

CHAPTER SEVEN

Human Settlements

7.1 Introduction

7.1.1 The rapid population growth and economic development in country are degrading the environment through the uncontrolled growth of urbanization and industrialization, expansion and intensification of agriculture, and the destruction of natural habitats. One of the major causes of environmental degradation in India could be attributed to rapid growth of population, which is adversely affecting the natural resources and environment. The growing population and the environmental deterioration face the challenge of sustained development without environmental damage. The existence or the absence of favorable natural resources can facilitate or retard the process of economic development. The three fundamental demographic factors of births, deaths and migration produce changes in population size; composition, distribution and these changes raise a number of important questions of cause and effect. India has approximately 18 per cent of the world population but only 2 per cent of the geographical area.

The Country's population growth can be assessed from the table 7.1.1 .

7.1.2 Human development is also adversely affected by the environmental degradation. Two of the environmental indicators, viz. access to the safe drinking water and the sanitation are closely linked with two of the very important human development indicators, viz. an infant mortality rate and the life expectancy. Polluted air and poor and unhygienic conditions in settlements contribute to reduction in life expectancy and increase in infant mortality.

7.1.3 Life expectancy at birth in India since 1901 is given in table 7.1.2 . In India, the expectation of life at birth of female which was lower than that of male till 1980 and has shown a reverse trend thereafter (table 7.1.2)

Table 7.1.1: Population Totals - India and States

(Numbers)

Sl. No.	States/U.Ts.	1981		1991		2001		2011

+ : The 1991 Census was not held in Jammu & Kashmir. 1991 Census figures include interpolated Population of Jammu & Kashmir.

++ : The States of Uttarakhand, Jharkhand and Chhattisgarh are carved out from Uttar Pradesh, Bihar, and Madhya Pradesh respectively, in 2001 Census. In 1991 the recasted figures for these States are given as per jurisdiction of 2001 Census.

1 - : India and Manipur figures include estimated figures for those of the three sub-divisions viz. Mao Maram, Paomata and Purul of Senapati district of Manipur as population Census 2001 in these three sub-divisions were cancelled due to technical and administrative reasons.

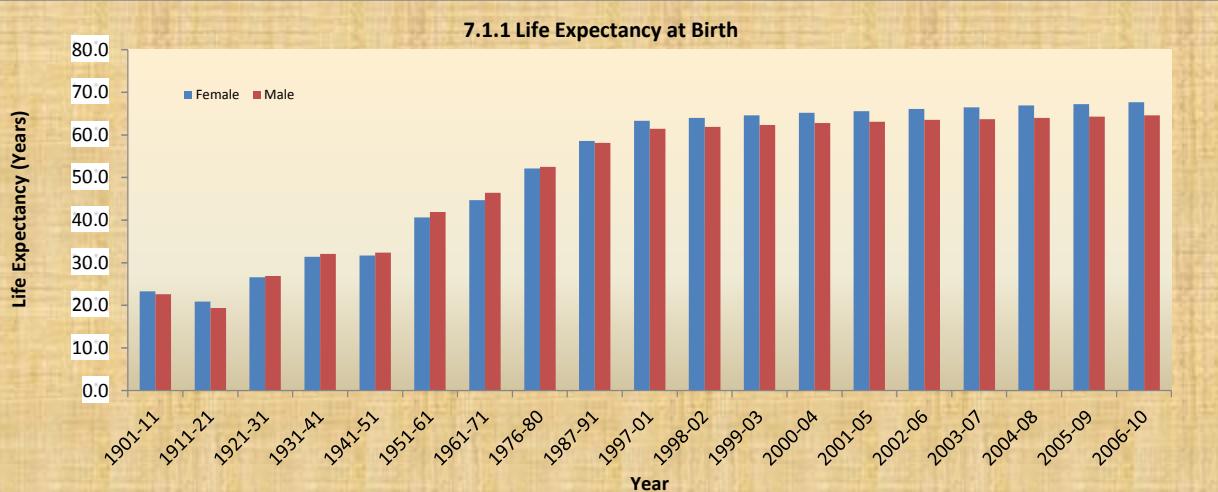

. * : The figures for India and Manipur, exclude the population of Mao Maram, Paomata and Purul sub-divisions of Senapati district of Manipur for Census 2011 due to administrative reasons.

* : Excludes Jammu and Kashmir due to non-receipt of returns.

