

32. ACCIDENT STATISTICS

This section presents data relating to accidental deaths and suicides in India. The source for these data is the National Crime Records Bureau(NCRB),Ministry of Home Affairs, which obtains information from Police Authorities in different States.The NCRB from the year 1995 has started collecting data in modified input form and therefore the format of the presentation of data has been changed as per the format of Statistical compilation of the NCRB. The older series have also been discontinued. Regarding data prior to 1997, the Statistical Abstract India 1999 and its earlier issues may be referred to.

Table 32.1(a+b)

This table shows the incidence of accidental deaths in different States, Union Territories and important cities. The causes of accidents have been classified into two broad categories viz. (i) natural causes such as lightening, heat stroke, landslide, etc. and (ii) accidents due to unnatural causes such as mishaps in factories, air crash, railway accident etc.

Table 32.2 (a+b)

This table presents statistics of suicidal deaths classified according to sex and age-group and also by causes of suicides. Among the causes of suicides, despair due to dreadful diseases, quarrel between married partners and with parents-in-law, and love affairs are some of the major causes.
