for the month, instead of the monthly expenditure on them are discussed in the following paragraphs. The term major states used refers to the following 15 states of India : Andhra Pradesh, Assam, Bihar, Gujarat, Haryana, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Orissa, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal.

Consumption of clothing, footwear and durable goods :

4.1 Statements IR and IU give the values of consumption of clothing, footwear and durable goods per person for a period of 30 days and 365 days for rural and urban sectors respectively of all the states/u.ts and all-India. For better comparison, total consumer expenditure on clothing, footwear and durable goods put together based on both the month and the year as reference periods are also shown in the statements. Among the major states of rural India, the highest and lowest values of monthly per capita consumption on clothing based on the reference period of 30 days xxxxxxxx

29. Goa, Daman & Diu	4.31	1.82	12.30	252.33	37.81	158.27	221.16	448.41
30. Lakshadweep	9.99	2.62	8.55	266.17	29.77	93.31	253.92	389.25
31. Pondicherry	10.40	1.64	4.02	130.32	11.05	71.16	192.72	212.53
32. All-India	14.43	2.66	10.09	223.47	31.32	112.89	326.16	367.68

is observed in Haryana (Rs. 19) and Gujarat (Rs. 5) respectively as against the all-India average of Rs. 11. In fact, there is a lot of variation in the monthly per capita consumption on clothing even among the major states. On the other hand, for the reference period of 365 days the per capita consumption is observed highest in Punjab (Rs. 268) and lowest in Orissa (Rs. 98) as against an average Rs. 142 at the all-India level.

4.2 The pattern in the urban sector is observed to be somewhat different. Among the major states the value of consumer expenditure on clothing for 30 days is highest in Assam (Rs. 23) and lowest in Gujarat (Rs. 8) as against an all-India urban average of Rs. 14 whereas that based on 365 days is highest in Haryana (Rs. 313) and lowest in Bihar (Rs. 157) as against Rs. 223 at all-India level.

4.3 The changes in the values of consumer expenditure between the period of 30 days and 365 days on footwear, as observed in statements IR and IU are to some extent, uniform for both rural and urban sectors at all-India level. During the period of 30 days, the highest value of consumption is reported by Punjab (Rs. 6 for both rural & urban) and the lowest by Orissa (Rural : Rs. 0.57, Urban : Rs. 1.55), as against all-India rural : Rs. 1.57 and urban : Rs. 2.66. The corresponding values for 365 days, xxxxxxxxxxxxxxxxxxxxxxxxx

the highest is reported by Punjab for both rural (Rs.49) and urban (Rs.59) areas whereas the lowest is reported by Orissa (Rs.6) in the rural area and Tamil Nadu (Rs.15) in the urban area. The all-India average value of consumption on footwear for a period of 365 days is Rs. 16 for rural sector and Rs.31 for urban sector. The variation of the estimated expenditure on footwear of 30 days among the major states are a little higher in rural sector than that of the urban sector and the same is also true for the estimated expenditure for 365 days, of course with less intensity.

4.4 Expenditure on domestic durable goods for first hand purchase including construction and repairs has been considered as value of household consumption which is presented in cols. (4) & (7) of statements IR & IU for all the states/u.ts. and all-India. It may be seen that Punjab reported highest expenditure on durable goods based on both 30 days (Rs.10) and 365 days (Rs.141) in the rural sector whereas in case of urban sector the highest reporting states are Andhra Pradesh (Rs.14) for 30 days and Tamil Nadu (Rs.256) for 365 days, Gujarat (Rs.17) and Assam (Rs. 3) are the lowest reporting states for a period of 30 days for rural & urban areas respectively. On the other hand, the lowest expenditure for 365 days is reported by Bihar for both rural (Rs.26) and urban (Rs.41) sectors. There are large variations among the major states in respect of the expenditure on durable goods for both rural and urban sectors. The ratios of monthly and yearly estimates of major states are less variant in rural sector as compared to urban sector.