** : Excludes Nagaland (Rural) due to part-receipt of returns.

7.1.6 Poverty indicates a condition in which a person fails to maintain a living standard adequate for a comfortable lifestyle. In rural India, nearly 25.7%, and in urban India 13.7% population (2011-12 estimates) are below the poverty line. The details are depicted in **Tables 7.1.4 a, 7.1.4 b & 7.1.4 c**.

* URP- Uniform Reference Period : MRP- Mixed Reference Period

Source : Planning Commission & NSSO (Tendulkar Methodology)

Notes : 1.The estimates for Chhattisgarh, Madhya Pradesh, Bihar, Jharkhand, UttarPradesh and Uttarakhand are for states as they exist after bifurcation in 2001. The estimates for 1993-94 have been calculated from the unit data using district and state boundaries of the divided states in 1993-94.

2 Population as on 1st March 2010 has been used for estimating number of persons below poverty line. (interpolated between 2001 and 2011 population census)

3 Poverty line of Tamil Nadu is used for Andaman and Nicobar Island.

4 Urban Poverty Line of Punjab used for both rural and urban Poverty of Chandigarh.

5 Poverty line of Maharashtra is used for Dadra & Nagar Haveli.

6 Poverty Ratio of Goa is used for Daman & Diu.

7 Poverty ratio of Kerala is used for Lakshadweep.

Notes : 1.The estimates for Chhattisgarh, Madhya Pradesh, Bihar, Jharkhand, UttarPradesh and Uttarakhand are for states as they exist after bifurcation in 2001. The estimates for 1993-94 have been calculated from the unit data using district and state boundaries of the divided states in 1993-94.

2 Population as on 1st March 2010 has been used for estimating number of persons below poverty line. (interpolated between 2001 and 2011 population census)

3 Poverty line of Tamil Nadu is used for Andaman and Nicobar Island.

4 Urban Poverty Line of Punjab used for both rural and urban Poverty of Chandigarh.

5 Poverty line of Maharashtra is used for Dadra & Nagar Haveli.

6 Poverty Ratio of Goa is used for Daman & Diu.

7 Poverty ratio of Kerala is used for Lakshadweep.

7.2.3 Though, there is a reduction in the number of homeless people in 2011 over 1991, the homeless people still constitutes 0.14% of the Country's population.

7.3 Safe water and improved sanitation facilities

7.3.1 Access to safe drinking water and proper sanitation is both a right and a basic need. It has a significant bearing on the achievements of other Millennium Development Goals including poverty reduction, and gender equality. However, despite two decades of concerted efforts by national governments and international communities, equitable access to safe drinking water supply and improved sanitation for all remains elusive. It is a pressing development issue.

7.3.2 Access to safe drinking water remains an urgent need as only 70.6% of occupied housing unit in urban areas received organized piped water supply and rest have to depend on surface or ground water which is untreated. The situation in rural areas is much worse with only 30.8% households reported water supply through Tap Water. In India, almost all surface water sources are contaminated and unfit for human consumption. The diseases commonly caused due to contaminated water are diarrhea, trachoma, intestine worms, hepatitis. Inadequate access to safe drinking water and sanitation facilities leads to infant mortality and intestinal diseases. As per Census 2011, 69.3% rural households 18.6% urban households are still without toilet of any type.

7.3.3 The details Rural –Urban classification of Households by water supply and toilet installation is in **Table 7.3.1**

TABLE 7.3.1 : HOUSEHOLDS CLASSIFIED BY SUPPLY OF WATER AND TOILET INSTALLATION BY RURAL AND URBAN

7.3.4 Water is a finite resource. Conserving water is one way of ensuring that more is available for those who do not have it. The reduction of non-revenue water in Asia (currently ranging from 25-70 per cent in most water utilities) will significantly lower capital requirements for new investments and conserve. It costs far less to reduce non-revenue water than to expand capacity and perpetuate system inefficiencies. Access can also be expanded by applying the results of research in new technologies that separate water use (e. g., for cooking, drinking, bathing, sanitation), and through natural means such as rainwater harvesting and storage. In conjunction, water quality must remain a key focus area. **The state wise estimated requirement of water for domestic purposes including for cattle is presented in Table 7.3.2 .**

7.3.5 The source of drinking water is an indicator of development towards availability of safe drinking water. **The distribution of households by major source of drinking water in rural and urban areas is exhibited in tables 7.3.3a, 7.3.3b & 7.3.3 c.**

7.3.6 Food, potable drinking water, adequate system for disposal of excreta, good sanitation and personal hygiene etc are pre – requisite to reduce prevalence of morbidity. Sewage treatment is an important initiative in this direction, however, in Indian Metropolitan cities, on an average; sewage treatment capacity is only 51% of the sewage generation. The data on this is depicted in **tables 7.3.4 a, 7.3.4 b&7.3.4 c .**

The facilities for garbage disposal in Indian households are a representative indicator of the cleanliness of its environment. The distribution of household by arrangement of garbage disposal is in **table 7.3.5.**

Source: Status of sewage treatment in India (CUPS/61/2005-06) Central Pollution Control Board

MLD: Million litre per day

Note: Information related to Sewage Generation and Treatment Capacities of Metropolitan Cities.

- Status of Municipal Wastewater Generation and treatment capacity of Metro Politian Cities.
- There are 35 metropolitan cities (more than 10 Lac populaiton), 15,644 Millions Liter Per Day (MLD) of sewage is generated from these metropolitan cities. The treatment capacity exists for 8040 MLD i.e. 51% is treatment capacity is created.
- Among the Metropolitan cites, Delhi has the maximum treatment capacity that is 2330 MLD (30% of the total treatment capacity of metropolitan cities)
- Next ot Delhi, Mumbai has the capacity of 2130 MLD, which is 26% of total capacity in metropolitan cities.
- Delhi and Mumbai therefore in combination have 55% of treatment capacity of the metropolitan cities.
- Some cities such as Hydrerabad, Vadodara, Chennai and Ludhiana and Ahmadabad treatment capacity meets the volume of generation.
- Cities like Delhi, Dhanbad have more than 50% capacity, rest of the cities have the capacity less than 50%

7.5 SLUM POPULATION

7.5.1 In India, as per 2001 Census, 640 cities/ towns are reporting slums accounting for 42.6 million people living in the slums. The total slum population is 23.1% to the total urban population in these cities.

7.5.2 The large urban cities are the centres of economic growth and contributes significantly to the GDP of the country. Cities with population above 100,000 accounts for 60 % of country's population in 2001. About 17.7 million population lives in the cities with population above one million, which is 41.6 % of the total slum population in the country. In absolute numbers, Greater Mumbai has the highest slum population of around 6.5 million followed by Delhi 1.9 million and Kolkata 1.5 million. The slum areas of Surat, Hyderabad, Chennai and Nagpur have more than half a million population each. **The data on Slum Population in India is available in Tables 7.5.1a -7.5.1 d and 7.5.2.**

Table 7.5.1 (a) : Total urban population, population of cities/town reporting slums and slum population in slum area-India, States, Union Territories- 2001

@ : Based on the percentage identified slum population of 1981.

+ : Based on the percentage identified slum population of 1991.

* : Estimated

** : Based on the no. of identified Jhuggi collected by the State Govt. in 1991-92

Note : Classification of the size of cities is based on 1991 census.

7.6 SOLID WASTE AND HAZARDOUS MATERIAL MANAGEMENT

7.6.1 The categorisation of hazardous waste viz-a-viz respective regulatory is detailed in table 7.6.1

Table 7.6.1 : Hazardous waste regulatory quantities

Waste Category (Numbers)	Types of Wastes	Regulatory Quantities
1	2	3
1	Cyanide wastes	1 kilogram per year calculated as cyanide
2	Metal finishing wastes	10 kilograms per year the sum of the specified substance 'calculated as pure metal'
3	Waste containing water soluble chemical compounds of lead, copper, zinc, chromium, nickel, selenium, barium and antimony	10 kilograms per year the sum of the specified substance 'calculated as pure metal'
4	Mercury, arsenic, thallium, and cadmium bearing wastes	5 kilograms per year the sum of the specified substance 'calculated as pure metal'
5	Non-halogenated hydrocarbons including solvents	200 kilograms per year calculated as non-halogenated 'hydrocarbons'
6	Halogenated hydrocarbons including solvents	50 kilograms per year calculated as halogenated 'hydrocarbons'
7	Wastes from paints, pigments, glue, varnish and printing ink	250 kilograms per year calculated as oil or oil emulsions
8	Wastes from dyes and dye intermediates containing inorganic chemical compounds	200 kilograms per year calculated as inorganic chemicals
9	Wastes from dyes and dye intermediates containing organic chemical compounds	50 kilograms per year calculated as organic chemicals
10	Waste oils and oil-emulsions	1000 kilograms per year calculated as oil and oil emulsions
11	Tarry wastes from refining and tar residues from distillation or pyrolytic treatment	200 kilograms per year calculated as tar
12	Sludge arising from treatment of waste water containing heavy metals, toxic organics, oils, emulsions, and spent chemicals and incineration ash	Irrespective of any quantity
13	Phenols	5 kilograms per year calculated as phenols
14	Asbestos	200 kilograms per year calculated as asbestos
15	Wastes from manufacture of pesticides, herbicides, and residues from pesticides and herbicide formulation units.	5 kilograms per year calculated as pesticides and their intermediate products
16	Acidic/alkaline/slurry wastes	200 kilograms per year calculated as acids/alkalies
17	Off-specification and discarded products	Irrespective of any quantity
18	Discarded containers and container liners of hazardous and toxic wastes	Irrespective of any quantity