4.5 Total annual expenditure on clothing, footwear and durable goods have been estimated based on the reference periods of 30 days and 365 days and presented in cols.(8) and (9) respectively of statements IR and IU. The total expenditure on all items of clothing, footwear and durable goods based on reference periods of 30 days as well as 365 days are almost same for Bihar, Kerala, Madhya Pradesh, Orissa, Tamil Nadu and West Bengal among the major states and all-India in rural sector. But in other major states there are significant variation considering both positive and negative together, the highest variation is observed in Gujarat (Rs.121) followed by Andhra Pradesh (Rs.62), Assam (Rs.54), Punjab (Rs.53), Karnataka (Rs.41), Maharashtra (Rs.32), Haryana (Rs.27) and Rajasthan (Rs.25). The absolute variation as observed in Statement IU from cols.(8) and (9) is more prominent in urban areas. The extent of variation in expenditure as observed is the highest in Gujarat (Rs.185) and the lowest in Bihar (Rs.6). The estimates obtained from the reference period of 365 days reveal that about half of the major states like Andhra Pradesh, Bihar, Haryana, Kerala, Maharashtra, Rajasthan, Tamil Nadu & Uttar Pradesh for rural sector and five states like Andhra Pradesh, Assam, Bihar, Karnataka & Maharashtra for urban sector have given estimates which are lower than those obtained on the basis of 30 days reference period, whereas almost half of the states in rural sector and two-third in urban sector of major states given an opposite trend. The pattern of movement of these consumer expenditure in the major states of urban sector due to inclusion of longer reference period is as expected since the urban population are comparatively well-off and may like to purchase more of semi-durable and durable goods for their consumption basket and in smaller reference period these items may not be purchased so much due to inherent infrequent nature of purchase of all these items.

Households (percentage) reporting consumption of clothing,  
footwear and durable goods in rural and urban sectors

4.6 The proportion of households reporting consumption of clothing, footwear and durable goods for a period of 30 days and 365 days by states and union territories both for rural and urban sectors are presented in statements 2R and 2U respectively. It appears from the statements that in rural sector at all-India level 30 days reference period includes nearly one-third(32%) of the total households reporting consumption of clothing whereas 365 days reference period include almost all(98%) the households. In respect of consumption of footwear, 30 days reference period includes one-fifth(20%) of the total households while 365 days reference period covers slightly more than four-fifth(82%) of the total households. Similarly, for the consumption of durable goods, 30 days reference period covers nearly one-fifth(18%) but 365 days reference period only covers almost three-fifth(58%) of the total households. The trend is almost same for all three items in urban sector at all-India level. From these it may be pointed out that since the incidence of purchase on semi-durable and durable goods are less frequent, households reporting consumption for them are also less with the smaller reference period. While examining the proportion of rural households reporting consumption of clothing at the state level, it is observed that the percentage of households for 30 days and 365 days remains almost same for about half of the major states. For Madhya Pradesh, Orissa, Rajasthan, Uttar Pradesh and West Bengal, the ratio of the percentage of households with respect to month and year reference period is higher whereas Gujarat, Karnataka and Tamil Nadu, the ratio is lower than that of all-India.

4.7 The situation is almost same in case of major states of urban sector. For almost half of the major states the ratio of proportion household reporting consumption of clothing with month and year reference periods is more or less same as that of all-India. But in states like Andhra Pradesh, Gujarat, Karnataka and Maharashtra the ratio is much lower whereas in Kerala, Orissa, Punjab and West Bengal the ratio is higher compared to that of all-India.

**STATEMENT 2R : PROPORTION (%) OF ESTIMATED NUMBER OF HOUSEHOLD REPORTING CONSUMPTION OF CLOTHING, FOOTWEAR AND DURABLE GOODS FOR A PERIOD OF (i) 30 DAYS AND (ii), 365 DAYS BY STATE/U.T.**

sd

4.8 In most of the major states the ratios for the households reporting consumption of footwear with respect to month and year reference period are more fluctuating compared to that of all-India. This is equally true in both rural and urban sectors. But in the case of durable goods, such ratios are not so much fluctuating. The variation of ratios in the major states as compared to that of all-India are almost similar in rural and urban sectors.

Upward and downward shifting of households after adjustment due to reference period

4.9 The statements 3R & 3U give the percentage of households showing (i) no movement, (ii) movement upwards (i.e., movement to higher expenditure classes), and (iii) movement downward (i.e., movement to lower expenditure classes) after adjustment using household consumption for semi-durable and durable goods with a reference period of 365 days in rural and urban India respectively. In addition, percentage of household moving to the adjacent classes (immediately one class lower or upper than the MPCE classes to which they belong) after adjustment are also shown in these statements.