Source : Central Pollution Control Board

7.6.2 When solid waste is not collected and disposed of efficiently and effectively, it attracts rodents and flies which spread diseases. It also pollutes and degrades land and water resources. If these wastes are left untreated, they would ferment slowly and produce bio-gas which would be distributed in the atmosphere. The bio-gas contains 65-70% methane gas which is a green house gas, have a global warming potential 34 times more than that of Carbon Dioxide. Therefore, development of suitable technologies for utilization of wastes is essential to minimize adverse health and environment consequences. Comprehensive guidelines are available with Central Pollution Control Board for Toxic Waste Management including hospital wastes.

7.6.3 The State wise Status of hazardous waste generation in India can be assessed from the table 7.6.2

7.6.4 The details of quantities and waste generation rates (table 7.6.3), waste characterization (table 7.6.4) and status of landfill sites (table 7.6.5) in 59 cities as per a survey conducted by CPCB in the year 2004-05.

Table 7.7.1: Criteria for direct disposal of hazardous waste into secured landfill

Leachate Quality	Concentration	
pH	,4-12	
Total Phenols	<100	mg./l.
Arsenic	<1	mg./l.
Lead	<2	mg./l.
Cadmium	<0.2	mg /l.
Chromium-VI	<0.5	mg./l.
Copper	<10	mg./l.
Nickel	<3	mg./l.
Mercury	<0.1	mg./l.
Zinc	<10	mg./l.
Fluoride	<50	mg./l.
Ammonia	<1,000	mg./l.
Cyanide	<2	mg./l
Nitrate	<30	mg./l
Absorbable organic bound Chlorine	<3	mg./l
Water soluble compounds except salts	<10	%
Strength		
Transversal Strength (Vane Testing)	>25	KN/m ²
Unconfined Compression Test	>50	KN/m ²
Axial Deformation	<20	%
Degree of Mineralization or Content of Organic Materials (original sample)		
Annealing loss of the dry residue at 550°	C <20 Wt. % (for non-biodegradable waste) <5 Wt. % (for biodegradable waste)	
Extractable Lipophylic contents (Oil & Grease)	<4	Wt. %

Source: CPCB-2010, Hazardous waste management series/2010-11

Note:

1). leachate quality is based on water leachate test i.e. Leachability tests are conducted by preparing a suspension of waste and water i.e. taking 100 gm of waste and filling up to 1 liter with distilled water, stirring or shaking for 24 hrs, filtering the solids and analyzing the filtrate.

2) Calorific value of the land disposable hazardous waste should be less than 2500 K. Cal/Kg

Above characteristics of Leachate are typical characteristics of leachate (Ref. Datta, M. (1997)

Generation and Control of Leachate and Landfill Gas P. 90. In waste Disposal in engineering Landfill.

Narson Publishing House, New Delhi)

Tot. Dis. : Total Dissolved

Tot. kj : Total Killo joule

7.8 PLASTICS WASTE MANAGEMENT

Plastic waste has attracted widespread attention in India, particularly in the last five years, due to the widespread littering of plastics on the landscape of India. The environmental issues due to plastic waste arise predominantly due to the throwaway culture that plastics propagate, and also the lack of an efficient waste management system.

7.8.1 Plastics are difficult to destroy and are classified as non- bio degradable. The collection of such Soiled Waste including the one recycled three or even four times earlier, is not only uneconomical for recovery of material, but also unhygienic and undermines the environmental benefits of materials recycling. These indiscriminately disposed solid plastic wastes are of concern in view of causing chokage of municipal sewers, blocking of the storm water run-offs in drains particularly in hilly areas, causing deaths to many animals, like, cows which feed on the garbage food thrown in polythene bags. Stringent measures are required to be taken by the States to reduce the menace of Pollution through Plastic waste.

7.8.2. The status of management of plastic waste is depicted in table 7.8.3

Table 7.8.1 :Plastic waste management status in India

Sl. No.	Item	1995-96	2001
1	2	3	4
1	Consumption of Plastic	1889	4374
2	Waste available for recycling	800	2000
3	Total	2689	6374