4.10 It is seen that the percentage of households moving upwards due to adjustment is quite significant in both rural and urban sectors at all-India level. Initially the percentage of households moving towards higher expenditure classes after adjustment increases with rise in per capita expenditure levels and it continues at certain mid-level of expenditure classes and then decreases with further rise in expenditure level which is true for both rural & urban sectors. Contrary to this, the percentage of households showing downwards movement gradually increases with the rise of per capita expenditure levels and continues upto the end in both rural and urban sectors. Thus it may be stated that the extent of displacement towards upper expenditure classes after adjustment is more prominent among the households belonging to lower MPCE classes than those belonging to upper MPCE classes. On the other hand, the extent of displacement towards lower expenditure classes due to adjustment is more pronounced among the households of upper MPCE classes. So one may conclude that since the incidence of purchase of these semi-durable and durable goods are more among the richer households, the movement towards the higher expenditure classes is less in richer households as compared to poorer households.

STATEMENT 4 : UNADJUSTED AVERAGE MPCE (Rs.) , ADJUSTED AVERAGE NCPE (Rs.) ,  
 AMOUNT OF ADJUSTMENT AND PERCENTAGE INCREASE/DECREASE  
 DUE TO ADJUSTMENT FOR RURAL AND URBAN SECTORS.

90	74	4.7	6.2	75	3.6	4.7
90 - 110	101	5.6	7.4	101	4.7	6.1
110 - 135	122	9.7	12.0	123	8.7	10.9
135 - 160	147	10.4	12.2	148	10.1	12.1
160 - 185	172	9.2	10.4	172	9.7	10.7
185 - 215	199	9.5	10.2	200	10.0	10.6
215 - 255	234	10.7	10.8	234	10.8	11.0
255 - 310	280	10.3	9.5	280	11.5	10.7
310 - 385	344	10.0	8.0	344	10.5	8.8
385 - 520	441	9.8	7.0	440	10.6	7.8
520 - 700	595	5.5	3.5	595	5.8	3.8
700	1125	4.6	2.8	1017	4.4	2.7

4.11 It is further seen from statements 3R & 3U that the extent of displacement is highly concentrated to the adjacent MPCE classes rather than to more distant classes. This feature is indicative of the fact that the effect of adjustment due to longer reference period causes displacement of the household mainly around the classes adjacent to the MPCE classes to which they belong.

Comparison of MPCE before and after adjustment

4.12 Statement 4 gives the unadjusted average MPCE, adjusted average MPCE, amount of adjustment and percentage increase/decrease due to adjustment of annual expenditure on clothing, footwear and durable goods for all the states/uts and all-India. It is seen that there is a marginal increase of average MPCE after adjustment for all the major states except Andhra Pradesh, Haryana, Maharashtra, Rajasthan and Uttar Pradesh in the rural sector and Andhra Pradesh, Assam and Tamil Nadu in the urban sector where the average MPCE decreases marginally due to adjustment. Moreover, the extent of increase or decrease in average MPCE appears to be ~~normal~~ for all the major states of both rural & urban sectors except Gujarat, Haryana and Kerala as well as all India where the extent of increase in average MPCE is more in urban than in rural area. At all-India level there is no effect on average MPCE due to adjustment in the rural sector whereas a marginal increase of Rs.2 only on the average MPCE is recorded due to adjustment in the urban sector.

4.13 From the statements 3R & 3U it is seen that due to the adjustment of total expenditure (substituting last month's expenditure by last year's expenditure on clothing, footwear and durable goods) there is an upwards movement of households in the lower expenditure classes while the movement of the upper expenditure classes is downwards. This has altered the distribution of households and population by per capita expenditure which is apparent from the two distribution (unadjusted and adjusted) given in the statement - 5. This is also evident from the actual values of the concentration ratio calculated for the unadjusted and adjusted total value of consumption for the rural and urban sectors at all-India level.

The values of concentration Ratios (Korenz Ratios) are presented below in statement - 6.

STATEMENT 6 : CONCENTRATION RATIO FOR UNADJUSTED AND ADJUSTED  
- - - DISTRIBUTION FOR RURAL & URBAN SECTORS AT ALL-INDIA  
LEVEL

distribution	concentration ratio	
	rural	urban
(1)	(2)	(3)
unadjusted	0.29661	0.34656
adjusted	0.27258	0.32682

The concentration curves are given in figures 1 & 2 for rural and urban sectors respectively.

Figure 1 : Concentration curve of total consumption expenditure before and after adjustment due to reference period for all-India : RURAL

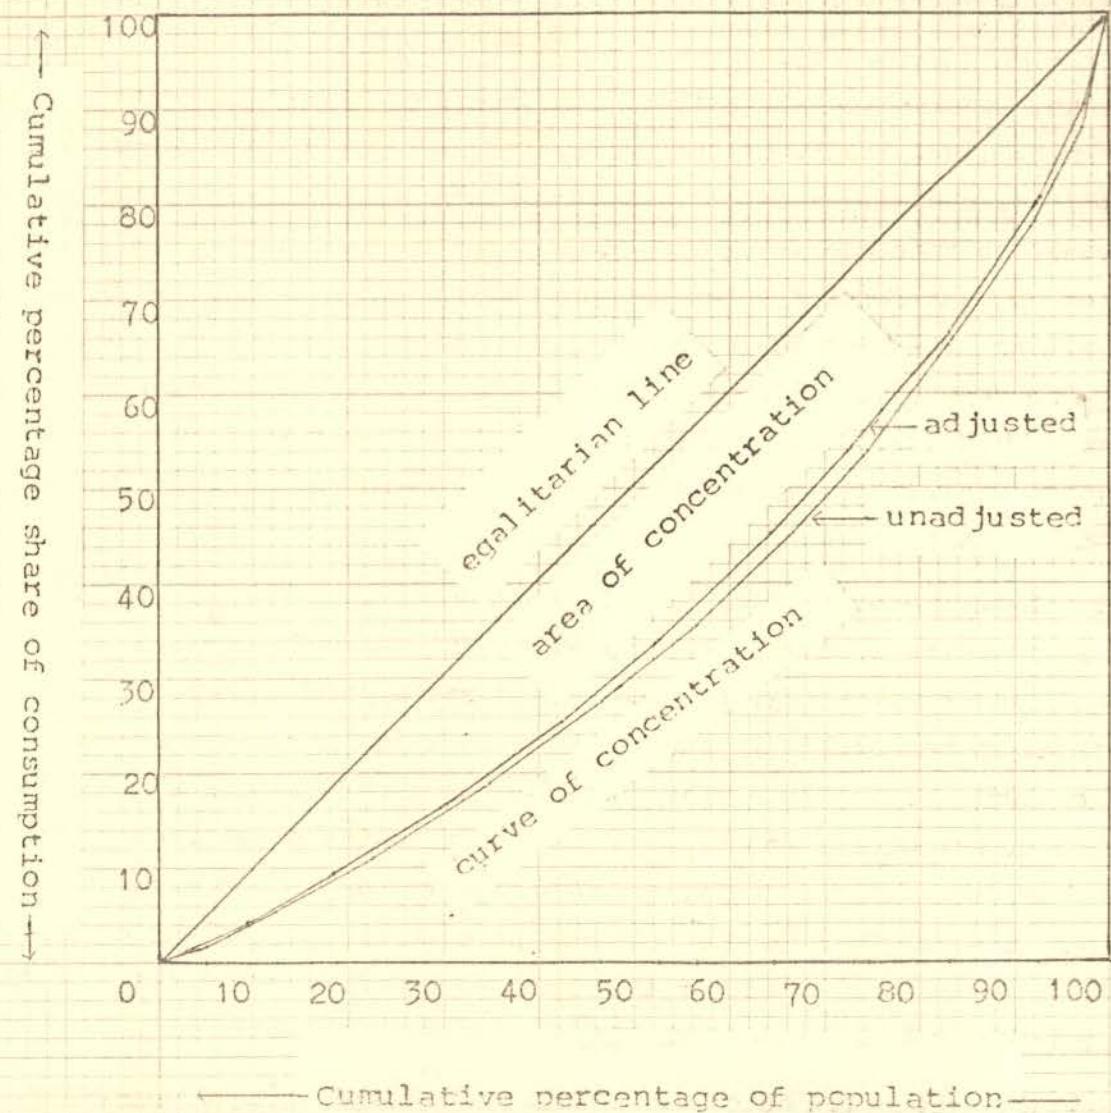

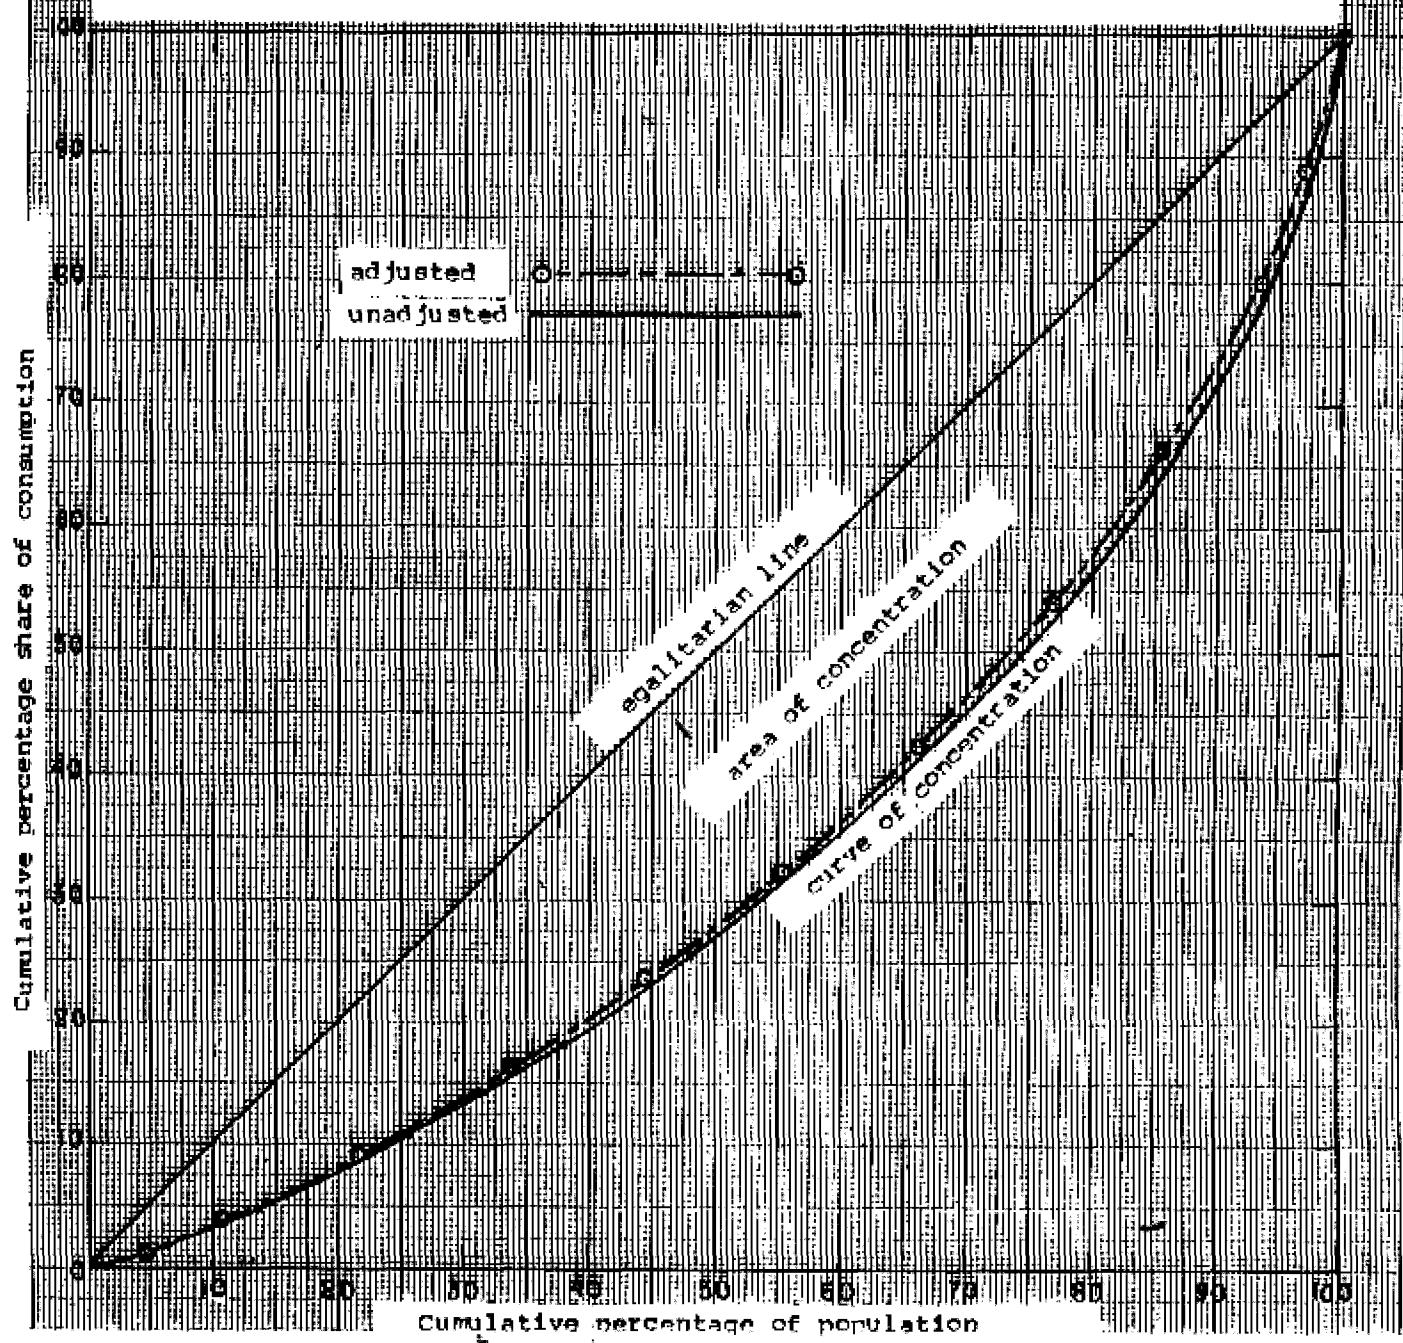

Figure 2 : Concentration curve of total consumption expenditure before  
and after adjustment due to reference period for all-India :

APPENDIX - II

A FACSIMILE OF THE SCHEDULE 1.O CANVASSED IN NSS  
43RD ROUND IS GIVEN IN THIS APPENDIX

## NATIONAL SAMPLE SURVEY ORGANISATION

SOCIO-ECONOMIC SURVEY : JULY 1987-JUNE 1988

RURAL - 1	*
URBAN - 2	

## HOUSEHOLD SCHEDULE I.C CONSUMER EXPENDITURE

FORTYTHIRD ROUND

**I/ identification of sample household**

1. serial number	13. hamlet(s) surveyed.....
2. state-region	14. ward-iv, unit block/ward-charge, circle block
3. stratum	15. house number
4. sub-sample	16. name of head.....
5. sample village/block no.	17. sex of head(male-1, female-2)
6. sub-round	18. name of primary informant.....
7. sub-stratum	19. survey sequence-(first-1, second-2)
8. sample household no.	20. informant code(a)
9. state/u.t. ....	21. type of informant code(b)
10. district .....	22. survey code(c)
11. tehsil/town .....	23. reason for casualty code(d)
12. name of village .....	

**II/ particulars of field operations**

item (1)	investiga- tor (2)	assistant superintendent			superinten- dent (5)
		field supervision (3)	table scrutiny (4)		
1. name					
2. date(s) of : survey/inspection/ scrutiny					
3. receipt	X				
4. duplication		X	X	X	
5. despatch					
6. name of addl. schs/ sheets attached		X	X	X	
7. signature					

## (a) informant code (item 20)

head of household - 1

other member of h.h. - 2

others - 9

## (c) survey code (item 22)

original household surveyed - 1

substitute household surveyed - 2

nothing surveyed - 3

## (b) type of informant code (item 21)

co-operative and capable - 1

co-operative but not capable - 2

busy - 3, reluctant - 4, others - 9

## (d) reason for casualty code (item 23)

informant busy - 1

members away from home - 2

others - 9

Informant non-co-operative - 3

\* record the appropriate code in the box space.

23.17 household characteristics

1. size		12. owned	
2. principal industry-occupation code(s) description .....	land cultivated (area in hectares 0.00)	13. leased-in	
3. type code (f)		14. neither owned nor leased-in	
4. religion code (g)		15. total cultivated (12 + 13 + 14)	
5. group code (h)	use of hired labour for	17. crop production code (i)	
6. homestead type (owned-1, others-9)		18. other productive enterprises code (j)	
Land (area in hectares 0.00)	7. owned	19. per capita expenditure last month (Rs. 0.00)	
	8. leased-in	20. primary source of energy for cooking code (k)	
	9. neither owned nor leased-in	21. primary source of energy lighting code (l)	
	10. leased out		
	11. total possessed (7 + 8 + 9 - 10)		

(e) item 2 : principal industry-occupation codes are as in NIC-1970 and NCO-1968.

(f) item 3 : type for rural areas :

self-employed in non-agriculture-1, agricultural labour -2, other labour -3, self-employed in agriculture -4, others -9.

for urban areas :

self-employed -1, regular wage/salary earning-2, casual labour-3, others -9.

(g) item 4 : religion :

Hinduism-1, Islam-2 Christianity-3, Sikhism-4, Jainism-5, Buddhism-6, Zoroastrianism-7, others-9.

(h) item 5 : group :

scheduled tribe -1, scheduled caste -2, neo-buddhist -3, others -9.

(i) item 17 : use of hired labour for crop production : hires labour regularly-1, during peak seasons only-2, casually-3, hires no labour for crop production-4, no crop production-5.

(j) item 18 : use of hired labour for other productive enterprises :

hires labour : regularly-1, during peak seasons only-2, casually-3, hires no labour for other productive enterprises-4, no other productive enterprise-5.

(k) item 20 : primary source of energy for cooking :

coke, coal-1, fire wood and chips-2, gas (coal, oil or natural) -3, gobar gas-4, dung cake-5, charcoal-6, kerosene-7.

(l) item 21 : primary source of energy for lighting : kerosene-1, other oil-2, gas-3, candle-4, electricity-5, others-9.

3.2 Other household characteristics

1. during the last agricultural year did the household grow/cultivate (yes-1, no-2)	31. does the household possess milch animals (cows-1, buffaloes-2, both cows and buffaloes-3, other-9, none-0)
11. rice	61. does the household possess any draught animal (a pair or more-1, single-2, none-0)
12. wheat	71. did the household purchase any commodity from ration/fair price shop during last 30 days (yes-1, no-2)
13. jowar	8. did any member of the household consume during the last 30 days (yes-1, no-2)
14. bajra	81. alcoholic beverages
15. maize	fruits
16. barley	82. bananas
17. ragi	83. mangoes
18. gram	84. citrus fruits
21. did any member of the household work for at least 60 days on public works during last 365 days (yes-1, no-2)	85. apples
3. during the preceding 365 days did the household receive any income from (yes-1, no-2)	86. grapes
31. cultivation	87. others
32. fishing/other agricultural enterprise	9. did any member of the household make a journey during the last 30 days (yes-1, no-2)
33. wage/salarised employment	by train for
34. non-agricultural enterprises	91. work (domestic account)
35. pension	92. education
36. remittances	93. others (not related with economic activity)
37. interest and dividends	by bus for
38. others	94. work (domestic account)
41. did the household receive any assistance during the last 5 years from IRDP (code)*	95. education
*yes : milch animal-1, draught animal-2, sheep/goat-3, pump sets-4, fish pond-5, sewing machine-6, others-9, no-0	96. others (not related with economic activity)

Q.37 ceremonies performed and meals served by the household during the last 30 days ended on .....

1. whether any ceremony was performed by the household during the last 30 days (yes-1, no-2)	3. number of meals (other than those served during ceremony) served
2. if yes in 1, details of ceremonies performed	

serial number of ceremony	ceremony		number of meals served to guests	srl. no.	type	code	no.of meals serve
	(1)	(2)	(3)	(4)	(1)	(2)	(3)
1.				1.	guest	6
